

Jan Klein

***Efficient Collision Detection
for Point and Polygon
Based Models***

Contents

Acknowledgements	v
1 Introduction	1
2 Related Work	7
2.1 Problem Statement	7
2.2 Polygonal Collision Detection	8
2.2.1 Bounding Volume Hierarchies	8
2.2.2 Space-Subdivision Approaches	11
2.2.3 Distance Fields	12
2.2.4 Hardware-Assisted Collision Detection	12
2.2.5 Theoretical Results	13
2.3 Point Cloud Collision Detection	14
2.3.1 Surface Definition	15
2.3.2 Algorithms for Point Cloud Collision Detection	15
2.4 Time-Critical Collision Detection	16
2.5 Summary and Discussion	17
3 An Average-Case Approach for Real-Time Collision Detection	19
3.1 Overview of our Approach	19
3.2 Terms and Definitions	21
3.3 Data Structure	23
3.4 Probability Parameters	26
3.4.1 Uniform polygon distribution	26
3.4.2 Non-uniform polygon distribution	29
3.5 Probability Computations	30
3.5.1 Probability of collision cells	30
3.5.2 Probability of collision	32
3.5.3 Probability of intersection in a cell	33
3.6 Intersection Volume	34

3.7	Expected Running Time of Hierarchical Collision Detection . . .	36
3.8	Results	42
3.8.1	Benchmark Scenario	43
3.8.2	Distribution of Possible Collision Cells	44
3.8.3	Preprocessing	45
3.8.4	Performance and Quality	47
3.9	Summary and Discussion	50
3.10	Future Work	51
4	Point Cloud Surfaces using Geometric Proximity Graphs	55
4.1	Implicit Surface Model	56
4.1.1	WLS Surface Definition	57
4.1.2	Problems with the Euclidean Kernel	59
4.2	Geodesic Distance Approximation	60
4.2.1	Geodesic Kernel	61
4.2.2	Proximity by Delaunay Graph	63
4.2.3	Proximity by Sphere-of-Influence Graph	64
4.2.4	Extensions of the SIG	65
4.2.5	Automatic and local bandwidth computation	67
4.2.6	Automatic boundary detection	68
4.2.7	Smooth Surfaces	69
4.3	Running time and Complexity	70
4.3.1	Close-Pairs Shortest-Paths	71
4.3.2	Pre-computations of Proximity Graphs	73
4.3.3	Function Evaluation	74
4.3.4	Dynamic Point Clouds	75
4.4	Results	77
4.5	Summary and Discussion	79
4.6	Future Work	80
5	Point Cloud Collision Detection	81
5.1	Terms and Definitions	83
5.2	An Efficient Point Cloud Hierarchy Traversal	83
5.2.1	Point Cloud Hierarchy	84
5.2.2	Exclusion and Priority Criterion	87
5.2.3	RST: Randomized Sampling Technique	89
5.2.4	Time-Critical Collision Detection	90
5.2.5	Automatic Bandwidth Detection	90
5.2.6	Sample Size	92
5.2.7	Running time and Complexity	95

5.2.8	Results	95
5.3	Interpolation Search for Point Cloud Intersection	100
5.3.1	Root Bracketing	101
5.3.2	Size of Neighborhoods and Surfel Density	104
5.3.3	Completing the Brackets	106
5.3.4	Interpolation Search	108
5.3.5	Models with Boundaries	111
5.3.6	Precise Intersection Points	111
5.3.7	Complexity Considerations	112
5.3.8	Results	114
5.4	Summary and Discussion	116
5.5	Future Work	118
6	Conclusions and Future Work	121
	Bibliography	123
