

THE SCIENTIFIC BASIS OF FILTRATION

edited by

K. J. IVES

Professor of civil engineering
Department of Civil and Municipal Engineering
University College London, U.K.

RN 3083 (2)

TABLE OF CONTENTS

K. J. Ives		
Introduction		1
D. C. Freshwater		
Particle Characterisation		3
D. C. Freshwater		
Definitions of Efficiency of Filtration Processes		39
J. Gregory		
Interfacial Phenomena		53
R. J. Akers		
Filtration Pretreatment		91
X L. A. Spielman		
Flow through Porous Media and Fluid-Particle Hydrodynamics		129
D. Leclerc		
Characteristics of Unconsolidated Filter Media		151
X D. Leclerc		
Permeability of Filter Media		167
X K. J. Ives		
Capture Mechanisms in Filtration		183
K. J. Ives		
Mathematical Models of Deep Bed Filtration		203
E. R. Baumann		
Least Cost Design — Optimization of Deep Bed Filters		225

VI

	J. L. Cleasby, A. Amirtharajah and E. R. Baumann Backwash of Granular Filters	255
X	A. Rushton Filter Media	273
	P. M. Heertjes Formation of Filter Cakes and Precoats	297
X	F. M. Tiller Compressible Cake Filtration	315
	A. S. Ward Brief Notes on the Washing of Filter Cakes	399
	C. Alt Practical Problems in Choosing Filtration Process, and Future Developments	411
