Contents

<i>Preface</i>	vii
1. Introduction	1
1.1 Wherefore EFT?	1
1.2 EFT vs MFT	3
1.3 An example from Newton	4
1.4 A theorem of Weinberg	6
1.5 Organization of the book	7
2. Symmetries	9
2.1 Introduction	9
2.2 Noether's Theorem	9
2.3 Examples of Noether currents	11
2.4 Gauged symmetries and Noether's procedure	13
2.5 Broken symmetries and Goldstone's Theorem	15
2.5.1 Nonrelativistic NG-bosons	18
2.6 The BEHGHK Mechanism of Anderson	20
2.6.1 A little history	21
2.6.2 An example	23
2.6.3 An interlude: superconductivity	25
2.7 CCWZ construction of EFT	27
2.8 Explicit breaking; spurion analysis	30
2.9 Anomalous symmetries	32
2.9.1 Anomalies in the path integral	33
2.9.2 The chiral anomaly and its consequences	35
2.9.3 't Hooft anomaly matching	37

2.10 Notes for further reading	38
3. Elementary Techniques	41
3.1 Canonical (engineering) dimensions	41
3.1.1 Dimensional analysis	41
3.1.2 Example: hydrogen atom	44
3.2 Dimensional transmutation	46
3.3 Callan-Symanzik Equation	49
3.4 The renormalization group	53
3.4.1 Engineering dimensions of $\Gamma^{(n)}$	53
3.4.2 Physics of the anomalous dimension	54
3.5 Renormalizability and Effective Field Theory	57
3.5.1 Dropping renormalizability	57
3.5.2 Matching	57
3.6 Subtraction schemes as part of EFT definition	58
3.7 Decoupling. Appelquist-Carrazzone theorem in various schemes	60
3.8 Notes for further reading	63
4. Effective Field Theories of Type I	65
4.1 Introduction	65
4.2 Real physics: Euler-Heisenberg Lagrangian	70
4.3 Fermi Theory of Weak Interactions as an effective theory	71
4.4 Fermi theory to one loop: $\Delta S = 2$ processes in EFT	73
4.4.1 Setting up the EFT approach	74
4.4.2 A more detailed calculation	76
4.5 QCD corrections in EFTs	78
4.5.1 Matching at one loop in QCD	79
4.5.2 Renormalization group improvement and EFTs	83
4.5.3 Complete basis. Penguin operators	85
4.6 Chiral perturbation theory	88
4.6.1 Goldstone bosons and their properties	90
4.6.2 Sources in chiral perturbation theory	93
4.6.3 Applications: Gell-Mann-Okubo relation	97
4.6.4 Power counting. Chiral loops and higher orders in χ PT	99
4.6.5 Naive dimensional analysis	101
4.6.6 Baryons and chiral perturbation theory	103

4.7	Notes for further reading	104
5.	Effective Field Theories of Type II. Part A.	107
5.1	Introduction	107
5.2	Heavy Quark Effective Theory	108
5.2.1	Quantum mechanics of heavy particles	109
5.2.2	From quantum mechanics to field theory: HQET. Field redefinitions	111
5.2.3	Spin symmetry and its consequences	115
5.2.4	More symmetry: reparameterization invariance .	117
5.2.5	HQET Green's functions. Radiative corrections .	118
5.2.6	External currents and external states	122
5.3	Different degrees of freedom: heavy mesons	130
5.3.1	Heavy meson states. Tensor formalism	130
5.3.2	Leading-order Lagrangian	133
5.3.3	Subleading Lagrangians	134
5.3.4	Calculations with HH χ PT	135
5.4	Light baryons in heavy particle formalism	139
5.4.1	Leading-order Lagrangian	139
5.5	Notes for further reading	142
6.	Effective Field Theories of Type-II. Part B.	145
6.1	Introduction. Non-relativistic QED and QCD	145
6.2	NRQCD Lagrangian at the scale m_Q	147
6.3	Going down: non-perturbative scales $m_Q v$ and $m_Q v^2$. . .	151
6.3.1	Electromagnetic decays of the η_c	155
6.3.2	Inclusive decays of the η_c into light hadrons . . .	156
6.3.3	Inclusive decays of the χ_{cJ} into light hadrons . .	158
6.4	Going down: perturbative scales $m_Q v$ and $m_Q v^2$. pNRQCD	160
6.4.1	Example: heavy quarkonium potential	161
6.5	Different degrees of freedom: hadronic molecules	163
6.6	Notes for further reading	168
7.	Effective Field Theories of Type-III. Fast Particles in Effective Theories	171
7.1	Infrared divergences	171
7.2	Soft-Collinear Effective Theory	174

7.2.1	Quantum mechanics of fast particles	174
7.2.2	SCET power counting	175
7.2.3	SCET action	178
7.3	Symmetries of SCET	182
7.3.1	Gauge invariance	182
7.3.2	Reparametrization invariance	184
7.4	Examples	185
7.4.1	$B \rightarrow X_s \gamma$	185
7.4.2	$B \rightarrow D\pi$	188
7.4.3	Deep Inelastic Scattering	191
7.4.4	Jet production	197
7.5	Notes for further reading	199
8.	Standard Model as an Effective Field Theory	203
8.1	Introduction	203
8.2	Standard model as the leading term in the EFT expansion	205
8.2.1	Dimension-5 operators: fermion number violation	206
8.2.2	Dimension-6 operators: parameterizing new physics	208
8.2.3	Experimental tests and observables	209
8.3	BSM particles in EFT	211
8.3.1	Dark matter at colliders: effective operators . . .	212
8.3.2	Mono-Higgs signatures of dark matter at LHC . .	213
8.4	Notes for further reading	217
9.	Effective Field Theories of Gravity	219
9.1	Introduction	219
9.2	Review of general relativity	221
9.2.1	Geodesics and affine connection	221
9.2.2	General relativity and the weak field limit . . .	222
9.2.3	Gravity sources: energy-momentum tensor . . .	226
9.3	Building an effective field theory	227
9.3.1	Quantization. Feynman rules	228
9.3.2	Quantum EFT for gravity	231
9.3.3	Newtonian potential	233
9.3.4	Postscript	234
9.4	Classical EFT: NRGR	235
9.4.1	Setting up the problem	236

9.4.2	Gravition modes	238
9.4.3	Feynman rules	241
9.4.4	Gravitational radiation	242
9.4.5	Renormalization	245
9.5	Notes for further reading	247
10.	Outlook	249
10.1	Supersymmetry	249
10.2	Extra dimensions	250
10.3	Technicolor and compositeness	251
10.4	High- T_c superconductivity	252
Appendix A Review of Group Theory		253
A.1	General definitions	253
A.2	Continuous groups	255
A.3	Representation theory of Lie groups	258
A.4	Young Tableaux for $SU(N)$	262
A.5	Group theory coefficients	266
A.6	Notes for further reading	267
Appendix B Short Review of QED and QCD		269
B.1	Quantum electrodynamics	269
B.2	Quantum chromodynamics	270
B.2.1	QCD Lagrangian and Feynman rules	271
B.2.2	Symmetries of the QCD Lagrangian	277
Appendix C Useful Features of Dimensional Regularization		279
C.1	Overview of dimensional regularization	279
C.2	Useful formulas	280
C.3	Dimensional regularization vs other schemes	282
C.4	Advanced features: scaleless integrals	283
C.5	Advanced features: integration by parts	285
C.6	Advanced features: method of regions	287
<i>Bibliography</i>		291
<i>Index</i>		301
