Introduction to Volume Three

xiii

BOOK THREE: THEORY OF KNOWLEDGE 1

§. 269.* Purpose, contents, and divisions of this book 1

Part I: Of Ideas 2

§. 270.* The concept of an idea in the subjective sense 2

§. 271.* For every subjective idea there is a corresponding idea in itself 4

§. 272.* Every subjective idea is something actual, but only in that it is a kind of property of a being 5

§. 273. What the author means by a single subjective idea, and by saying that several subjective ideas are equal or unequal 6

§. 274. Can several equal ideas exist in a being at the same time? 8

§. 275.* Strength or vividness of subjective ideas 9

§. 276.* Classification of subjective ideas based upon the corresponding classification of objective ideas 11

§. 277.* We have simple as well as complex ideas 11

§. 278.* We have intuitions as well as concepts 13

§. 279. Sensible and supersensible ideas 14

§. 280.* Clear and obscure ideas 15

§. 281.* Distinct and confused ideas 25

§. 282. Whether each of our ideas has a beginning and an end 29

§. 283.* Whether every idea leaves a certain trace after it has disappeared 31

§. 284. Effects which result from the traces of our ideas 35

§. 285.* Signs for our ideas 44

§. 286.*	Description of the most important ways in which ideas originate	56
§. 287.	Other views on the subject	61
§. 288.	How the lack or cessation of an idea is to be understood . .	69
§. 289.*	Survey of the most important activities and states of our mind connected with ideas	69
Part II: Of Judgements		72
§. 290.*	The concept of a judgement	72
§. 291.*	Some attributes common to all judgements	72
§. 292.	What we call a single judgement, and when we say of two or more judgements that they are equal or unequal	74
§. 293.*	Strength or vividness of judgements, and confidence in a judgement	75
§. 294.*	Distinctions between judgements based upon parallel distinctions between propositions	77
§. 295.	Clear and obscure judgements	77
§. 296.	Distinct and confused judgements	78
§. 297.	Whether every judgement has a beginning and an end . . .	79
§. 298.	Whether every judgement leaves a trace after it disappears	80
§. 299.	Effects of these traces of our judgements	81
§. 300.*	Mediation of a judgement by other judgements	82
§. 301.*	The generation of judgements by the relation of probability	91
§. 302.	How we come by our immediate judgements	92
§. 303.*	How we arrive at, or could arrive at, our most general judgements of experience	94
§. 304.	Other opinions on this subject	111
§. 305.	The doctrine of the Critical Philosophy concerning this point	120
§. 306.*	Survey of the most important activities and states of mind which concern the business of judging	134
Part III: Of the Relation between our Judgements and Truth		139
§. 307.*	More precise determination of the concepts: knowledge, ignorance, and error	139
§. 308.	Grounds for the possibility of ignorance in man	141
§. 309.*	Grounds for the possibility of error, and circumstances promoting error	143
§. 310.	Other treatments of the same subject	147

§. 311.* Origin of true judgements. Understanding and reason . . . 151
§. 312. Whether we can recognise a truth without recognising its grounds 154
§. 313. Grounds for the recognition of truth 156
§. 314. Whether there are definite limits to our cognitive faculty . 156
§. 315. The doctrine of Critical Philosophy on this subject 161
§. 316.* Survey of the most important distinctions between judgements, based on their relation to truth 174

Part IV: Of Certainty, Probability, and Confidence in Judgements 177

§. 317. Definition of the concepts of certainty and probability with respect to thinking beings 177
§. 318. Factors which determine the confidence of our judgements 184
§. 319. The most noteworthy levels of our confidence 187
§. 320. How the various degrees of confidence can be represented numerically 190
§. 321.* Knowledge and belief 193

BOOK FOUR: THE ART OF DISCOVERY 197

§. 322.* Purpose, contents, and divisions of this book 197
§. 323. The concept of reflection, in particular of reflection aimed at the discovery of new truths 198
§. 324. The concept of instructions for thinking 202

Part I: General Rules 204

§. 325.* I. Exact determination of the truth we actually seek, without rejecting truths which present themselves unbidden 204
§. 326.* II. Preliminary consideration of whether answering the question before us is impossible either as such or for us . . 206
§. 327.* III. Taking up suitable preliminary questions 208
§. 328.* IV. Deductions from already known truths or direct method 211
§. 329.* V. Tentative acceptance or indirect method 213
§. 330. VI. Combination of several methods 220
§. 331.* VII. Consultation of others' judgements and of experience 223

§. 332.*	VIII. Examination of one's own previously formed judgements	227
§. 333.	IX. Directing one's attention preferentially towards individual judgements and ideas	236
§. 334.	X. Associating our ideas with suitable signs. Advantages of this association.	237
§. 335.	The nature of signs which are supposed to aid us in our own reflection: 1) They must be sensible objects	239
§. 336.	2) Which can be easily displayed anywhere	239
§. 337.	3) An inner connection between the idea of the sign and the designated idea must either exist or else be easily produced	240
§. 338.	4) A suitable sign should not call forth any detrimental secondary ideas	240
§. 339.	Special attributes of signs that are supposed to preserve our thoughts: 1) They must be sufficiently long-lasting	241
§. 340.	2) They should be easily recognised everywhere	242
§. 341.	3) Identical signs should never have several easily confused meanings	242
§. 342.	4) Different ideas should never be expressed by means of signs which are too similar	242
§. 343.	Some other recommended attributes of signs	243
§. 344.	Rules for the invention and use of signs for the purposes of one's own reflection	245
§. 345.	XI. The use of images connected with our ideas	252
§. 346.*	XII. Consideration of the logical attributes and relations of our judgements and ideas	252
§. 347.	XIII. Estimating the reliability of the answer we have discovered	253
§. 348.*	XIV. Additional rules concerning the conditions of thought	255

Part II: Particular Rules 260

§. 349.*	I. Discovering suitable problems	260
§. 350.*	II. Analysing an idea given to our consciousness	264
§. 351.	Mistakes in carrying out this task	268
§. 352.	III. Whether a given idea is real or imaginary, and whether it has an object	269
§. 353.	IV. Whether a given object-idea has only one or several objects	270

Contents

§. 354.	V. Whether an idea is redundant; purification of redundant ideas	271
§. 355	VI. Investigating the relation between the extensions of given ideas	272
§. 356.	VII. Discovering an idea that contains a similarity between given objects	275
§. 357.	VIII. Discovering an idea that furnishes a difference between given objects	277
§. 358.	IX. Discovering an attribute that belongs exclusively to given objects either with respect to a given multitude of objects or in general	280
§. 359.	X. Discovering an idea that subsumes a given multitude of objects	282
§. 360.	XI. Discovering an idea that subsumes more than a given multitude of objects	284
§. 361.	XII. Discovering an idea that subsumes fewer than a given multitude of objects	285
§. 362	XIII. Discovering an idea that exactly subsumes a given multitude of objects	289
§. 363.	XIV. Discovering an idea that represents less than a given multitude of objects but more than a given part of this multitude	290
§. 364.	XV. Discovering an idea which subsumes both more and less than a given multitude	292
§. 365.	XVI. Discovering several ideas which only collectively subsume a given multitude of objects	294
§. 366.	XVII. Defining a proposition that is given to our consciousness	297
§. 367.	XVIII. Investigating whether a given proposition is analytic or synthetic	298
§. 368.	XIX. Investigating the relations between given propositions	298
§. 369.*	XX. Testing the truth of a given proposition	299
§. 370.*	XXI. Testing the force of conviction of a given proof . . .	302
§. 371.*	The most common flaws of proofs; a) with respect to matter	306
§. 372.*	b) With respect to form	311
§. 373.*	Various indicators of the incorrectness of a proof: a) if the conclusion is false	312
§. 374.*	b) If the proof proves too much	312
§. 375.*	c) If it doesn't use all the conditions	314

Contents

§. 376.*	d) If it calls upon the experience at the wrong place, or scorns it	316
§. 377.	Examination of some famous sophisms from the writings of logicians	316
§. 378.	XXII. Discovering the ground of a given truth	328
§. 379.	XXIII. The discovery of causes for given effects	329
§. 380.	The most common mistakes in performing this task	343
§. 381.	XXIV. Examination of purported causes	344
§. 382.	Further rules to be observed when seeking causes	346
§. 383.	XXV. Discovering suitable means for given ends	347
§. 384.	XXVI. Discovering the effects of given causes	349
§. 385.	XXVII. Investigation of the judgements of other beings	352
§. 386.	XXVIII. Investigation of the intentions behind given actions	354
§. 387.	XXIX. The interpretation of given signs	359
§. 388.	XXX. Discovery of available testimony	367
§. 389.	XXXI. Investigating the credibility of given witnesses	369
§. 390.	XXXII. Determining the credibility of a proposition based on the opinions of all those who either accept or reject it	374
§. 391.	XXXIII. Discovering new truths about a given object	376
