Yu. I. Dimitrienko

Thermomechanics of Composite Structures under High Temperatures

Springer

Contents

1 High-Temperature Environment and Composite Materials 1

1.1 Main Types of High-Temperature Effects on Composite Materials 1

1.1.1 Aerodynamical Heating 2

1.1.2 Gas-Dynamical Heating 10

1.1.3 Heating in Energetic Systems 12

1.1.4 Technological Heating 14

1.1.5 Action of Fire 15

1.2 Ablation Processes in Composites 17

1.2.1 Classification of Ablation Processes 18

1.2.2 Volumetric Ablation 19

1.2.3 Surface Ablation 20

1.3 Phenomena in Composite Materials Under High Temperatures 21

1.4 A Physical Model of Ablative Composite 24

References 25

2 General Equations of Multiphase Continuum Mechanics for Ablative Composites 31

2.1 Conservation Laws 31

2.1.1 Main Concepts of Tensor Analysis 31

2.1.2 System of Conservation Laws for Phases 34

2.1.3 Relationships on a Surface of a Strong Discontinuity 35

2.2 Constitutive Relations for Phases of Ablative Composites 36

2.2.1 The Fourier Law 36

2.2.2 General Thermodynamical Identity 37

2.2.3 Natural Configurations of Phases 38

2.2.4 General Form of Constitutive Relations 40

2.3 Relations at the Phase Interface 43
2.3.1 Main Equations 43
2.3.2 Classification of Phase Interfaces 44
2.3.3 Consequences of General Equations 45
2.3.4 Tensor of Chemical Potential 46
2.4 Equation of Phase Transformation Rate 47
2.5 Infinitesimal Strains of Solid Phases 49
2.5.1 Main Assumptions 49
2.5.2 Constitutive Relations 50
2.5.3 Quasistatic Processes 53
2.5.4 Conservation Equations 53
2.5.5 Conditions on the Phase Interface 54
2.5.6 Rate of the Phase Transformation 56
References 58

3 Mathematical Model of Ablative Composites 61
3.1 Main Assumptions 61
3.2 Method of Asymptotic Averaging 64
3.2.1 Boundary Conditions 64
3.2.2 Initial Conditions 66
3.2.3 Statement of Thermomechanics Problem for Ablative Composites 66
3.2.4 Asymptotic Expansions 67
3.2.5 Zero-Level Local Problem over the Periodicity Cell 67
3.2.6 First-Level Local Problems Over the Periodicity Cell 70
3.3 Averaging of Processes in Ablative Composites 71
3.3.1 Averaged Equations 71
3.3.2 Averaged Constitutive Relations 72
3.3.3 Statement of the Averaged Problem 73
3.4 Analysis of Asymptotic Averaging Method 74
3.5 Statement of Problems for Composites with Ablative Matrix and Fibres 75
3.5.1 Main Equations 75
3.5.2 Motion Equation for the Ablation Surface Σ 77
3.5.3 Constitutive Relations 77
3.5.4 Boundary and Initial Conditions 78
3.5.5 Statement of the Problem in Terms of Stresses 80
References 81

4 Behavior of Matrices at High Temperatures 83
4.1 Varying Density of Matrices at High Temperatures 83
4.1.1 Determination of a Volumetric Ablation Rate of Matrices 83
4.1.2 Experimental Data 85
4.1.3 Pore Pressure 88
4.2 Effective Elastic Properties of Ablative Matrices at High Temperatures 89
4.2.1 Solving the Mechanical Local Problem Over a Periodicity Cell 89
4.2.2 Effective Constitutive Relations 93
4.2.3 Experimental Investigation of Changing Elastic Properties of Matrices Under Heating 94
4.3 Heat Expansion/Shrinkage of Matrices at High Temperatures 98
4.4 Strength Properties of Matrices at High Temperatures 100
4.4.1 Microstresses in Phases 100
4.4.2 Failure Criterion for Matrices at High Temperatures 101
4.4.3 Experimental Investigation of Strength Properties of Matrices Under High Temperatures 103
4.5 Heat Conductivity and Heat Capacity of Matrices at High Temperatures 109
4.5.1 Solving the Local Problem of Heat Conduction 109
4.5.2 Experimental Data 110
4.5.3 Heat Capacity 111
4.6 Gas Permeability of Matrices at High Temperatures 111
4.6.1 Solving the Local Problem of Gas Dynamics 111
References 115

5 Reinforcing Fibres Under High Temperatures 117
5.1 Changing Phase Composition of Fibres Under Heating 117
5.2 Heat Conductivity and Heat Capacity of Ablative Fibres 120
5.3 Varying Elastic Properties of Fibres Under Heating 122
5.4 Heat Deformation of Fibres 124
5.5 Strength Properties of Fibres Under High Temperatures 125
5.5.1 Strength of Idealized Fibre 125
5.5.2 Model of a Thread of Fibres with Defects 125
5.6 Short Fibres and Dispersed Particles 132
References 132

6 Unidirectional Composites Under High Temperatures 135
6.1 Structural Model of Unidirectional Composites 135
6.1.1 Peculiarities of Unidirectional Composites Under High Temperatures 135
6.1.2 Multilevel Internal Structure of Unidirectional Composite 136
6.2 Model of Microcomposite 138
6.2.1 Elastic Properties 138
6.2.2 Heat Deformations and Phase Interactions 141
6.2.3 Microstresses 142
6.2.4 Heat Conductivity 143
6.3 Thermo-Elastic Characteristics and Heat Conductivity of Unidirectional Composites 144
6.3.1 Theoretical Relations 144
6.3.2 Experimental Data 144
6.4 Strength Properties of Unidirectional Composite Under High Temperatures 147
6.4.1 Thermal Strength of Unidirectional Composite in Ension Along Reinforcing Direction 148
6.4.2 Experimental Data 153
6.4.3 Thermal Strength of Unidirectional Composite in Compression Along Reinforcing Direction 156
6.4.4 Thermal Strength of Unidirectional Composite in Transverse Tension/Compression and Shear 158
6.4.5 Thermal Microstresses and Microcracking 159
6.4.6 Thermal Strength of Unidirectional Composite in Longitudinal Shear 161
6.4.7 Multiaxial Loading of Unidirectional Composite 163
6.5 Heat Expansion/Shrinkage 164
References 165

7 Textile Ablative Composite Materials 167
7.1 Model of a Structure of Ablative Textile Composite Material 167
7.2 Model of a Layer with Curved Threads 169
7.2.1 Elastic Properties 169
7.2.2 Heat Deformations and Coefficients of Phase Interaction 172
7.2.3 Microstresses 172
7.2.4 Heat Conductivity of Layers with Curved Threads . . 174
7.3 Constitutive Relations for Ablative Textile Composites 175
7.4 Thermo-Elastic Moduli and Heat Conductivity Coefficients of Textile Composites 176
7.4.1 Theoretical Results 176
7.4.2 Experimental Data 178

7.5 Heat Deformations 181
7.5.1 Theoretical Relations. 181
7.5.2 Experimental Data 182
7.6 Coefficients of Phase Interaction. 184
7.7 Thermal Strength 185
7.7.1 Destruction by Types (A_α) and (B_α) 187
7.7.2 Destruction by the Types (C) and (D) 192
7.7.3 Experimental Data 193
7.8 Thermal Properties of Textile Composites 194
7.8.1 Heat Conductivity. 194
7.8.2 Density 196
7.9 Gas Permeability 199
References 200

8 Composites Reinforced by Dispersed Particles 201
8.1 Model of the Composite 201
8.2 Thermo-Elastic Characteristics 202
8.2.1 One-Dimensional Model 202
8.2.2 Three-Dimensional Relations 205
8.3 Strength 206
8.3.1 Strength in Tension. 206
8.3.2 Strength in Compression 207
8.4 Thermal Properties 208
8.4.1 Heat Conductivity. 208
8.4.2 Density and Heat Capacity. 209
8.4.3 Gas Permeability 209
References 211

9 Phenomena in Composite Materials Caused by Gradient Heating 213
9.1 Internal Heat-Mass-Transfer and Stresses in Ablative Composites Under Gradient Heating. 214
9.1.1 Problem Statement and Solution. 214
9.1.2 Computed Results. 215
9.2 Plane Problems of Thermomechanics for Composites Under High Temperatures 219
9.3 Heat Deformations, Stresses and Load-Bearing Capacity of a Composite Plate Under Gradient Heating 223
9.3.1 Problem Statement 223
9.3.2 Other Cases of Loading a Plate 227
9.3.3 Computed Results. 228
References 233

10 Linear Ablation of Composites 235
10.1 Main Types of Linear Ablation of Composites 236
10.2 Combustion Rate 236
10.2.1 General Equations 236
10.2.2 Combustion Rate of a Composite in Air Flow 239
10.2.3 Computed Results 240
10.3 Sublimation Rate 241
10.4 Thermomechanical Erosion Rate 243
10.4.1 General Relationships 243
10.4.2 Isotropic Composites 245
10.4.3 Transversally Isotropic Composites 250
10.4.4 Textile Composites 253
10.4.5 Computed Results 254
10.5 Melting Rate 255
10.6 Comparison of Theoretical and Experimental Results 256
10.6.1 Effect of a Matrix Type on the Rate of Linear Ablation of Composites 257
10.6.2 Effect of a Fibre Type on the Rate of Linear Ablation of Composites 258
10.6.3 Effect of a Pressure Head on the Rate of Linear Ablation of Composites 259
10.6.4 Particle-Reinforced Composites 261
10.7 Heat Balance on Ablative Surface 262
10.8 Criteria of Efficiency of Composites 263
References 266

11 Thermal Stresses in Composite Structures Under High Temperatures 269
11.1 Axisymmetric Problems of Thermomechanics for Composites Under High Temperatures 269
11.1.1 Basic Equations 269
11.1.2 Constitutive Relations 270
11.1.3 Functions of Stresses 272
11.1.4 Boundary Conditions 272
11.1.5 Statement of the Axisymmetric Problem in Terms of Stresses 273
11.1.6 The Problem Statement in Terms of Displacements 273
11.2 Thermal Stresses in Composite Structures of Heat-Energetic Systems 275
11.2.1 External Shell of the Inlet of STJE 275
11.2.2 A Shell of a Central Body of STJE Inlet 283

11.3 Thermal Stresses in Thermoprotective Structures Under Gas-Dynamical Heating 287
11.3.1 The Problem Statement 287
11.3.2 Numerical Analysis of the Problem 290
11.4 Thermal Stresses in Thermoprotective Structures Under Aerodynamical Heating 294
11.4.1 The Problem Statement 294
11.4.2 Computed Results 296
11.5 Thermal Stresses in Composites Under Local Technological Heating 301
11.5.1 Statement of the Problem 302
11.5.2 Computed Results 302
References 306

12 Mechanics of Composite Thin-Walled Shells Under High Temperatures 309
12.1 General Equations for Thin-Walled Ablative Shells Under High Temperatures 310
12.1.1 Model of a Multilayer Composite Shell 310
12.1.2 Constitutive Relations of Ablative Composites 312
12.1.3 Boundary and Initial Conditions 315
12.2 Main Assumptions for Thin-Walled Ablative Shells 317
12.3 Peculiarities of the Theory of Composite Shells Under High Temperatures 318
12.3.1 Mechanical Equations for Thin-Walled Ablative Shells 318
12.3.2 Strains and Stresses in a Multilayer Ablative Shell 319
12.3.3 Constitutive Relations for a Multilayer Ablative Shell 321
12.3.4 The Problem Statement on Heat-Mass-Transfer and Deforming for a Multilayer Ablative Shell 322
12.4 Cylindrical Composite Shells Under High Temperatures 324
12.4.1 Basic Equations 324
12.4.2 Computed Results 325
12.5 Failure of Composite Structures Under High Temperatures . . . 330
12.5.1 Conditions of the Appearance of Failure 330
12.5.2 Behavior of a Composite Shell After the Appearance of Failure 332
12.5.3 Computed Results 334
12.5.4 Experimental Results 336
References 336

13 Finite-Element Method for Modeling of Thermomechanical Phenomena in Composite Shells Under High Temperatures 339
13.1 Variational Statements of Problems for Composite Shells Under High Temperatures 339
13.1.1 A Variational Statement of a Space Problem for Ablative Shell Mechanics 339
13.1.2 The Hellinger–Reissner Variational Principle for a Space Problem 344
13.1.3 The Hellinger–Reissner Variational Principle for Ablative Shells 346
13.2 Finite-Element Method for Ablative Composite Shells 350
13.3 Computational Methods for Modeling of Internal Heat-Mass-Transfer in Ablative Composite Thin-Walled Shells 354
13.3.1 The General Method Algorithm 354
13.3.2 The Dimensionless Form of Heat-Mass-Transfer Equation System. 355
13.3.3 The Numerical Solving Algorithm for the Local Problem 357
13.3.4 The Asymptotic Method of Solving the Heat-Mass-Transfer Problem in Domain V_2 360
13.3.5 The Numerical Method for Solving the Heat-Mass-Transfer Equations in Domain V_2 ... 362
13.4 Modeling of Cylindrical Composite Shells Under Local High-Temperature Heating 364
13.4.1 Initial Data and Loading Parameters 364
13.4.2 Analysis of Modeling Results of Internal Heat-Mass-Transfer in a Shell 365
13.4.3 Analysis of Temperature Deformations 368
13.4.4 Analysis of Results for Displacement U_1 371
13.4.5 Analysis of Results for Displacement U_2 372
13.4.6 Analysis of Results for Flexure W of the Shell. 376
13.4.7 Analysis of Results for Rotation Angle γ_1 of the Normal 381
13.4.8 Analysis of Results for Rotation Angle γ_2 of the Normal 383
13.4.9 Analysis of Results for Stress σ_1 386
13.4.10 Analysis of Results for Stress σ_2 386
13.4.11 Analysis of Results for Stress σ_{12} 390
13.4.12 Analysis of Results for Stress σ_{13} 390
13.5 Modeling of Axisymmetric Composite Shells Under Local High-Temperature Heating 390
13.5.1 Initial Data and Loading Parameters 390
13.5.2 Analysis of Results for Displacements U_1 and U_2 ... 392
13.5.3 Analysis of Results for Flexure W 393

13.6 Modeling of Composite Plates Under Local High-Temperature Heating 403
13.6.1 Initial Data and Loading Parameters 403
13.6.2 Analysis of Results for Displacement U_1 403
13.6.3 Analysis of Results for Flexure W 407
13.6.4 Analysis of Results for Rotation Angle γ_2 of the Normal 407
References 414

14 Methods of Experimental Investigation of High-Temperature Properties of Composite Materials 417
14.1 Determination of Density Under Heating 417
14.2 Determination of Thermal Characteristics Under Heating 418
14.2.1 Experimental Device 418
14.2.2 Determination of Thermoconductivity 419
14.2.3 Determination of Heat Conductivity 421
14.3 Determination of Gas Permeability 422
14.4 Determination of Heat Deformations Under Heating 423
14.5 Determination of Strength and Elastic Modulus of Composites Under High Temperatures 424
14.6 Gas-Dynamical Testing of Composites 427
