

# Game Theory for Wireless Engineers

**Allen B. MacKenzie and Luiz A. DaSilva**  
Virginia Polytechnic Institute and State University

*SYNTHESIS LECTURES ON COMMUNICATIONS #1*

# Contents

|       |  |    |
|-------|--|----|
| 1.    | Introduction to Game Theory .....  | 1  |
| 1.1   | What is Game Theory? .....   | 1  |
| 1.2   | Where Did Game Theory Come From? .....   | 3  |
| 1.3   | Why is Game Theory Relevant to Wireless<br>Communications and Networking? .....        | 4  |
| 1.4   | How Can I Use Game Theory Properly? .....  | 5  |
| 1.5   | Introduction to Examples .....   | 7  |
| 1.5.1 | Power Control .....  | 7  |
| 1.5.2 | Routing .....  | 8  |
| 1.5.3 | Trust Management .....   | 9  |
| 1.6   | Notation .....   | 10 |
| 1.7   | Outline of Remaining Chapters .....  | 10 |
| 2.    | Decision Making and Utility Theory .....   | 13 |
| 2.1   | Preference Relationships .....   | 13 |
| 2.2   | Existence of Ordinal Utility Representations .....                                     | 14 |
| 2.2.1 | Finite $X$ .....   | 15 |
| 2.2.2 | Countable $X$ .....  | 16 |
| 2.2.3 | Uncountable $X$ .....  | 16 |
| 2.2.4 | Uniqueness of Utility Functions .....  | 18 |
| 2.3   | Preferences Over Lotteries .....   | 19 |
| 2.3.1 | The von Neumann–Morgenstern Axioms .....   | 20 |
| 2.3.2 | Von Neumann–Morgenstern and the<br>Existence of Cardinal Utility Representations ..... | 22 |
| 2.4   | Other Visions of Expected Utility Representations .....                                | 25 |
| 2.5   | Conclusion .....   | 27 |
| 3.    | Strategic Form Games .....   | 29 |
| 3.1   | Definition of a Strategic Form Game .....  | 29 |
| 3.2   | Dominated Strategies and Iterative Deletion of Dominated Strategies .....              | 31 |
| 3.3   | Mixed Strategies .....   | 32 |

|       |  |    |
|-------|--|----|
| 3.4   | Nash Equilibrium .....   | 33 |
| 3.4.1 | Dealing with Mixed Strategies .....                              | 34 |
| 3.4.2 | Discussion of Nash Equilibrium .....                             | 35 |
| 3.5   | Existence of Nash Equilibria .....                               | 35 |
| 3.6   | Applications .....   | 39 |
| 3.6.1 | Pricing of Network Resources .....                               | 39 |
| 3.6.2 | Flow Control .....   | 41 |
| 4.    | Repeated and Markov Games .....                                  | 43 |
| 4.1   | Repeated Games .....   | 43 |
| 4.1.1 | Extensive Form Representation .....                              | 44 |
| 4.1.2 | Equilibria in Repeated Games .....                               | 45 |
| 4.1.3 | Repeated Games in Strategic Form .....                           | 46 |
| 4.1.4 | Node Cooperation: A Repeated Game Example .....                  | 47 |
| 4.1.5 | The “Folk Theorems” .....  | 50 |
| 4.2   | Markov Games: Generalizing the Repeated Game Idea .....          | 52 |
| 4.3   | Applications .....   | 53 |
| 4.3.1 | Power Control in Cellular Networks .....                         | 53 |
| 4.3.2 | Medium Access Control .....                                      | 54 |
| 5.    | Convergence to Equilibrium: Potential Games .....                | 57 |
| 5.1   | The “Best Reply” and “Better Reply” Dynamics .....               | 57 |
| 5.2   | Potential Games .....  | 60 |
| 5.2.1 | Definition and Basic Properties .....                            | 60 |
| 5.2.2 | Convergence .....  | 61 |
| 5.2.3 | Identification .....   | 62 |
| 5.2.4 | Interpretation .....   | 63 |
| 5.3   | Application: Interference Avoidance .....                        | 64 |
| 6.    | Future Directions .....  | 65 |
| 6.1   | Related Research on Wireless Communications and Networking ..... | 65 |
| 6.1.1 | The Role of Information on Distributed Decisions .....           | 65 |
| 6.1.2 | Cognitive Radios and Learning .....                              | 67 |
| 6.1.3 | Emergent Behavior .....  | 67 |
| 6.1.4 | Mechanism Design .....   | 68 |
| 6.1.5 | Modeling of Mobility .....                                       | 68 |
| 6.1.6 | Cooperation in Wireless Systems and Networks .....               | 68 |
| 6.2   | Conclusions .....  | 69 |
