Alina Bărbulescu

Studies on Time Series Applications in Environmental Sciences

Springer

Contents

1 Hypotheses Testing on Meteorological Time Series 1
1 Normality Tests 1
2 Homoskedasticity Tests 7
3 Autocorrelation Tests 9
4 Outliers' Detection 15
5 Change Points' Detection 19
6 Testing for Long Range Dependence Property 31
7 Goodness of Fit Tests 42
References 45

2 Mathematical Methods Applied for Hydro-meteorological Time Series Modeling 51
1 Types of Models. Classical Decomposition Method 52
2 Box–Jenkins Approach and Stationarity Tests 55
2.1 Box–Jenkins Approach 55
2.2 Stationarity Tests 61
3 Genetic Algorithms 66
3.1 Gene Expression Programming 67
3.2 Adaptive Gene Expression Programming 69
4 Support Vector Regression (SVR) 70
5 General Regression Neural Network (GRNN) 71
6 Wavelets 72
References 74

3 Models for Precipitation Series 79
1 ARMA Models for Precipitation Series and Generation of Precipitation Fields 79
1.1 ARMA Models for Precipitation Series and Generation of Annual Precipitation Fields 79
1.2 Generation of Monthly Precipitation Series 91

2 Modeling and Forecast Using GEP, AdaGEP, SVR, GRNN and Hybrid Models 105
3 Decomposition and Wavelets Models 111
References 118

4 Modeling the Precipitation Evolution at Regional Scale 121
1 On the Correlation and Predictability of Precipitation at Regional Scale 121
2 Modeling the Regional Precipitation 126
2.1 Models for the Regional Annual and Monthly Precipitation Series 128
2.2 Models for the Regional Monthly Maximum Annual Precipitation 131
3 Generation of Annual Precipitation Field at Regional Scale 138
3.1 Overview of Some Theoretical Approaches 138
3.2 Application to Annual Precipitation in Dobrogea Region 140
References 142

5 Analysis and Models for Surface Water Quality 145
1 On the Hydrochemical Properties of the Water of Techirghiol Lake 146
2 On the Temperature of the Water of Techirghiol Lake 149
References 150

6 Models for Pollutants Dissipation 153
1 GRNN Models 154
2 Linear Models 156
References 157

7 Spatial Interpolation with Applications 159
1 Theoretical Considerations on the Spatial Interpolation Methods 159
1.1 Mechanical Methods 160
1.2 Statistical Methods 163
2 Applications of the Spatial Interpolation Methods 167
2.1 The Most Probable Precipitation Method 167
2.2 Spatial Interpolation of Maximum Annual Precipitation 173
2.3 Spatial Interpolation of the Parameters in the AR Models for the Annual Precipitation Series 176
References 186
