

Takehiko Mori

Electronic Properties of Organic Conductors

Contents

1	Quantum Chemistry of Molecules	1
1.1	Principles of Quantum Mechanics	1
1.2	Conversion of Energy Units	4
1.3	Wave Equations	5
1.4	Atomic Orbitals	8
1.5	Molecular Orbitals	14
1.5.1	Polar Bonds	17
1.5.2	Diatomic Molecules	19
1.5.3	Hückel Approximation	22
1.6	Symmetry Orbital	32
1.7	Properties of Eigenvalues and Eigenfunctions	48
1.8	Uncertainty Principle	56
1.9	Analytical Mechanics and Phase	58
	References	60
2	Quantum Chemistry of Solids	61
2.1	Tight-Binding Approximation	61
2.2	Free-Electron Model	69
2.3	Fermi Distribution	76
2.4	Relation Between the Tight-Binding Approximation and the Free-Electron Model	84
2.5	Two-Dimensional Energy Band	86
2.6	Tight-Binding Approximation for General Crystals	89
2.7	Brillouin Zone	93
2.8	Fermi Surface of Metals	96
2.9	Fermi Surface of Low-Dimensional Metals	98
	References	108
3	Transport Properties	109
3.1	Energy Band and Transport Properties	109
3.1.1	Group Velocity	109

3.1.2	Effective Mass	111
3.1.3	Relaxation Time	114
3.1.4	Hall Effect	115
3.1.5	Thermal Conductivity	117
3.2	Optical Response of Metals	119
3.3	Semiconductor	121
3.4	Quantum Oscillation and Observation of the Fermi Surface	124
3.5	Magnetoresistance	133
3.6	Transport Equation and Thermoelectric Power	139
3.7	Quantum Hall Effect	149
	References	150
4	Magnetism	153
4.1	Molecular Orbitals of Transition-Metal Compounds	153
4.2	Diamagnetism	158
4.3	Paramagnetism	161
4.4	Pauli Paramagnetism	163
4.5	Ferromagnetism	165
4.6	Antiferromagnetism	169
4.7	Low-Dimensional Magnetism	172
4.8	Magnetic Frustration	174
4.9	πd System	175
4.10	Molecular Magnetism	179
	References	182
5	Electron Correlation	183
5.1	Molecular Orbital Theory Considering the Coulomb Interaction	183
5.2	Electron Correlation in the Molecular Orbital Theory	190
5.3	Creation Annihilation Operators	192
5.4	Electron Correlation in Solids	194
5.5	Origin of Magnetic Interaction	198
5.6	Conducting Metal Oxides	204
5.7	Hubbard Model	206
5.7.1	Stoner Model	206
5.7.2	Hartree–Fock Approximation of the Hubbard Model	208
5.7.3	Exact and Approximate Solutions of the Hubbard Model	210
5.8	Charge Order	212
5.9	Kondo Effect	217
5.10	Anderson Localization in a Disordered System	221
	References	225
6	Superconductivity	227
6.1	Perfect Diamagnetism	227
6.2	Energy Gap	232

6.3	Ginzburg-Landau Expansion	235
6.4	Type-II Superconductor	239
6.5	Coulomb Repulsion in a Metal	243
6.6	Microscopic Theory of Superconductivity	244
6.7	Anisotropic Superconductivity	249
6.8	Phase Diagram in a One-Dimensional System	251
	References	252
7	Charge-Transfer Complexes	253
7.1	Requirements for Organic Conductors	253
7.2	Charge-Transfer Complex	256
7.3	Basic Charge-Transfer Complexes	262
7.4	(TTF)(TCNQ)	265
7.5	TMTSF	270
7.6	Metal-Insulator Transitions in Organic Conductors	272
7.7	BEDT-TTF	276
7.7.1	β -Structure	278
7.7.2	β' -Structure	279
7.7.3	β'' -Structure	280
7.7.4	θ -Structure	282
7.7.5	α -Structure	285
7.7.6	κ -Structure	288
7.7.7	δ -Structure	290
7.8	Organic Superconductivity	291
7.8.1	π d-Superconductors	292
7.8.2	Superconductors of Other Donors	295
7.8.3	τ -Structure	297
7.9	Conducting Metal Complexes	298
7.10	Synthesis of Charge-Transfer Complexes	303
	References	305
8	Organic Semiconductors	311
8.1	Photoconductivity: Electrophotography and Time-of-Flight Mobility	311
8.2	Space Charge Limited Current	314
8.3	Relaxation Time of Carriers	316
8.4	Ionization of Traps	317
8.5	Diode	319
8.6	Schottky Junction	322
8.7	Photoelectron Spectroscopy	324
8.8	Organic Light-Emitting Diode	329
8.9	Thin-Film Field-Effect Transistors	333
8.10	Organic Transistors	335

8.11 Organic Solar Cells	344
8.12 Synthesis of Conducting Polymers	347
References	350
Appendix	353
