

Additives for Polyolefins: Getting the Most Out of Polypropylene, Polyethylene, and TPO

Michael Tolinski

Table of Contents

PREFACE	xiii
----------------------	-------------

Section I: Overview of Polyolefins and Additives

CHAPTER 1	Introduction	3
1.1	Importance of POs	3
1.2	Importance of PO additives	4
1.3	Recent issues in using additives.....	5
1.3.1	Matching property requirements with additive type and amount	5
1.3.2	Doing more with less material	6
1.3.3	New properties for new markets	7
1.3.4	Unintended additive interactions	7
1.3.5	Faster processing	8
CHAPTER 2	Trends in Polyolefin and Additive Use.....	9
2.1	PO market trends.....	9
2.1.1	Growth vs. volatility	10
2.1.2	Future resin growth and prices	10
2.2	Overall trends in additives production and use.....	11
2.3	Trends in resin compounding	12
2.4	Trends in specific PO applications.....	13
2.4.1	Packaging trends	14
2.4.2	Automotive trends for POs.....	16
2.4.3	Construction and infrastructure application trends	18

Section II: Environmental Resistance

CHAPTER 3	Antioxidants and Heat Stabilization	25
3.1	Importance of AOs and stabilizers for POs	26
3.2	Primary and secondary AOs	29
3.2.1	Primary AOs (radical scavengers)	29
3.2.2	Secondary AOs (peroxide decomposers)	31
3.3	Factors determining AO selection	33
3.3.1	Thermal and color requirements in melt processing and in service	36
3.3.2	AO selection by PO type and finished product form	37
3.3.3	AO physical forms and handling	38
3.3.4	Synergies and antagonistic interactions	38
3.3.5	Cost	40
3.3.6	Environmental, food-contact, and health and safety considerations	41
CHAPTER 4	Ultraviolet Light Protection and Stabilization	45
4.1	UV degradation of POs	47
4.2	UV blockers, screeners, and absorbers	48
4.2.1	UV-blocking and -absorbing fillers and pigments ..	48
4.2.2	Organic UV absorbers	50
4.3	Quenchers and peroxide decomposers	51
4.4	HALS: Free-radical scavengers	51
4.4.1	Overview of HALS	51
4.4.2	Interactions of HALS and other additives	53
4.5	Factors determining stabilizer selection	55
4.5.1	General factors	55
4.5.2	Light stabilizers for specific PO applications	56
CHAPTER 5	Flame-Retarding Additives	61
5.1	Overview: The need for flame-retardant formulations ...	61
5.1.1	Trends in flame-retarding additives	61
5.1.2	Mechanisms of burning	62
5.2	Halogen-based flame retardants	63
5.2.1	Composition of H-FRs	64
5.2.2	Concerns about halogenated FRs	66
5.3	Mineral-based flame retardants	68
5.3.1	ATH and MDH	68
5.3.2	Other mineral fillers' FR effects	69

5.4	Intumescent and phosphorous-based flame retardants ..	70
5.4.1	Mechanisms of phosphorous FRs	70
5.4.2	Issues in improving phosphorous FRs	71
5.5	Factors determining the selection of FR additives	72
5.5.1	Cost, risk, and performance	74
5.5.2	Property effects and co-additive interactions	75
5.5.3	FR density and form	76
5.5.4	Halogen-free benefits (and costs)	77

CHAPTER 6	Additives for Modifying Electrical Properties	79
6.1	Antistatic and ESD additives	79
6.1.1	Migrating chemical antistats	81
6.1.2	Nonmigrating polymers as permanent antistatic/ESD additives	85
6.1.3	Conductive fillers as antistatic/ESD additives	86
6.2	EMI shielding	88
6.2.1	Conductive fillers for EMI shielding	88
6.2.2	Conductive fibers for EMI shielding	89
6.3	Choosing antistat/ESD/EMI additives	89
6.3.1	Antistat selection factors	89
6.3.2	Design considerations for EMI shielding	90

Section III: Mechanical Property Enhancement

CHAPTER 7	Overview of Fillers and Fibers	95
7.1	Importance of fillers and fibers for POs	96
7.2	Common inorganic fillers	96
7.2.1	Calcium carbonate	97
7.2.2	Talc	98
7.2.3	Wollastonite	99
7.2.4	Mica	100
7.2.5	Silica	101
7.2.6	Glass flour and spheres	101
7.2.7	Other microfillers	102
7.3	Nanofillers	103
7.3.1	Potential of nanofillers	103
7.3.2	Platy nanoclays	104
7.3.3	Nanotubes	105
7.3.4	POSS nanomaterials	106
7.4	Impact modifiers and TPOs	107
7.4.1	Impact modification for thick products	108
7.4.2	Impact modification for film and sheet	109

7.5	Fiber reinforcement.....	110
7.5.1	Short glass fibers.....	111
7.5.2	Long glass fibers	112
7.5.3	Plant-based fibers	115
7.5.4	Other kinds of fiber reinforcement	118

CHAPTER 8	Factors Determining the Selection of Fillers and Fibers	121
8.1	Cutting costs and improving properties with fillers	122
8.2	Impact modification: Balancing stiffness with toughness.....	124
8.3	Mechanical reinforcement: Properties create opportunities.....	126
8.4	Processing pitfalls and hidden costs	128
8.5	Questions when choosing fillers and fibers	132

Section IV: Appearance Enhancement

CHAPTER 9	Colorants.....	139
9.1	Coloring strategies	139
9.1.1	White colorants	140
9.1.2	Black colorants	141
9.1.3	Full-spectrum colorants.....	141
9.1.4	Metallic colorants.....	145
9.1.5	Pearlescent colorants and color-enhancing additives	147
9.2	Colorant delivery and processing	148
9.2.1	Colorant delivery.....	148
9.2.2	Processing issues with colorants.....	150
9.3	Factors that affect the choice of colorant	151
9.3.1	General factors	151
9.3.2	Additive/colorant interactions	155
9.3.3	External coatings vs. internal colorants.....	156
CHAPTER 10	Nucleation and Clarity	157
10.1	Nucleating agents: Overview	157
10.1.1	Nucleating agent effects on processing and properties.....	158
10.1.2	Clarifying nucleating agents.....	162

10.2	Factors in choosing nucleating/clarifying agents.....	164
10.2.1	Applications and resins.....	164
10.2.2	Practical use factors.....	166

Section V: Processing Aids

CHAPTER 11	Processing Aids for Molding	171
11.1	Melt-flow modification and mold release	171
11.1.1	Melt-flow-enhancing lubricants and modifiers	172
11.1.2	Mold-release additives	175
11.2	Special cases for processing aids in molding.....	177
11.2.1	Aids for molding highly filled compounds.....	177
11.2.2	Aids for ISBM.....	178
11.2.3	Aids for rotational molding	179
CHAPTER 12	Processing Aids for Extrusion	181
12.1	Requirements of extrusion-based processes	181
12.2	Slip agents.....	182
12.3	Antiblocking agents.....	184
12.3.1	Inorganic antiblocks.....	184
12.3.2	Organic antiblocks	186
12.3.3	Clarity/slip antiblocks.....	188
12.4	Additives for reducing melt fracture and die buildup	189
12.4.1	Fluoropolymer processing aids.....	190
12.4.2	Reducing die and screen-pack fouling.....	191
12.5	Processing aids for specific extrusion situations.....	191
12.5.1	High-throughput extrusion	191
12.5.2	LLDPE blown-film stability	192
12.5.3	Oriented PP slit tape fibrillation	192
12.5.4	Thin PP fibers	193
12.5.5	Highly filled masterbatch production.....	193
12.5.6	Wood-plastic composites	193

Section VI: Other Modifications of Form and Function

CHAPTER 13	Reducing Density: Polyolefin Foams.....	197
13.1	Blowing foams: External agents vs. internal agents.....	197
13.1.1	Physical blowing agents.....	198
13.1.2	Chemical blowing agents.....	199

13.2	Product sectors requiring chemical blowing agents	200
13.2.1	Molded packaging and consumer products	200
13.2.2	Automotive moldings	201
13.2.3	Extruded construction products	202
13.2.4	Foaming in rotational molding	202
13.3	Factors in blowing better foams	203
CHAPTER 14	Coupling, Compatibilizing, Recycling, and Biodegradability.....	205
14.1	Coupling fillers and fibers with the PO matrix	205
14.1.1	Traditional coupling agents	206
14.1.2	Alternative coupling agents.....	207
14.2	Compatibilizers for integrating regrind and recycled materials.....	209
14.3	Additives that promote PO biodegradability	212
CHAPTER 15	Crosslinking	215
15.1	Crosslinked PE: advantages and applications.....	215
15.2	Crosslinking agents.....	217
15.2.1	Peroxide-based agents	217
15.2.2	Silane-based agents.....	218
15.2.3	Radiation-induced crosslinking	219
15.3	Factors in choosing crosslinking agents	219
CHAPTER 16	Sterilization and Radiation Resistance	221
16.1	Sterilization effects on PO products.....	221
16.1.1	Effects of irradiation sterilization	221
16.1.2	Effects of EtO sterilization	223
16.1.3	Effects of high-temperature sterilization	223
16.2	Additive solutions for sterilization-resistant POs.....	223
CHAPTER 17	Aesthetics Enhancement and Surface Modification.....	225
17.1	Anti-scratch additives.....	226
17.1.1	Conventional anti-scratch approaches.....	226
17.1.2	Evaluating anti-scratch additives.....	227
17.1.3	Alternative anti-scratch additives	227
17.2	Antifogging agents	228
17.3	Antimicrobials and biocides	229
17.4	Odor-modifying additives	231

Section VII: Conclusion: Incorporating Additives

CHAPTER 18	Adding Additives to Resin.....	235
18.1	Handling additives	235
18.1.1	Practical handling issues.....	236
18.1.2	Health and safety issues	236
18.2	Mixing and dispersing additives into resin	237
18.2.1	Screw-processing developments	237
18.2.2	"Lean" compounding	238
18.3	Blending and feeding additives	238
18.4	Choosing the best form of an additive	239
