

Hans Wilhelm Knobloch

# Disturbance Attenuation for Uncertain Control Systems

With Contributions by Alberto Isidori  
and Dietrich Flockerzi

# Contents

<b>1</b>	<b>About this Lecture Note</b> .....	<b>1</b>
1.1	Adaptive Control .....	1
1.2	Worst Case Design .....	5
1.3	Dissipation Inequalities .....	7
1.4	Summary .....	8
	References .....	8
<b>2</b>	<b>Dissipation Inequalities and Nonlinear <math>H_\infty</math>-Theory</b> .....	<b>11</b>
2.1	Introduction .....	11
2.2	Preliminaries .....	14
2.3	Hamilton–Jacobi PDEs and Dissipation Inequalities .....	20
2.4	Local Solutions of Hamilton–Jacobi PDEs .....	23
2.5	Alternatives for Affine–Quadratic Systems .....	29
2.6	Bounds for Riccati–Solutions .....	36
2.7	Summary .....	39
	References .....	41
<b>3</b>	<b>Dissipation Inequalities: An Alternative Approach</b> .....	<b>43</b>
3.1	Introduction .....	43
3.2	The Basic Inequality .....	45
3.3	Solving the HJDE (3.13) .....	50
3.4	Solution of the HJDE (3.13). Further Properties .....	58
3.5	Attenuation of Bounded Disturbances .....	61
3.6	Discussion of Previous Results (Section 1 – 4) continued. ....	71
3.7	Discussion of Theorem 3.1. Discretization and Robustness ....	80
3.8	Additional Observations and Remarks: Main Result .....	86
3.9	Application to the Regulator Design Problem .....	92
	Appendix 1: Higher Order Inequalities .....	94
	References .....	104

<b>4</b>	<b>A Unified Approach to Problems of Asymptotic Tracking and Disturbance Rejection</b>	<b>105</b>
4.1	Introduction	105
4.2	The Plant and the Basic Assumptions	106
4.3	The Control	108
4.4	The Structure of the Core Subsystem	111
4.5	The Asymptotic Properties of the Core Subsystem	115
4.5.1	Stability of the Filter	115
4.5.2	Design for Minimum-Phase Plants	117
4.5.3	Taking Advantage of the Degrees of Freedom in the Filter	118
4.5.4	Examples of Design for Non-minimum-phase Plants	121
	References	125
<b>5</b>	<b>Disturbance Attenuation in Control Systems, Part II</b>	<b>127</b>
5.1	Introduction	127
5.2	The General Dissipation Equality	130
5.3	Discussion of Corollary 5.3 for a Special $r(t)$	141
5.4	Linearization of the DE (5.95)	156
5.5	The Case of an Uncertain Initial Value for $x_1$	161
5.6	Employing the Feedback Transformation (5.172), (5.173)	167
5.7	Prediction of $x, w$ on Short Time Intervals	176
5.8	Long- Horizon- Prediction of $x, w$	202
5.9	Construction of DE's along the Lines Presented in Section 5.1-5.4. Further Results	222
5.10	A Simplified Version of Material Presented in Section 5.7, 5.8, Part I	235
5.11	A Simplified Version of Material from Section 5.7, 5.8, Part II	252
5.12	A Simplified Version of Material from Section 5.7, 5.8, Part III	259
	Appendix 2: Proof of Theorem 5.1	266
	Appendix 3: Solution of the Integral Equation (5.67)	274
	Appendix 4: Auxiliary Results from ode. Theory	279
	A4.1 (Second Order) Volterra-Fliess Expansion	279
	A4.2 A Gronwall-Type Result	280
	A4.3 A Lyapunov-Type Result	282
	Appendix 5: Local Solutions of Integral Equations	286
	Appendix 6: Miscellaneous Auxiliary Results	289
	A6.1 The Implicit Function Theorem (abbr. IFT)	289
	A6.2 Symmetric and Skew-symmetric Matrices	292
	A6.3 Linear Matrix Equations	294
	A6.4 Multiple Real Eigenvalues	295
	A6.5 Locus of a Point Relative to a Subspace	297
	A6.6 Formal Relations	298

Appendix 7: An Interpolation Problem for Symmetric Matrices . . . .	300
Appendix 8: Evaluation of Definite Integrals . . . . .	305
Appendix 9: Hamiltonian Formalism . . . . .	307
Appendix 10: List of Symbols . . . . .	309
References . . . . .	311
