Contents

Part I	**Integrable Systems in (2+1)-Dimensions**	
Solitons and Dromions, Coherent Structures in a Nonlinear World By P.M. Santini and A.S. Fokas (With 2 Figures)		2
Boundary Value Problems in 1+1 and in 2+1, the Dressing Method, and Cellular Automata By A.S. Fokas (With 2 Figures)		14
Exponentially Localized Solitons in 2+1 Dimensions By M. Boiti, J. Leon, L. Martina, and F. Pempinelli		26
On the Boundary Conditions of the Davey-Stewartson Equation By M.J. Ablowitz, C.L. Shultz, and S.V. Manakov		29
Rational Solutions to the Two-Component K-P Hierarchies By C.R. Gilson, J.J.C. Nimmo, and N.C. Freeman		32
Construction of Inverse Data in Multidimensions By Zhuhan Jiang		36
Part II	**Criteria and Tests of Integrability: Painlevé Property, Hirota Method, Lie-Bäcklund Symmetries**	
Examples of Nonclassical Similarity Reductions By P.A. Clarkson		42
Equations That Pass Hirota's Three-Soliton Condition and Other Tests of Integrability By J. Hietarinta		46
Selection of Solvable Nonlinear Evolution Equations by Systematic Searches for Lie Bäcklund Symmetries By P. Broadbridge		51
Part III	**Spectral Methods and Related Topics, C-Integrable Systems**	
Inverse Problems of Spectral Analysis and the Integration of Nonlinear Equations By Yu.M. Berezansky		56

The Inverse Scattering Transform for the Elliptic Sinh-Gordon Equation
By M. Jaworski and D. Kaup 64

Reflection Coefficients and Poles
By D. Atkinson 68

A N × N Zakharov-Shabat System with a Quadratic Spectral Parameter
By Jyh-Hao Lee 73

On Integration of the Korteweg-de Vries Equation with a Self-consistent Source
By V.K. Mel'nikov 77

On the Initial Value Problem of the Third Painlevé Equation
By U. Muğan and A.S. Fokas (With 1 Figure) 82

Nonlinear Equations for Soliton Eigenfunctions Are the IST Integrable Equations
By B.G. Konopelchenko 87

The Geometry and Completeness of the Two-Phase Solutions of the Nonlinear Schrödinger Equations
By J.E. Lee and M.P. Tsui 94

N Double Pole Solution and Its Initial Value Problem for the Modified Korteweg-de Vries Equation
By K. Konno 98

C-Integrable Generalization of a System of Nonlinear PDE's Describing Nonresonant N-Wave Interactions
By F. Calogero 102

The Burgers Equation: Initial/Boundary Value Problems on the Semiline
By S. De Lillo 105

Part IV **Algebraic Approach to Integrability and Hamiltonian Theory**

The Tangent Bundle for Multisolitons: Ideal Structure for Completely Integrable Systems
By B. Fuchssteiner 114

Action-Angle Variables and Asymptotic Data
By G. Oevel, B. Fuchssteiner, and M. Błaszak 123

The Action-Angle Transformation for the Korteweg-de Vries Equation
By S. Carillo and B. Fuchssteiner 127

Algorithms to Detect Complete Integrability in 1+1 Dimension
By W. Wiwianka and B. Fuchssteiner 131

GN Manifolds, Yang-Baxter Equations and ILW Hierarchies
By C. Morosi and G. Tondo 136

Integral and Discrete Evolution Equations: A Unified Approach
By O. Ragnisco and P.M. Santini 140

An Abstract Tri-Hamiltonian Lax Hierarchy
By W. Oevel and O. Ragnisco 144

On Symplectic and Hamiltonian Differential Operators
By I.Ya. Dorfman 148

On a Non-Standard Hamiltonian Description of NLEE
By M. Antonowicz and M. Błaszak 152

Energy Dependent Spectral Problems: Their Hamiltonian Structures, Miura Maps and Master Symmetries
By A.P. Fordy (With 1 Figure) 157

Super Hamiltonian Operators and Lie Superalgebras
By E.D. van der Lende and H.G.J. Pijls 161

Higher (Non-isospectral) Symmetries of the Kadomtsev-Petviashvili Equations and the Virasoro Action on Riemann Surfaces
By P.G. Grinevich and A.Yu. Orlov 165

A Combinatorial Rule to Hirota's Bilinear Equations
By Tu Guizhang 170

Liouville-Arnold Integrability for Scattering Under Cone Potentials
By G. Gorni and G. Zampieri 173

Part V **Mappings, Cellular Automata and Solitons**

Lattice Equations and Integrable Mappings
By V.G. Papageorgiou, F.W. Nijhoff, and H.W. Capel (With 1 Figure) . 182

Recent Developments in Soliton Cellular Automata
By E.P. Papadopoulou (With 3 Figures) 186

Cubic Equation, Newton's Method and Analytic Functions
By P. Petek 190

Singularity of Differential Mappings and Stability of Solitons
By F.V. Kusmartsev (With 3 Figures) 195

Part VI **Physical Applications**

Action-Angle Variables in the Quantum Wess-Zumino-Witten Model
By M. Olshanetsky 202

On the Derivation of Propagator and Bound State Equations and S-Matrix Elements for Composite States
By H.J. Munczek and D.W. McKay 205

Resonant Flow over Topography
By R. Grimshaw (With 2 Figures) 209

Taxonomy of Ocean Stability Conditions
By P. Ripa 212

Kinetic Equations and Soliton Diffusion in Low-Dimensional Magnets
By V.G. Bar'yakhtar, B.A. Ivanov, A.K. Kolezhuk,
and E.V. Tartakovskaya 216

On Einstein's Equations with Two Commuting Killing Vectors
By B. Gaffet 219
