Contents

Chapter 1	Preliminaries	21
1.1	Reasons for Studying Concepts of Programming Languages.....	22
1.2	Programming Domains.....	25
1.3	Language Evaluation Criteria	27
1.4	Influences on Language Design	38
1.5	<i>Language Categories</i>	41
1.6	Language Design Trade-Offs	43
1.7	Implementation Methods.....	43
1.8	Programming Environments	51
	Summary • Review Questions • Problem Set.....	51
Chapter 2	Evolution of the Major Programming Languages	55
2.1	Zuse’s Plankalkül	58
2.2	Pseudocodes.....	59
2.3	The IBM 704 and Fortran.....	62
2.4	Functional Programming: LISP.....	67
2.5	The First Step Toward Sophistication: ALGOL 60	72
2.6	Computerizing Business Records: COBOL.....	78
2.7	The Beginnings of Timesharing: BASIC	83
	Interview: ALAN COOPER—User Design and Language Design.....	86
2.8	Everything for Everybody: PL/I	88
2.9	Two Early Dynamic Languages: APL and SNOBOL	91
2.10	The Beginnings of Data Abstraction: SIMULA 67	92
2.11	Orthogonal Design: ALGOL 68	93
2.12	Some Early Descendants of the ALGOLs.....	95

2.13	Programming Based on Logic: Prolog.....	99
2.14	History's Largest Design Effort: Ada.....	101
2.15	Object-Oriented Programming: Smalltalk.....	105
2.16	Combining Imperative and Object-Oriented Features: C++.....	108
2.17	An Imperative-Based Object-Oriented Language: Java	111
2.18	Scripting Languages.....	115
2.19	The Flagship .NET Language: C#	121
2.20	Markup/Programming Hybrid Languages	124
	Summary • Bibliographic Notes • Review Questions • Problem Set • Programming Exercises.....	126
Chapter 3	Describing Syntax and Semantics	133
3.1	Introduction.....	134
3.2	The General Problem of Describing Syntax.....	135
3.3	Formal Methods of Describing Syntax.....	137
3.4	Attribute Grammars.....	152
	History Note	153
3.5	Describing the Meanings of Programs: Dynamic Semantics.....	159
	History Note	174
	Summary • Bibliographic Notes • Review Questions • Problem Set.....	181
Chapter 4	Lexical and Syntax Analysis	187
4.1	Introduction.....	188
4.2	Lexical Analysis.....	189
4.3	The Parsing Problem.....	197
4.4	Recursive-Descent Parsing.....	201
4.5	Bottom-Up Parsing.....	210
	Summary • Review Questions • Problem Set • Programming Exercises.....	217
Chapter 5	Names, Bindings, and Scopes	223
5.1	Introduction.....	224
5.2	Names.....	225
	History Note	225

5.3	Variables	227
5.4	The Concept of Binding	229
5.5	Scope	238
5.6	Scope and Lifetime	249
5.7	Referencing Environments	250
5.8	Named Constants	252
	Summary • Review Questions • Problem Set • Programming Exercises.....	254
Chapter 6	Data Types	263
6.1	Introduction.....	264
6.2	Primitive Data Types	266
6.3	Character String Types	270
	History Note	271
6.4	User-Defined Ordinal Types	275
6.5	Array Types.....	279
	History Note	280
	History Note	281
6.6	Associative Arrays.....	292
	Interview: ROBERTO IERUSALIMSKY—Lua	294
6.7	Record Types.....	296
6.8	Tuple Types	300
6.9	List Types	301
6.10	Union Types	304
6.11	Pointer and Reference Types	309
	History Note	313
6.12	Type Checking.....	322
6.13	Strong Typing.....	323
6.14	Type Equivalence.....	324
6.15	Theory and Data Types	328
	Summary • Bibliographic Notes • Review Questions • Problem Set • Programming Exercises.....	330

Chapter 7	Expressions and Assignment Statements	337
7.1	Introduction.....	338
7.2	Arithmetic Expressions	338
7.3	Overloaded Operators	348
7.4	Type Conversions.....	349
	History Note	352
7.5	Relational and Boolean Expressions.....	352
	History Note	353
7.6	Short-Circuit Evaluation	355
7.7	Assignment Statements	356
	History Note	360
7.8	Mixed-Mode Assignment	361
	Summary • Review Questions • Problem Set • Programming Exercises.....	361
Chapter 8	Statement-Level Control Structures	367
8.1	Introduction.....	368
8.2	Selection Statements.....	370
8.3	Iterative Statements.....	382
8.4	Unconditional Branching	395
	History Note	396
8.5	Guarded Commands	396
8.6	Conclusions.....	399
	Summary • Review Questions • Problem Set • Programming Exercises.....	400
Chapter 9	Subprograms	407
9.1	Introduction.....	408
9.2	Fundamentals of Subprograms	408
9.3	Design Issues for Subprograms	416
9.4	Local Referencing Environments.....	417
9.5	Parameter-Passing Methods	419
	History Note	427
	History Note	427

	9.6	Parameters That Are Subprograms	437
	9.7	Calling Subprograms Indirectly.....	439
		History Note	439
	9.8	Overloaded Subprograms.....	441
	9.9	Generic Subprograms	442
	9.10	Design Issues for Functions	448
	9.11	User-Defined Overloaded Operators	450
	9.12	Closures	450
	9.13	Coroutines	452
		Summary • Review Questions • Problem Set • Programming Exercises.....	455
Chapter 10		Implementing Subprograms	461
	10.1	The General Semantics of Calls and Returns.....	462
	10.2	Implementing “Simple” Subprograms	463
	10.3	Implementing Subprograms with Stack-Dynamic Local Variables... ..	465
	10.4	Nested Subprograms	474
	10.5	Blocks	480
	10.6	Implementing Dynamic Scoping.....	482
		Summary • Review Questions • Problem Set • Programming Exercises.....	486
Chapter 11		Abstract Data Types and Encapsulation Constructs	493
	11.1	The Concept of Abstraction	494
	11.2	Introduction to Data Abstraction	495
	11.3	Design Issues for Abstract Data Types	498
	11.4	Language Examples	499
		Interview: BJARNE STROUSTRUP—C++: Its Birth, Its Ubiquitousness, and Common Criticisms	500
	11.5	Parameterized Abstract Data Types.....	523
	11.6	Encapsulation Constructs	529
	11.7	Naming Encapsulations	533
		Summary • Review Questions • Problem Set • Programming Exercises.....	537

Chapter 12	Support for Object-Oriented Programming	543
12.1	Introduction.....	544
12.2	Object-Oriented Programming	545
12.3	Design Issues for Object-Oriented Languages.....	549
12.4	Support for Object-Oriented Programming in Smalltalk.....	554
	Interview: BJARNE STROUSTRUP—On Paradigms and Better Programming	556
12.5	Support for Object-Oriented Programming in C++.....	558
12.6	Support for Object-Oriented Programming in Objective-C	569
12.7	Support for Object-Oriented Programming in Java.....	572
12.8	Support for Object-Oriented Programming in C#.....	576
12.9	Support for Object-Oriented Programming in Ada 95	578
12.10	Support for Object-Oriented Programming in Ruby.....	583
12.11	Implementation of Object-Oriented Constructs.....	586
	Summary • Review Questions • Problem Set • Programming Exercises	589
Chapter 13	Concurrency	595
13.1	Introduction.....	596
13.2	Introduction to Subprogram-Level Concurrency.....	601
13.3	Semaphores.....	606
13.4	Monitors.....	611
13.5	Message Passing	613
13.6	Ada Support for Concurrency	614
13.7	Java Threads.....	623
13.8	C# Threads	633
13.9	Concurrency in Functional Languages.....	638
13.10	Statement-Level Concurrency	641
	Summary • Bibliographic Notes • Review Questions • Problem Set • Programming Exercises.....	643

Chapter 14	Exception Handling and Event Handling	649
14.1	Introduction to Exception Handling	650
	History Note	654
14.2	Exception Handling in Ada	656
14.3	Exception Handling in C++	663
14.4	Exception Handling in Java	667
14.5	Introduction to Event Handling	675
14.6	Event Handling with Java	676
14.7	Event Handling in C#	681
	Summary • Bibliographic Notes • Review Questions • Problem Set • Programming Exercises	684
Chapter 15	Functional Programming Languages	691
15.1	Introduction	692
15.2	Mathematical Functions	693
15.3	Fundamentals of Functional Programming Languages	696
15.4	The First Functional Programming Language: LISP	697
15.5	An Introduction to Scheme	701
15.6	Common LISP	719
15.7	ML	721
15.8	Haskell	727
15.9	F#	732
15.10	Support for Functional Programming in Primarily Imperative Languages	735
15.11	A Comparison of Functional and Imperative Languages	737
	Summary • Bibliographic Notes • Review Questions • Problem Set • Programming Exercises	740
Chapter 16	Logic Programming Languages	747
16.1	Introduction	748
16.2	A Brief Introduction to Predicate Calculus	748
16.3	Predicate Calculus and Proving Theorems	752

16.4	An Overview of Logic Programming	754
16.5	The Origins of Prolog	756
16.6	The Basic Elements of Prolog.....	756
16.7	Deficiencies of Prolog	771
16.8	Applications of Logic Programming	777
	Summary • Bibliographic Notes • Review Questions • Problem Set • Programming Exercises.....	778
	Bibliography	783
	Index.....	793
