## CONTENTS

1	The Yearn to be Hermitian . . . . .	1
	<i>Rodney J. Bartlett, Monika Musiał, Victor Lotrich, and Tomasz Kuś</i>	
1.1	Introduction . . . . .	1
1.2	Coupled-Cluster Methods . . . . .	2
1.3	Origin of the CC Functional . . . . .	4
1.4	Hermitian Theories . . . . .	6
1.5	The Alternative of Generalized CC Perturbation Theory . . . . .	9
1.6	Results and Discussion . . . . .	27
1.7	Summary . . . . .	31
	References . . . . .	34
2	Reduced-Scaling Coupled-Cluster Theory for Response Properties of Large Molecules . . . . .	37
	<i>T. Daniel Crawford</i>	
2.1	Introduction . . . . .	37
2.2	Local Coupled Cluster Theory . . . . .	39
2.3	Local Coupled Cluster for Ground-State Molecular Response Properties . . . . .	42
2.3.1	The Equation-of-Motion and Response Theory Formulations . . . . .	42
2.3.2	Localized Orbital Domains and Response Properties . . . . .	46
2.4	Local Coupled Cluster Theory and Electronically Excited States . . . . .	49
2.5	Conclusions and Future Directions . . . . .	51
	References . . . . .	52
3	Development and Applications of Non-Perturbative Approximants to the State-Specific Multi-Reference Coupled Cluster Theory: The Two Distinct Variants . . . . .	57
	<i>Sanghamitra Das, Shubhrodeep Pathak, Rahul Maitra, and Debashis Mukherjee</i>	
3.1	Introduction . . . . .	58

3.2	A Brief Resume of the Parent SS-MRCC Theory . . . . .	60
3.2.1	Structure of the Working Equations . . . . .	60
3.3	The Uncoupled State-Specific MRCC Theory . . . . .	62
3.3.1	Discussion of the Simplification Leading to UC-SS-MRCC . . . . .	62
3.3.2	Relation Between sr-MRBWCCSD and UC-SS-MRCC . . . . .	64
3.4	Development of Size-Extensive Approximant to the SS-MRCC with Model-Space Independent Inactive Excitations . . . . .	65
3.4.1	Motivations and Insights for an Internally Contracted Inactive Excitation Scheme (ICI-SS-MRCC) . . . . .	65
3.4.2	Development of the General ICI-SS-MRCC Formalism . . . . .	67
3.5	Results and Discussion . . . . .	71
3.5.1	PES of Perpendicular Insertion of Be into H <sub>2</sub> . . . . .	71
3.5.2	Ground State PES of Li <sub>2</sub> Molecule . . . . .	72
3.5.3	The Lowest <sup>1</sup> A <sub>1</sub> State of CH <sub>2</sub> at Equilibrium Geometry . . . . .	73
3.5.4	Ground State of O <sub>3</sub> at Equilibrium Geometry . . . . .	75
3.6	Conclusion . . . . .	76
	References . . . . .	76
4	Development of SAC-CI General- <i>R</i> Method for Theoretical Fine Spectroscopy . . . . .	79
	<i>Masahiro Ehara and Hiroshi Nakatsuji</i>	
4.1	Introduction . . . . .	79
4.2	Theory . . . . .	82
4.2.1	SAC/SAC-CI Theory . . . . .	82
4.2.2	SAC-CI General- <i>R</i> Method . . . . .	85
4.2.3	Analytical Energy Gradients of SAC/SAC-CI . . . . .	88
4.3	Applications of SAC-CI General- <i>R</i> Method . . . . .	92
4.3.1	Inner-Valence Ionization Spectra and Doubly Excited States . . . . .	92
4.3.2	Excited-State Geometry of Two-Electron Processes . . . . .	99
4.3.3	Inner-Shell Electronic Processes . . . . .	103
4.4	Summary . . . . .	108
	References . . . . .	108
5	Relativistic Four-Component Multireference Coupled Cluster Methods: Towards a Covariant Approach . . . . .	113
	<i>Ephraim Eliav and Uzi Kaldor</i>	
5.1	Introduction . . . . .	113
5.1.1	Relativistic Many-Body Theory and QED . . . . .	114
5.1.2	The QED Hamiltonian . . . . .	115
5.1.3	The No-Virtual-Pair Approximation . . . . .	118

5.2	The NVPA Multiroot Multireference Fock-Space Coupled Cluster Method . . . . .	120
5.2.1	Basic FSCC Method . . . . .	120
5.2.2	The Intermediate Hamiltonian CC Method . . . . .	122
5.3	Applications: Heavy Elements . . . . .	127
5.3.1	Ionization Potentials and Electron Affinities of Alkali Atoms: 1 meV Accuracy . . . . .	128
5.3.2	The $f^2$ Levels of $\text{Pr}^{3+}$ : Dynamic Correlation . . . . .	129
5.3.3	Properties: Nuclear Quadrupole Moments . . . . .	129
5.4	Applications: Super-Heavy Elements . . . . .	131
5.4.1	Ground States of Rutherfordium and Roentgenium . . . . .	131
5.4.2	Electronic Spectrum of Nobelium ( $Z = 102$ ) and Lawrencium ( $Z = 103$ ) . . . . .	132
5.4.3	Can a Rare Gas Atom Bind an Electron? . . . . .	132
5.4.4	Adsorption of Super-Heavy Atoms on Surfaces – Identifying and Characterizing New Elements . . . . .	133
5.5	Directions for Future Development . . . . .	134
5.5.1	Beyond NVPA: QED Many-Body Description and the Covariant Evolution Operator Approach . . . . .	134
5.5.2	Generalized Fock Space: Double Fock-Space CC . . . . .	138
5.6	Summary and Conclusion . . . . .	140
	References . . . . .	141
6	Block Correlated Coupled Cluster Theory with a Complete Active-Space Self-Consistent-Field Reference Function: The General Formalism and Applications . . . . .	145
	<i>Tao Fang, Jun Shen, and Shuhua Li</i>	
6.1	Introduction . . . . .	145
6.2	CAS-BCCC Method . . . . .	149
6.2.1	The CAS-BCCC Wave Function . . . . .	149
6.2.2	CAS-BCCC4 Equations . . . . .	152
6.2.3	Implementation Details . . . . .	153
6.2.4	Excited States . . . . .	154
6.2.5	Comparison with Related MRCC Methods . . . . .	154
6.3	Some Application Examples . . . . .	156
6.3.1	Ground-State Bond Breaking Potential Energy Surfaces . . . . .	156
6.3.2	Spectroscopic Constants of Diatomic Molecules . . . . .	157
6.3.3	Reaction Barriers . . . . .	158
6.3.4	Singlet-Triplet Gaps of Diradicals . . . . .	160
6.3.5	Low-Lying Excited States . . . . .	163
6.3.6	Size-Extensivity Errors . . . . .	166
6.4	Concluding Remarks . . . . .	168
	References . . . . .	169

7	A Possibility for a Multi-Reference Coupled-Cluster: The MRexpT Ansatz .....	175
	<i>Michael Hanrath</i>	
7.1	Introduction .....	175
	7.1.1 The Single-Reference Case .....	175
	7.1.2 The Multi-Reference Case .....	177
7.2	The MRexpT Approach .....	180
	7.2.1 Ansatz .....	180
	7.2.2 Theoretical and Technical Properties .....	182
7.3	Selected Recent Applications .....	184
	7.3.1 N <sub>2</sub> .....	184
	7.3.2 Wave Function Quality and Variance .....	187
7.4	Conclusions .....	188
	References .....	188
8	Eclectic Electron-Correlation Methods .....	191
	<i>So Hirata, Toru Shiozaki, Edward F. Valeev, and Marcel Nooijen</i>	
8.1	Introduction .....	191
8.2	Theory .....	194
	8.2.1 Coupled-Cluster Theory .....	195
	8.2.2 Equation-of-Motion Coupled-Cluster Theory .....	196
	8.2.3 General Perturbation Theory .....	197
	8.2.4 Low-Order Energy Corrections .....	199
	8.2.5 MBPT .....	200
	8.2.6 Properties of Perturbation Series .....	200
	8.2.7 Second-Order Corrections to CCSD .....	201
	8.2.8 Second-Order Correction to CCSDT .....	202
	8.2.9 Third-Order Corrections to CCSD .....	202
	8.2.10 Second-, Third-, and Fourth-Order Corrections to CIS .....	202
	8.2.11 Second- and Third-Order Corrections to EOM-CCSD .....	204
8.3	Explicitly Correlated Extensions .....	205
	8.3.1 Explicitly Correlated CC and EOM-CC .....	205
	8.3.2 Explicitly Correlated MBPT .....	207
	8.3.3 Perturbation Corrections to Explicitly Correlated CC .....	207
8.4	Computer Algebra .....	208
	8.4.1 Determinant-Based Algorithms .....	208
	8.4.2 Automated Formula Derivation and Implementation .....	209
8.5	Comparative Calculations .....	209
	References .....	214

9	Electronic Excited States in the State – Specific Multireference Coupled Cluster Theory with a Complete-Active-Space Reference. 219	
	<i>Vladimir V. Ivanov, Dmitry I. Lyakh, and Ludwik Adamowicz</i>	
9.1	Introduction . . . . .	219
9.2	State Specific Multireference Coupled Cluster Approach with the CAS Reference . . . . .	220
9.3	Electronically Excited States in the Coupled Cluster Theory . . . . .	224
9.4	State Specific Coupled Cluster Approach for Excited States . . . . .	229
9.5	Numerical Examples . . . . .	238
9.5.1	Excited States of the Water Molecule . . . . .	238
9.5.2	Excited States in Hydrogen Fluoride Molecule . . . . .	242
9.5.3	Excited States in C <sub>2</sub> Molecule . . . . .	243
