Abstract	ix
Zusammenfassung	xi
1 Introduction	1
1.1 Oxygen	2
1.2 Organization of this document	3
1.3 Notations	5
2 The target DMPP	7
2.1 A classification of today's parallel computers	7
2.1.1 Flynn's taxonomy	7
2.1.2 Shared vs. distributed memory	9
2.1.3 Type and number of processors	10

2.2	Classification of DMPPs	11
2.2.1	Networks	11
2.2.2	Communication mechanism	12
2.2.3	The communication/computation ratio	16
2.3	Some DMPP examples	19
2.3.1	K9	19
2.3.2	Parsytec SC256	20
2.3.3	iWARP	23
2.3.4	Fujitsu AP1000	24
2.3.5	Sequent emulator	27
3	Related work and design objectives	29
3.1	New languages	31
3.2	Conventional parallelization	32
3.3	Parallelization for DMPPs	33
3.4	Design objectives	37
4	The programming paradigm	41
4.1	User view of Oxygen	41
4.2	Local and public blocks	42
4.3	Data decomposition directives	46
4.4	Explicit directives	49
4.4.1	Specification of public blocks	50
4.4.2	Code distribution	51
4.4.3	Checkpoints and serial time	53

4.4.4	Explicit (global) communications	54
4.4.5	The COPY directive	56
4.5	Usage of MULTICOPY	57
5	Automatic generation of directives	59
5.1	Dependence Analysis	59
5.1.1	Introduction	60
5.1.2	Dependence tests	65
5.2	Loop Mapping	72
5.3	Variable Mapping	74
5.3.1	Variable Reference Classification	74
5.3.2	Directive-driven loop mapping	75
5.3.3	Automatic Variable Mapping	75
5.4	Report Generation	76
5.5	Experimenting on LINPACK	77
5.5.1	Example compilation	80
6	Implementation	83
6.1	The front end and IL	84
6.1.1	The control flow graph	84
6.1.2	Expression trees	87
6.1.3	The symbol table	88
6.2	Compilation of public blocks	89
6.2.1	An example of a symbol handler	89
6.2.2	Bin-graphs	91

6.2.3	Analyzer code generation	94
6.3	The code generation recursion	101
6.3.1	Generating analyzer code	106
6.4	The run-time library	108
6.4.1	Interface data structures	108
6.4.2	The analyzer library	109
6.4.3	Router	109
6.4.4	Deadlocks in generated communications	112
6.4.5	Executor	117
6.4.6	Implementation of multicopy	119
6.4.7	Implementation of special directives	123
6.4.8	Library port to message passing DMPPs	125
6.4.9	Port to different network topologies	128
7	Performance measurements	131
7.1	Benchmark description	132
7.1.1	Dense linear algebra	132
7.1.2	Signal processing	132
7.1.3	SOR	133
7.1.4	PGMRES	134
7.2	Results	137
7.2.1	K9	137
7.2.2	SC256, iWARP, and AP1000	143
7.2.3	The Sequent emulator	149

7.2.4	Serial measurements	150
7.2.5	Memory requirements	151
7.2.6	Oxygen on Massively Parallel Processors	153
8	Conclusions	157
8.1	Compiler related conclusions	158
8.2	Architecture related conclusions	159
8.3	Further comments and future work	160
A	The implemented F77 subset	163
B	The display tool	167
	List of Figures	171
	List of Tables	175
	List of Algorithms	177
	Bibliography	179
	Curriculum Vitae	191
