Spectroscopy, Theory and Mechanism in Bioinorganic Chemistry

Faraday Discussions

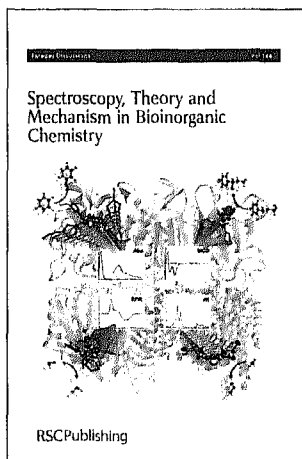

www.rsc.org/faraday_d

A General Discussion on Spectroscopy, Theory and Mechanism in Bioinorganic Chemistry was held at the University of Nottingham, United Kingdom on 5th, 6th and 7th July 2010.

RSC Publishing is a not-for-profit publisher and a division of the Royal Society of Chemistry. Any surplus made is used to support charitable activities aimed at advancing the chemical sciences. Full details are available from www.rsc.org

CONTENTS

ISSN 1359-6640; ISBN 978-1-84973-232-1

Cover

See Solomon *et al.*, *Faraday Discuss.*, 2011, **148**, 11–39.

Chimera of (clockwise from upper left) tyrosinase, peptidylglycine α -hydroxylating monooxygenase, p-methane monooxygenase and laccase emphasizing the correlation of spectroscopy to electronic and geometric structure to mechanism in bioinorganic chemistry.

Image reproduced by permission of Professor Edward I. Solomon, from *Faraday Discuss.*, 2011, **148**, 11.

PREFACE

9 Preface

INTRODUCTORY LECTURE

11 Copper dioxygen (bio)inorganic chemistry

Edward I. Solomon, Jake W. Ginsbach, David E. Heppner, Matthew T. Kieber-Emmons, Christian H. Kjaergaard, Pieter J. Smeets, Li Tian and Julia S. Woertink

PAPERS AND DISCUSSIONS

41 Reductive cleavage of the O–O bond in multicopper oxidases: a QM/MM and QM study

Martin Srnec, Ulf Ryde and Lubomír Rulišek

- 55 **Theoretical simulation of the spectroscopy and dynamics of a red copper protein**
Nicholas A. Besley and David Robinson
- 71 **Relating dynamic protein interactions of metallochaperones with metal transfer at the single-molecule level**
Jaime J. Benitez, Aaron M. Keller, David L. Huffman, Liliya A. Yatsunyk, Amy C. Rosenzweig and Peng Chen
- 83 **Proton-coupled electron transfers in biomimetic water bound metal complexes. The electrochemical approach**
Elodie Anxolabéhère-Mallart, Cyrille Costentin, Clotilde Policar, Marc Robert, Jean-Michel Savéant and Anne-Lucie Teillout
- 97 **General discussion**
- 109 **Comparison of QM-only and QM/MM models for the mechanism of tyrosinase**
Per E. M. Siegbahn and Tomasz Borowski
- 119 **An enquiry into theoretical bioinorganic chemistry: How heuristic is the character of present-day quantum chemical methods?**
Maren Podewitz, Martin T. Stiebritz and Markus Reiher
- 137 **What can molecular modelling bring to the design of artificial inorganic cofactors?**
Victor Muñoz Robles, Elisabeth Ortega-Carrasco, Eric González Fuentes, Agustí Lledós and Jean-Didier Maréchal
- 161 **Channeling of electrons within SLAC, the small laccase from *Streptomyces coelicolor***
Armand W. J. W. Tepper, Thijs J. Aartsma and Gerard W. Canters
- 173 **Continuum electrostatic investigations of charge transfer processes in biological molecules using a microstate description**
Elisa Bombarda and G. Matthias Ullmann
- 195 **How do enzymes reduce metals? The mechanism of the reduction of Cr(VI) in chromate by cytochrome *c*₇ proteins proposed from DFT calculations**
Mahesh Sundararajan, Andrew J. Campbell and Ian H. Hillier
- 207 **General discussion**
- 229 **What is not required to make a single molecule magnet**
Frank Neese and Dimitrios A. Pantazis
- 239 **Resonance Raman study on the oxygenated and the ferryl-oxo species of indoleamine 2,3-dioxygenase during catalytic turnover**
Sachiko Yanagisawa, Masaki Horitani, Hiroshi Sugimoto, Yoshitsugu Shiro, Norihiro Okada and Takashi Ogura
- 249 **Implications for the mechanism of sulfite oxidizing enzymes from pulsed EPR spectroscopy and DFT calculations for “difficult” nuclei**
John H. Enemark, Arnold M. Raitsimring, Andrei V. Astashkin and Eric L. Klein
- 269 **Dissecting the mechanism of oxygen trafficking in a metalloenzyme**
Mark A. Smith, Peter F. Knowles, Michael J. McPherson and Arwen R. Pearson
- 283 **Prediction of nitroxide spin label EPR spectra from MD trajectories: application to myoglobin**
Egidijus Kuprusevicius, Gaye White and Vasily S. Oganessian
- 299 **General discussion**

- 315 **Elucidating mechanisms in haem copper oxidases: The high-affinity Q_{II} binding site in quinol oxidase as studied by DONUT-HYSCORE spectroscopy and density functional theory**
Fraser MacMillan, Sylwia Kacprzak, Petra Hellwig, Stephane Grimaldi, Hartmut Michel and Martin Kaupp
- 345 **Development of an infrared spectroscopic approach for studying metalloenzyme active site chemistry under direct electrochemical control**
Adam J. Healy, Holly A. Reeve and Kylie A. Vincent
- 359 **Protonation of [FeFe]-hydrogenase sub-site analogues: revealing mechanism using FTIR stopped-flow techniques**
Joseph A. Wright, Lee Webster, Aušra Jablonskytė, Pei Meng Woi, Saad K. Ibrahim and Christopher J. Pickett
- 373 **Water as biocatalyst in cytochrome P450**
Devesh Kumar, Ahmet Altun, Sason Shaik and Walter Thiel
- 385 **The quest for a functional substrate access tunnel in FeFe hydrogenase**
Thomas Lautier, Pierre Ezanno, Carole Baffert, Vincent Fourmond, Laurent Cournac, Juan C. Fontecilla-Camps, Philippe Soucaille, Patrick Bertrand, Isabelle Meynial-Salles and Christophe Léger
- 409 **Fe–H/D stretching and bending modes in nuclear resonant vibrational, Raman and infrared spectroscopies: Comparisons of density functional theory and experiment**
Vladimir Pelmenschikov, Yisong Guo, Hongxin Wang, Stephen P. Cramer and David A. Case
- 421 **General discussion**

CONCLUDING REMARKS

- 443 **Engineering enzymes**
P. Leslie Dutton and Christopher C. Moser

ADDITIONAL INFORMATION

- 449 **Poster titles**
- 453 **List of participants**
- 455 **Index of contributors**
