OFFICIAL

PROCEEDINGS

OF THE TWENTY-SECOND

INTERNATIONAL

INTELLIGENT MOTION 1992

CONFERENCE

**SEPTEMBER 20-24, 1992
IRVINE, CALIFORNIA**

This Book is the Property of

INTELLIGENT MOTION '92 - SEPTEMBER

TABLE OF CONTENTS

| Technical Papers and Authors | Session No. | Page No. |
|--|----------------|-------------|
| Motors & Actuators | | |
| New Squirrel Cage Motor Construction High Efficiency Adjustable-Speed Drive With Direct Connection to the AC Line — <i>P. Clarke, Clarke Associates</i> | IM1.1 | * |
| Performance of New High Strain Magnetostrictive Materials & High Power, Long Stroke Actuators and Transducers — <i>M. Goodfriend, Edge Technology</i> | IM1.2 | * |
| The Elastic Wave Motor - A Versatile Terfenol Driven, Linear Actuator With High Force and Great Precision — <i>Reinhold C. Roth, President DynaMotive Corporation</i> | IM1.3 | 1 |
| Types of Two-Phase and Five-Phase Step Motors — <i>D. Jones, J. Koike et al, Oriental Motors</i> | IM1.4 | * |
| Control Methodology for Commercial Magnetic Bearing Systems — <i>Ron Kipp, Joe Imlach, Kingsbury, Inc.</i> | IM1.5 | 9 |
| Twice-sf Beat Phenomena of Three-Phase Induction Motor With Rotor-Bar Fault — <i>Osamu Sugiura, Yamanashi University; Yuji Akiyama, Kamagawa Institute of Technology</i> | IM1.6 | 18 |
| Effects of Mechanical Stress on Switched Reluctance Machine Performance — <i>A. Krinickas, D. Belanger, Sundstrand</i> | IM1.7 | 28 |
| Motion Systems #1 | | |
| A 15,000 RPM, 40 HP Adjustable-Speed Motor Drive System Using 300A/1200V IGBTs for Industrial Applications — <i>R. Palma, J. He, K. Chen, C. Wong, S. Nordhauser, REM Technologies</i> | IM2.1 | 35 |
| Structural Analysis on Reliable Operation of Digital Servo Systems — <i>Dal Y. Ohm, Cygnet Systems, Inc.</i> | IM2.2 | 47 |
| Synchronizing Motion to External Events — <i>Curtis S. Wilson, Delta Tau Data Systems</i> | IM2.3 | 55 |
| Low Frequency Vibration Control Using a Low-Cost DSP Chip — <i>Charley Melear, Motorola Semiconductor</i> | IM2.4 | * |
| Observer and Adaptive Migration for Monolithic Power IC Subsystems — <i>J. Comparetto, Allegro MicroSystems</i> | IM2.5 | * |
| Foolproof Operation From Incremental Position Sensors — <i>Larry Hayes, Motorola Semiconductor</i> | IM2.6 | 64 |

| Technical Papers and Authors | Session No. | Page No. |
|---|----------------|-------------|
| Thermal Design & Packaging Achieving | | |
| Introduction: Power Packaging Design | | |
| —Jeff Fishbein, <i>International Rectifier</i> | IM3.0 | 70 |
| Achieving Higher Levels of Integration for Commercial and Industrial Power Applications, Package Substrate Choices | | |
| —Herbert J. Fick, <i>The Bergquist Co.</i> | IM3.1 | 71 |
| System Cost Advantages of Power Integration | | |
| —B. Jones, <i>Consultant (Emerson)</i> | IM3.2 | * |
| Power Hybrids Reliability Advantages | | |
| —Abraham Katzanek, <i>Rafael</i> | IM3.3 | 76 |
| Integrated Power Module Requirements for Automotive Applications: Achieving Higher Power Density | | |
| —John M. Miller, <i>Ford Motor Company</i> | IM3.4 | 83 |
| PCIM Semiconductors #1 | | |
| Low Cost Power Supply Using Smart Power MOSFET | | |
| —Marco Bildgen, <i>Jean-Marie Bourgeois, SGS-Thomson</i> | IM4.1 | 91 |
| Adoption of Advanced Materials in Hybrid Packaging Technique for Ultra High Power Semiconductor Devices | | |
| —Ngon Binh Nguyen, <i>Westinghouse Electronic Systems Group</i> | IM4.2 | 99 |
| Implications of Moving to 3V for Analog Circuits | | |
| —Steve Goacher, <i>Texas Instruments</i> | IM4.3 | 103 |
| A New Mixed Technology Process and Design Techniques for Power ASIC Manufacturing | | |
| —R. Tegatz, <i>J. Devore, D. Cotton, T. Efland, Texas Instruments Inc.</i> | IM4.4 | 115 |
| Advanced CMOS Polysilicon Thin-Film Transistor Process | | |
| —G. Dolny, <i>et al, Harris Semiconductor</i> | IM4.5 | * |
| PCIM Semiconductors #2 | | |
| Accurate Junction Temperature Calculation Optimizes IGBT Selection for Maximum Performance and Reliability | | |
| —S. M. Clemente, <i>D. A. Dapkus II, International Rectifier</i> | IM5.1 | 128 |
| Applying High Voltage Half Bridge Driver ICs Successfully | | |
| —George E. Danz, <i>Keith E. Jackoski, Harris Semiconductor</i> | IM5.2 | 142 |
| Switching Modern Gate Controlled Devices | | |
| —A. Galluzzo, <i>M. Melito, SGS-Thomson</i> | IM5.3 | * |
| A Power Semiconductor Diode With an Integrated Reverse-Voltage Sensor | | |
| —George V. Manduteanu, <i>IPRS Baneasa (Romania)</i> | IM5.4 | 153 |
| IGBT User Guidelines | | |
| —Ken Dierberger, <i>Advanced Power Technology</i> | IM5.5 | 157 |

| Technical Papers and Authors | Session No. | Page No. |
|--|-------------|----------|
| Digital ICs for Motion Systems | | |
| Programming Motion Controllers With PC Memory Cards —Roy Richards, Fujitsu Microelectronics, Inc. | IM6.1 | 163 |
| DSP for Embedded Systems —T. Shultz, G. Hillman, Motorola Semiconductor | IM6.2 | * |
| Fuzzy Logic: From Software to Silicon - A Primer —Camerone Welch, Togai InfraLogic, Inc. | IM6.3 | 172 |
| PC-On-A-Chip Cuts Embedded Controller Size, Power and Cost —Suresh Agarwal, Chips & Technologies | IM6.4 | 183 |
| Motion Systems #2 | | |
| Brushless Motion Technology - A Market & Technical Update —George Gulalo, Motor Tech Trends | IM7.1 | 187 |
| An Overview of Modern Step Motor Control Methods —Albert C. Leenhouts, Consultant, Litchfield Engineering Co. | IM7.2 | 195 |
| Servo Amplifier Design for Switched Reluctance Motors —G. Holling, Advanced Motion Control | IM7.3 | * |
| High-Current DC Motor Drive Uses Low On-Resistance Surface Mount MOSFETs —Ken Berringer, Motorola, Inc. | IM7.4 | 205 |
| Increasing the High-Speed Torque of Bipolar Stepper Motors —Steven Hunt, National Semiconductor | IM7.5 | 217 |
| Motion Systems #3 | | |
| Sensorless Motor Commutation —K. Schwartz, Allegro MicroSystems | IM8.1 | * |
| Vector Control Using A Single Vector Rotation Semiconductor for Induction and Permanent Magnet Motors —F. P., Flett, Analog Devices | IM8.2 | 225 |
| "Smart-Power, Systems-In-A-Module" Provide Control and Drive for High-Power, 3-Phase Brushless Motors —Paul. R. Emerald, Omnirel Corporation | IM8.3 | 236 |
| Stepper Controller Runs at 3 Million Pulses/Sec —Stephen D. Holle, Technology 80, Inc. | IM8.4 | 249 |
| DC Motor Selection Criteria —M. Rogen, Maxon Precision Motors | IM8.5 | * |
| Smart Power Disk Drive VCM Drivers —A. Stryer, Allegro MicroSystems | IM8.6 | * |

*Papers not available at time of printing, may or may not be available at conference.
