Modelling of Plastic Deformation and Its Engineering Applications

Proceedings of the 13th Risø International Symposium
on Materials Science

7-11 September
1992

Editors

S.I. Andersen J.B. Bilde-Sørensen N. Hansen D. Juul Jensen

T. Leffers H. Lilholt T. Lorentzen O.B. Pedersen B. Ralph

RISØ NATIONAL LABORATORY
ROSKILDE, DENMARK

Contents

Invited Papers

Mechanisms of plastic flow in a flexible-chain glassy polymer 1
A.S. Argon, P.H. Mott and U.W. Suter

Modelling of industrial hot forming 13
J.H. Beynon and C.M. Sellars

3D dislocation simulation of plastic instabilities by work-softening in alloys 27
G.R. Canova, Y. Bréchet and L.P. Kubin

Plasticity, damage accumulation, and fracture at large strains 39
J.D. Embury and G.T. Gray, III

Texture, anisotropy, microstructure and models 57
T. Leffers and N. Hansen

Constitutive creep equation of the modified theta concept: physical basis and its application to alloy design 79
H. Oikawa and K. Maruyama

Modelling the effect of microstructure on yield anisotropy 93
A.D. Rollett, D. Juul Jensen and M.G. Stout

Micromechanisms and micromechanical modelling of cyclic damage ahead of fatigue cracks 111
S. Suresh

Materials science input to engineering models 125
C. Teodosiu

Applications of plastic material models 147
V. Tvergaard

Modelling of complex forming processes 161
P. Van Houtte, A. Van Bael, J. Winters,
E. Aernoudt, F. Hall, N. Wang, I. Pillinger,
P. Hartley and C.E.N. Sturgess

Contributed Papers

The influence of plastic deformation and backstress on creep damage 173
J. Aktaa, D. Munz, B. Schinke and J. Schwertel

The anisotropy of large deformations in glassy polycarbonate 181
E.M. Arruda and M.C. Boyce

Some physical considerations for modelling the inelastic behavior of alkali halides in the ductile regime 189
M. Aubertin

The rheological behaviour modelling of a titanium alloy, Ti-4Al-2.5Sn in the (α + β) domain 197
P. Audrerie, A.M. Chaze and C. Levaillant

On the fcc single crystals hardening stages and plasticity kinematics at various temperatures 205
B. Bacroix, P. Franciosi and A. Mecif

Micromechanics of permanent deformation in softwood 213
C.Y. Barlow and J. Woodhouse

Comparison between FE and physical modelling of closed die forging 221
N. Bay, A. Hansen, C.B. Andersen, J. Oudin and P. Picart

Atomistic versus continuum modelling of plastic flow in an idealized 2-D solid 227
V.V. Bulatov and A.S. Argon

Modelling of shear band formation 235
K.C. Chan and W.B. Lee

Modelling type iv cracking in thin plates under uniaxial loading 241
R.E. Craine and M.G. Newman

Conservation laws for the crystal orientation distribution 247
P. Dluzewski

Mechanism of shear fracture during transverse shearing with uniaxial compression 253
E.S. Dzidowski

A plasticity based model of small fatigue crack growth 259
L. Edwards and Y.H. Zhang

Effects of dynamic precipitation on the constitutive equations of aluminium 265
E. Evangelista, H.J. McQueen and E. Cerri

Simplified model of local texture development in metal forming processes 271
W. Gambin

Modelling of the mechanical behaviour of a material during phase transformation. Macroscopical micromechanical approach 277
E. Gautier, S. Denis, Ch. Liebaut, J.F. Ganghoffer
S. Sjöström and A. Simon

The influence of grain size and texture on the flow stress of pure copper 285
N. Hansen, D. Juul Jensen, Y.M. Tang and B. Ralph

Model for integrated process and microstructure simulation in hot forming 291
K. Karhausen and R. Kopp

On evolution of mobile dislocation density at different conditions of plastic deformation 303
J.R. Klepaczko

High temperature behaviour of TiN reinforced silicon nitride, studied by mechanical spectroscopy 311
A. Lakki and R. Schaller

On thermodynamics of elastoplastic continua at finite strain 317
K.C. Le and H. Stumpf

Quantitative simulation of the copper-type rolling texture 323
T. Leffers and D. Juul Jensen

A description of stress redistribution in polycrystalline viscoplasticity 331
J. Legait, P. Pilvin and G. Cailletaud

Plasticity theory of microinhomogeneous materials at large strain gradient 337
V.I. Levitas

Pseudoelastic behavior modelling of shape memory alloys Cu Zn Sn and Cu Zn Al monocrystals 343
C. Lexcellent, B. Raniecki and C. Rogueda

On the use of neutron and gamma diffraction techniques in modelling of plastic deformation 349
T. Lorentzen and O.B. Pedersen

Comparison of constitutive equations for isothermal conditions and anisothermal multistage deformations in austenitic stainless steels 355
H.J. McQueen, N.D. Ryan and E. Evangelista

Simulation of dilatation in flexible-chain glassy polymers 361
P.H. Mott, A.S. Argon and U.W. Suter

Non local hardenings in metals 367
D. Muller, M. Berveiller and J. Kratochvil

Modelling of industrial I-beams rolling and wire drawing 373
Y.I. Nyashin

Grain boundaries and plastic deformation 379
V. Paidar

Modelling of texture evolution during thermomechanical treatments of zinc alloys: application to texture tayloring and properties optimization 385
M.J. Philippe, F.E. Mellab, F. Wagner, J. Wegria and C. Esling

Modeling deformation induced textures in titanium using analytical solutions for single crystal response 391
V.C. Prantil, P.R. Dawson and J.T. Jenkins

Constitutive equations for commercial aluminium alloys deformed under hot-working conditions 397
E.S. Puchi

Optimal crystallographic texture determination for metal forming processes using a self-consistent model 403
E. Reubrez, M. Berveiller and P. Lipinski

Mapping of the plastic strain in the stretch zone ahead of a stable crack 409
F. Saadat, M.N. Bassim and J.R. Matthews

Kinematic analysis of strain hardening to elucidate a new constitutive relationship 415
S. Saimoto, B.J. Diak and K.R. Upadhyaya

Inplane single shear deformation of Ti-6Al-4V alloy sheet under transformational superplasticity condition 423
K. Sato, Y. Miyaki and Y. Toyabara

Numerical implementation of the elastic-plastic self-consistent constitutive relation in a finite element code 431
E. Scacciatella, P. Lipinski, M. Berveiller
J.M. Detraux and F. Horkay

Stochastic modelling of cyclic deformation processes in metals 439
E.A. Steck

On a generalization of elasto-inelastic models within the frame of extended thermodynamics 445
H. Stumpf and J. Badur

Biaxial orientation processing of uPVC 451
J. Sweeney and I.M. Ward

A planar model study of creep in particulate reinforced MMC's 457
N. Sørensen

Modelling nonlinear behavior of composites with imperfect interfaces 467
F. Thébaud, J.C. Michel, E. Hervé, P. Suquet and A. Zaoui

Modelling of steady and unsteady metal flow processes under complex loading and large strain 473
P.V. Trusov and V. Y. Stolbov

Analysis of the swift-effect in solid bar torsion using a rate-sensitive crystal plasticity model 479
E. van der Giessen, K.W. Neale and Y. Qiu

Model for longitudinal shear bands during torsion tests on cold drawn steel wires 485
P. Van Houtte, P. Watté, E. Aernoudt, J. Gil Sevillano, A. Martin Meizoso, W. Van Raemdonck and I. Lefever

Continuum plasticity theory with microstructural characterization 491
G.Z. Voyiadjis and W. Huang

Computer simulation of texture development by analysis of deformation unevenness over the sheet thickness 497
P. Wagner, A. Fedosseev and G. Gottstein

Numerical approach to the elastic-plastic analysis of thermal stresses in a ceramic-metal bimaterial plate with graded microstructure 503
K. Wakashima, H. Tsukamoto and T. Ishizuka

Grain boundary hardening, worksoftening and LEDS in MA alloys 511
H.G.F. Wilsdorf and D. Kuhlmann-Wilsdorf

A modified 3-D constitutive model for glassy polymers and its application to large simple shear of polycarbonate 519
P.D. Wu and E. van der Giessen

The strain gradient phenomenon in viscoplasticity: theory and application to shear instability 525
H.M. Zbib

An evaluation of planar biaxial deformation in H19 can-stock sheet 539
S.R. MacEwen, R. Perrin, D. Green, A. Makinde and K. Neale

Author index 547
