CONTENTS OF VOLUME IX OF THE BLUE BOOK

Part I – Series K Recommendations

Protection against interference

Rec. No		Page
K.1	Connection to earth of an audio-frequency telephone line in cable	3
K.2	Protection of repeater power-feeding systems against interference from neighbouring electricity lines	4
K.3	Interference caused by audio-frequency signals injected into a power distribution network	4
K.4	Disturbance to signalling	4
K.5	Joint use of poles for electricity distribution and for telecommunications	5
K.6	Precautions at crossings	5
K.7	Protection against acoustic shock	7
K.8	Separation in the soil between telecommunication cables and earthing system of power facilities	7
K.9	Protection of telecommunication staff and plant against a large earth potential due to a neighbouring electric traction line	11
K.10	Unbalance about earth of telecommunication installations	12
K.11	Principles of protection against overvoltages and overcurrents	19
K.12	Characteristics of gas discharge tubes for the protection of telecommunications installations	27
K.13	Induced voltages in cables with plastic-insulated conductors	40
K.14	Provision of a metallic screen in plastic-sheathed cables	41
K.15	Protection of remote-feeding systems and line repeaters against lightning and interference from neighbouring electricity lines	47
K.16	Simplified calculation method for estimating the effect of magnetic induction from power lines on remote-fed repeaters in coaxial pair telecommunication systems	50
K.17	Tests on power-fed repeaters using solid-state devices in order to check the arrangements for protection from external interference	72
K.18	Calculation of voltage induced into telecommunication lines from radio station broadcasts and methods of reducing interference	82

Rec. No		Page
K.19	Joint use of trenches and tunnels for telecommunication and power cables	99
K.20	Resistibility of telecommunication switching equipment to overvoltages and over-currents	100
K.21	Resistibility of subscribers' terminals to overvoltages and overcurrents	109
K.22	Overvoltage resistibility of equipment connected to an ISDN T/S bus	115
K.23	Types of induced noise and description of noise voltage parameters for ISDN basic user networks	118
K.24	Method for measuring radio-frequency induced noise on telecommunications pairs . . .	122
K.25	Lightning protection of optical fibre cables	123
K.26	Protection of telecommunication lines against harmful effects from electric power and electrified railway lines	126

Part II – Series L Recommendations

**Construction, installation and protection of
cables and other elements of outside plant**

L.1	Construction, installation and protection of telecommunication cables in public networks	129
L.2	Impregnation of wooden poles	129
L.3	Armouring of cables	130
L.4	Aluminium cable sheaths	132
L.5	Cable sheaths made of metals other than lead or aluminium	135
L.6	Methods of keeping cables under gas pressure	136
L.7	Application of joint cathodic protection	137
L.8	Corrosion caused by alternating current	138
L.9	Methods of terminating metallic cable conductors	139
L.10	Optical fibre cables for duct, tunnel, aerial and buried application	142
L.11	Joint use of tunnels by pipelines and telecommunication cables, and the standardization of underground duct plans	150

PRELIMINARY NOTES

1 The Questions entrusted to each Study Group for the Study Period 1989-1992 can be found in Contribution No. 1 to that Study Group.

2 In this Volume, the expression "Administration" is used for shortness to indicate both a telecommunication Administration and a recognized private operating agency.
