- **Introduction** xx
  - Chapter Descriptions xx
  - Source Code xxi
- **Chapter 1: Introduction** 1
  - Introducing Windows Server AppFabric 1
    - Evolution of Distributed Applications 2
      - Difference Between Components and Services 2
      - Service Hosting Environment 2
      - Problems to Be Solved 3
    - Getting to AppFabric 4
    - Enough Already! What is AppFabric? 4
    - Who Is the Target Customer? 5
  - AppFabric Component Architecture 5
  - Key Scenarios Addressed by AppFabric 8
    - Composite Applications 8
      - Defining a Composite Application 8
      - Why Deploy Composite Applications? 8

Integration Applications 9
The Roadmap for AppFabric 9
Business Scenario 10
Summary 12
Chapter 2: Choosing AppFabric 13
BizTalk as an Integration Server 14
AppFabric as an Application Server 16
AppFabric and BizTalk: Friends or Enemies? 17
When to Choose AppFabric 17
When to Choose BizTalk Server 18
Key Differentiating Points 21
Points of Difference in the Overlap 23
BizTalk Server Adapters 23
Message-Based Correlation 23
Content-Based Routing 24
Long-Running Transaction Support 24
State Management 25
Tracking 25
Using AppFabric and BizTalk Server Together 25
Example 1: BizTalk Server with ESB and AppFabric 26
Example 2: BizTalk Server and AppFabric 27
Example 3: BizTalk Server and AppFabric 27
BizTalk Server or AppFabric 27
Cost Considerations 27
Planning for BizTalk Server vNext and AppFabric 28
Summary 29

Chapter 3: Laying the Foundation 31
Reviewing the Methods for Hosting a Service 31
Understanding IIS Architectural Changes 34
IIS 6 Architecture 34
IIS 7 Architecture 36
Installing WAS 37
Installing Activation Components 38
Configuring Site Bindings 41
Managing Protocols for Individual Applications 42
Creating an IIS 7 Application 42
Adding Protocols for an Application 43
Listing the Protocols for an Application 44
Removing Application Protocols 44
Access and Processing Considerations 45
Creating and Connecting to a Service 46
Understanding the .svc File 46
Creating a Service 47
Creating a Client 49
Incorporating Additional Protocols 50
Is WAS the Be All End All? 51
Summary 52
Chapter 4: Understanding the Architecture 53
AppFabric Architecture in a Nutshell 53
New Requirements 54
Foundation and Core Services 55
Runtime Components 56
Human Interface Layers 57

Visual Studio Support and Oslo 57
Visual Studio 57
Oslo 58
System Center Operational Management 58
Persistence Services 58
Review of Persistence: WF 3.5 vs. WF 4.0 59
Persistence Components in AppFabric 60
Persistence Components from .NET Framework 4.0 61
Persistence Components Specific to AppFabric 63
Hosting Services 65
Hosting Components from .NET 4.0 65
Hosting Components Specific to AppFabric 67
Monitoring Services 68
Tracking Profiles 69
Tracking Participants 71
Consumption of Tracking Data 72
Other Tracking and Monitoring Features 74
Caching Services 75
AppFabric Cache API 77
AppFabric Caching Services Session Store Provider 78
Stitching It All Together 81
New Service Activation 82
Integrity 83
Exception Handling 84
Suspension 84
Diagnostics 84
Visual Tools and Performance Counters 86
Summary 86

Chapter 5: Configuring AppFabric 87

Task 1: Preparing Your Computer for Installation 87

Step 1: Verify Hardware Requirements 88

Step 2: Verify Software Requirements 88

Step 3: Understanding the Impact 90

Security 91

Remote Databases 92

Remote Management 92

Task 2: Install Software Prerequisites 92

Step 1: Install Critical Windows Updates 92

Step 2: Install the Required Hotfixes 93

Step 3: Install the IIS 7.0 Administration Pack 94

Step 4: Install Windows PowerShell v2.0 95

Step 5: Install Microsoft SQL Server 2008 Express 96

Step 6: Install Microsoft Visual Studio 2010 98

Step 7: Install the Web Deployment Tool 99

Step 8: Install AppFabric Caching Services 100

Task 3: Install and Configure AppFabric 101

Step 1: Install AppFabric 102

Step 2: Configure AppFabric 104

Step 3: Start Cache Host Services 111

Step 4: Verifying Successful Installation of AppFabric 112

Summary: What Did I Just Do? 113

Chapter 6: Developing WCF Applications with AppFabric 115

Incorporating the Business Scenario 115

Architectural Challenges of a Phase I Approach 118

WCF 4.0's New Default Features 119

Default Endpoints 119
Creating a Default Endpoint 119
How Does It Work? 122
Default Bindings 123
Default Behaviors 124
Standard Endpoints 125
Enabling Dynamic Service Discovery in WCF 4.0 127
Ad Hoc Service Discovery 127
Using Scopes When Discovering Endpoints 131
Service Announcements 133
On the Service Side 134
On the Client Side 135
Managed Service Discovery 137
Summary 143
Chapter 7: Developing WF Applications 145
What's New in WorkFlow 4.0 145
Incorporating the Business Scenario 146
Creating a Workflow 148
Methods for Creation 148
An Example 148
Creating an Activity 149
Gaining Greater Control 151
Creating a Sequence Workflow 151
Passing Data 154
How Data Is Stored 154
An Example—Passing a Dictionary Object 155
Getting the Result 156

Using WCF End Points for Workflows 157
Receive and SendReply Activities 157
Combining WF and WCF Code 158
Consuming an Endpoint 160
Adding Extensions 163
Tracking 163
Persistence 164
Tracking and Tracing Improvements 166
Summary 166
Chapter 8: Hosting in AppFabric 167
Deploying the Application to AppFabric 168
Adding a New Application Pool 168
Adding a New Web Site 169
Host Contoso WCF and WF Services 171
Deploying the Contoso WCF Services to AppFabric 172
Migrating to the WCF Service Application Project 173
Deploying a WCF Service Application 177
Making Other Required Modifications 181
Deploying a WF Service 183
Configuring the Contoso Claims Processing application in AppFabric 186
Deploy a Single Workflow Service 186
Configuring the Contoso Claims Processing Workflow Service 188
Adding the net.pipe Protocol 193
Enabling the net.pipe Protocol 195
Running the Application in AppFabric 196
Navigating to the AppFabric Dashboard 196
Invoking the Contoso Claims WCF and WF Services 200

Configuring the AppFabric Host for Troubleshooting 202
Enabling the Troubleshooting Tracking Level 203
Configuring the Action for an Unhandled Exception 204
Summary 205
Chapter 9: Deploying AppFabric Applications 207
Understanding the Tool 207
What You Get 207
The Underlying Foundation 208
Exporting an Application 208
Importing an Application 214
Managing and Deploying with PowerShell 218
Enable Execution 218
Review Available Commands 218
Learn to Pipe 220
Create Packages 222
Deploy Packages 224
Configure Application 225
Create Databases 225
Connection String 226
Reconfigure the Web Site 228
Consider Other Tasks 229
Summary 229
Chapter 10: Advanced Concepts 231
Content-Based Routing 231
Background and Motivation 231
Implementation 232
Determining What You Need 232
Defining Elements 233

Creating Filters and a Routing Table 234
Consuming the Configuration File 235
Dynamic Configuration 241
Error Handling 242
Message Correlation 243
Types of Correlation 243
Scope 244
Embedded Correlation 244
An Example 246
Long-Running Workflows 249
Compensation 251
Summary 253
Chapter 11: Monitoring and Tracking 255
Monitoring 255
The AppFabric Dashboard 255
Items that Affect Metric Counts 260
Setting the Monitoring Configuration Parameters 260
Choosing a Health Monitoring Level 261
Enabling Diagnostic Tracing and Message Logging 261
Archiving and Purging 263
The Automatic Method 263
The Manual Method 264
Associate a Destination Archive 264
Set the Archive Database Connection String 264
Purge from Monitoring Database 265
Remove Configuration Information 266
Remove Old Data 266

Tracking 268
Tracking Architecture 268
Tracking Profiles 269
Implementation Through Configuration 269
Implementation Through Code 271
Tracking Participants 272
Creating Your Own Tracking Participant 274
Summary 276
Chapter 12: Implementing High Availability 277
Planning for Scale-Out 277
Scaling Your AppFabric Persistence and Monitoring Databases 280
Expanding an AppFabric Server Farm 281
Failover Capabilities in AppFabric 282
Synchronizing AppFabric Servers 282
Prepare your Server Farm 282
Install Web Deployment Tool's Remote Agent Service 283
View Your AppFabric Hosted Application Dependencies 284
Configure the Destination Server 286
Sync to the Destination Server 286
Backing up Your Server 287
Simulating the Synchronization Process 287
Synchronizing for Real 288
Future Roadmap for AppFabric High Availability 289
BizTalk Server 289
Windows Azure 290
Summary 291
Chapter 13: Upgrading to AppFabric 293
Workflows 293

Activities 294
Workflow Host 294
Passing Data 294
Rules 295
Workflow Types 295
Summary 295
Index 297
