Contents

Preface	xix
Notations	xxiii
Chapter 1 Introduction	1
1.1 PRELIMINARY STUDIES	4
1.1.1 Reaction Stoichiometry, Thermodynamics, and Synthesis Routes	4
1.2 LABORATORY EXPERIMENTS	4
1.3 ANALYSIS OF THE EXPERIMENTAL RESULTS	5
1.4 SIMULATION OF REACTOR MODELS	6
1.5 INSTALLATION OF A PILOT-PLANT UNIT	
1.6 CONSTRUCTION OF THE FACILITY IN FULL SCALE	6
REFERENCES	7
CHAPTER 2 STOICHIOMETRY AND KINETICS	9
2.1 STOICHIOMETRIC MATRIX	10
2.2 REACTION KINETICS	12
2.2.1 Elementary Reactions	13
2.2.2 Kinetics of Nonelementary Reactions: Quasi-Steady-	
State and Quasi-Equilibrium Approximations	16
2.2.2.1 Ionic and Radical Intermediates	18

2.2.2.2 Catalytic Processes: Eley–Rideal Mechanism	20
2.2.2.3 Catalytic Processes: Langmuir–Hinshelwood Mechanism	24
REFERENCES	25
CHAPTER 3 HOMOGENEOUS REACTORS	27
3.1 REACTORS FOR HOMOGENEOUS REACTIONS	27
3.2 HOMOGENEOUS TUBE REACTOR WITH A PLUG FLOW	34
3.2.1 Mass Balance	35
3.2.2 Energy Balance	37
3.3 HOMOGENEOUS TANK REACTOR WITH PERFECT MIXING	40
3.3.1 Mass Balance	40
3.3.2 Energy Balance	41
3.4 HOMOGENEOUS BR	44
3.4.1 Mass Balance	44
3.4.2 Energy Balance	45
3.5 MOLAR AMOUNT, MOLE FRACTION, REACTION EXTENT,	
CONVERSION, AND CONCENTRATION	48
3.5.1 Definitions	48
3.5.2 Relation between Molar Amount, Extent of Reaction, Conversion	1,
and Molar Fraction	51
3.5.2.1 A System with a Single Chemical Reaction	51
3.5.2.2 A System with Multiple Chemical Reactions	52
3.5.3 Relationship between Concentration, Extent of Reaction, Conver	sion,
and Volumetric Flow Rate in a Continuous Reactor	55
3.5.3.1 Gas-Phase Reactions	55
3.5.3.2 Liquid-Phase Reactions	. 57
3.5.4 Relationship between Concentration, Extent of Reaction, Conver	sion,
and Iotal Pressure in a BK	59
3.5.4.1 Gas-Phase Reactions	59
3.5.4.2 Liquid-Phase Reactions	60
3.6 STUICHIOMETRY IN MASS BALANCES	61
3.7 EQUILIBRIUM REACTOR: ADIABATIC TEMPERATURE CHANGE	66
3.7.1 Mass and Energy Balances	66
3.8 ANALYTICAL SOLUTIONS FOR MASS AND ENERGY BALANCES) 68 71
3.8.1 Multiple Reactions	/1
3.8.1.1 First-Order Parallel Reactions	/1
3.8.1.2 Momentaneous and Integral Yield for Parallel Reactions	76
3.8.1.3 Reactor Selection and Operating Conditions for Parallel Re	actions 78
3.8.1.4 First-Oraer Consecutive Reactions	80
3.8.1.5 Consecutive-Competitive Reactions	83
3.8.1.6 Product Distributions in PFRs and BRs	84

3.8.1.7 Product Distribution in a CSTR	87
3.8.1.8 Comparison of Ideal Reactors	88
3.9 NUMERICAL SOLUTION OF MASS BALANCES FOR VARIOUS	
COUPLED REACTIONS	89
REFERENCES	92
HAPTER 4 NONIDEAL REACTORS: RESIDENCE TIME DISTRIBUTIONS	93
4.1 RESIDENCE TIME DISTRIBUTION IN FLOW REACTORS	93
4.1.1 Residence Time as a Concept	93
4.1.2 Methods for Determining RTDs	96
4.1.2.1 Volume Element	96
4.1.2.2 Tracer Experiments	97
4.2 RESIDENCE TIME FUNCTIONS	97
4.2.1 Population Density Function $E(t)$	98
4.2.2 Distribution Functions $F(t)$ and $F^*(t)$	100
4.2.3 Intensity Function $\lambda(t)$	101
4.2.4 Mean Residence Time	101
4.2.5 <i>C</i> Function	102
4.2.6 Dimensionless Time	102
4.2.7 Variance	103
4.2.8 Experimental Determination of Residence Time Functions	103
4.2.9 RTD for a CSTR and PFR	106
4.2.10 RTD in Tube Reactors with a Laminar Flow	108
4.3 SEGREGATION AND MAXIMUM MIXEDNESS	113
4.3.1 Segregation Model	113
4.3.2 Maximum Mixedness Model	114
4.4 TANKS-IN-SERIES MODEL	115
4.4.1 Residence Time Functions for the Tanks-in-Series Model	116
4.4.2 Tanks in Series as a Chemical Reactor	119
4.4.3 Maximum-Mixed Tanks-in-Series Model	120
4.4.4 Segregated Tanks in Series	120
4.4.5 Comparison of Tanks-in-Series Models	121
4.4.6 Existence of Micro- and Macrofluids	121
4.5 AXIAL DISPERSION MODEL	123
4.5.1 RTDs for the Axial Dispersion Model	123
4.5.2 Axial Dispersion Model as a Chemical Reactor	128
4.5.3 Estimation of the Axial Dispersion Coefficient	133
4.6 TUBE REACTOR WITH A LAMINAR FLOW	134
4.6.1 Laminar Reactor without Radial Diffusion	134
4.6.2 Laminar Reactor with a Radial Diffusion: Axial Dispersion Model	137
