# Contents

Preface	vii
Chapter 1 The fixed point formula	1
1.1 Shimura varieties	1
1.2 Local systems and Pink's theorem	4
1.3 Integral models	6
1.4 Weighted cohomology complexes and intersection complex	10
1.5 Cohomological correspondences	15
1.6 The fixed point formulas of Kottwitz and Goresky-Kottwitz-MacPherson	18
1.7 The fixed point formula	23
Chapter 2 The groups	31
2.1 Definition of the groups and of the Shimura data	31
2.2 Parabolic subgroups	33
2.3 Endoscopic groups	35
2.4 Levi subgroups and endoscopic groups	41
Chapter 3 Discrete series	47
3.1 Notation	47
3.2 The functions $\Phi_M(\gamma, \Theta)$	49
3.3 Transfer	49
3.4 Calculation of certain $\Phi_M(\gamma, \Theta)$	56
Chapter 4 Orbital integrals at $p$	63
4.1 A Satake transform calculation (after Kottwitz)	63
4.2 Explicit calculations for unitary groups	64
4.3 Twisted transfer map and constant terms	71
Chapter 5 The geometric side of the stable trace formula	79
5.1 Normalization of the Haar measures	79
5.2 Normalization of the transfer factors	79
5.3 Fundamental lemma and transfer conjecture	80
5.4 A result of Kottwitz	81

Chapter 6	Stabilization of the fixed point formula	85
6.1	Preliminary simplifications	85
6.2	Stabilization of the elliptic part, after Kottwitz	88
6.3	Stabilization of the other terms	89
Chapter 7	Applications	99
7.1	Stable trace formula	99
7.2	Isotypical components of the intersection cohomology	103
7.3	Application to the Ramanujan-Petersson conjecture	110
Chapter 8	The twisted trace formula	119
8.1	Nonconnected groups	119
8.2	The invariant trace formula	125
8.3	Stabilization of the invariant trace formula	130
8.4	Applications	135
8.5	A simple case of base change	149
Chapter 9	The twisted fundamental lemma	157
9.1	Notation	157
9.2	Local data	158
9.3	Construction of local data	168
9.4	Technical lemmas	179
9.5	Results	186
Appendix	Comparison of two versions of twisted transfer factors	189
A.1	Comparison of $\Delta_0(\gamma_H, \delta)$ and $\Delta_0(\gamma_H, \gamma)$	189
A.2	Relation between $\text{inv}(\gamma, \delta)$ and $\alpha(\gamma, \delta)$	195
A.3	Matching for $(G, H)$ -regular elements	201
