Contents

<i>Foreword</i>	xiii
<i>Preface</i>	xv
<i>Introduction</i>	xvii
The chemical diversity of wine	xvii
What is wine?	xvii
Chemical reactions in wine	xx
Chemistry as a historical record	xxi
The chemical senses and wine flavor	xxi
References	xxiv
Part A Wine Components and Their Reactions	1
1 Water and Ethanol	3
1.1 Introduction	3
1.2 Chemical and physical properties of water	3
1.3 Properties of ethanol and ethanol–water mixtures	4
1.4 Typical ethanol concentrations in wines	6
1.5 Sensory effects of ethanol	7
References	9
2 Carbohydrates	11
2.1 Introduction	11
2.2 Nomenclature, representation, and occurrence of sugars	11
2.3 Physical, chemical, and sensory properties of sugars	14
2.4 Polysaccharides	17
References	18
3 Acids	19
3.1 Introduction	19
3.2 Organic acids in wine	19
3.3 Organic acids, pH, and wine acidity	21
3.4 Acid adjustments	28
3.5 General roles of organic acids and pH in wine reactions	31
3.6 Sensory effects of acids	31
References	32

4 Minerals	34
4.1 Introduction	34
4.2 Origins of metals in wine	35
4.3 Reactions involving metals	35
4.4 Sensory effects of metals	37
4.5 Metals and wine authenticity	37
References	38
5 Amines, Amino Acids, and Proteins	40
5.1 Introduction	40
5.2 Chemistry of amines	40
5.3 Amino acids and related major nitrogenous compounds in wines	41
5.4 Nitrogenous compounds with health effects	44
5.5 Odor-active amines	45
References	48
6 Higher Alcohols	51
6.1 Introduction	51
6.2 Properties of higher alcohols	51
6.3 Origins and concentrations of higher alcohols	52
6.4 Six-carbon (C ₆) alcohols	53
6.5 Methanol	54
References	55
7 Esters	57
7.1 Introduction	57
7.2 Chemistry of esters	57
7.3 Esters in grapes	60
7.4 Esters formed during winemaking and storage	60
7.5 Sensory effects	65
References	66
8 Isoprenoids	68
8.1 Introduction	68
8.2 General chemical and sensory properties of isoprenoids	68
8.3 Monoterpenoids	69
8.4 Sesquiterpenoids	73
8.5 C ₁₃ -Norisoprenoids	74
References	76
9 Aldehydes, Ketones, and Related Compounds	79
9.1 Introduction	79
9.2 Acetaldehyde	80
9.3 Short and medium chain aldehydes	80
9.4 Complex carbonyls	84
9.5 Carbonyl reactivity	85
References	86

10 Thiols and Related Sulfur Compounds	88
10.1 Introduction	88
10.2 Varietal sulfur aroma compounds – polyfunctional thiols	91
10.3 Fermentative sulfur aroma compounds	93
10.4 Other sulfur-containing aroma compounds	94
Chemical principles: nucleophiles and electrophiles	95
References	97
11 Introduction to Phenolics	99
11.1 Introduction	99
11.2 Non-flavonoids	102
11.3 Flavonoids	103
References	104
12 Volatile Phenols	105
12.1 Introduction	105
12.2 Structure and chemical properties	105
12.3 Concentrations in wine and sensory effects	107
12.4 Origins in wine and effects on volatile phenol profile	107
References	110
13 Non-flavonoid Phenolics	112
13.1 Introduction	112
13.2 Hydroxycinnamates	112
13.3 Hydroxybenzoic acids	113
13.4 Stilbenes	114
References	115
14 Flavan-3-ols and Condensed Tannin	117
14.1 Introduction	117
14.2 Monomeric catechins	117
14.3 Oligomeric proanthocyanidins and polymeric condensed tannins	119
14.4 Sensory effects	122
Chemical principles: electrophilic aromatic substitution	123
References	125
15 Flavonols	127
15.1 Introduction	127
15.2 Concentrations of flavonols	127
15.3 Effects of growing conditions and winemaking	129
References	129
16 Anthocyanins	131
16.1 Introduction	131
16.2 Structures and forms	131
16.3 Non-covalent interactions: co-pigmentation	133
16.4 Bisulfite bleaching	134
16.5 Wine pigments	135
References	138

17 Sulfur Dioxide	140
17.1 Introduction and terminology	140
17.2 Acid–base chemistry of SO ₂	141
17.3 Sulfonate adducts, “bound SO ₂ ,” and antioxidant effects	143
17.4 Typical sources and concentrations of SO ₂ in wine	146
17.5 Measurement of molecular, free, and total SO ₂	146
17.6 Sensory effects	147
References	148
18 Taints, Off-flavors, and Mycotoxins	149
18.1 Introduction	149
18.2 Common wine taints	150
18.3 Off-flavors in wine	155
References	156
Part B Chemistry of Wine Production Processes	159
19 Outline of Wine Production	161
19.1 Introduction	161
19.2 Basic workflow	161
19.3 Processes involved	164
19.4 Tanks and fermenters	166
19.5 Beyond fermentation	169
19.6 Specialty wines	169
References	170
20 Grape Must Composition Overview	172
20.1 Sampling	172
20.2 Sugars	172
20.3 Acids	173
20.4 Phenolics	174
20.5 Nitrogen species	175
20.6 Lipids and waxes	175
20.7 Minerals and vitamins	176
20.8 Isoprenoids	176
20.9 Insoluble materials	176
References	177
21 Maceration and Extraction of Grape Components	179
21.1 Introduction	179
21.2 Pre-fermentative treatments	183
21.3 Maceration treatments during fermentation	186
21.4 Post-fermentation maceration	189
References	190

22 The Biochemistry of Wine Fermentations	194
22.1 Glycolysis	195
22.1.1 Introduction	195
22.1.2 Glycolysis and alcoholic fermentation	196
22.1.3 Glyceropyruvic fermentation	198
22.1.4 Succinic acid and other Krebs cycle intermediates	200
22.1.5 Consequences of glycolysis on wine chemistry	202
References	204
22.2 Fatty Acid Metabolism	205
22.2.1 Introduction	205
22.2.2 Long-chain fatty acid metabolism	205
22.2.3 Mid-chain fatty acids (MCFAs) and ethyl esters	209
22.2.4 Increasing MCFA and their ethyl esters in winemaking	211
References	212
22.3 Amino Acid Metabolism	214
22.3.1 Introduction	214
22.3.2 Nitrogen uptake and catabolite repression	214
22.3.3 Amino acid anabolism, catabolism, and carbon skeletons	216
22.3.4 Higher alcohol formation	216
22.3.5 Acetate ester formation	218
22.3.6 YAN in the winery – requirements, approaches, and consequences	219
References	221
22.4 Sulfur Metabolism	223
22.4.1 Introduction	223
22.4.2 Sulfide production and assimilation	223
22.4.3 Nitrogen sources and H ₂ S formation	226
22.4.4 Timing of formation and residual H ₂ S	227
References	228
22.5 Bacterial Fermentation Products	230
22.5.1 Introduction	230
22.5.2 Lactic acid bacteria	230
22.5.3 Spoilage of wine by bacteria	235
References	237
23 Grape-Derived Aroma Precursors	239
23.1 Glycosidic Precursors to Wine Odorants	240
23.1.1 Introduction	240
23.1.2 Formation of glycosidic aroma precursors in grape berries	242
23.1.3 Glycosidic aroma precursors – extraction	245

23.1.4	Hydrolysis of glycosidic aroma precursors – mechanisms	246
23.1.5	Hydrolysis of glycosides under fermentation and aging conditions	249
	References	252
23.2	S-Conjugates	256
23.2.1	Introduction	256
23.2.2	Formation of S-conjugate precursors in berries and juice	257
23.2.3	Conversion of S-conjugate precursors during fermentation	259
23.2.4	Mass balance and alternative pathways to volatile thiol formation	262
	References	263
23.3	Conversion of Variety Specific Components, Other	265
23.3.1	Introduction	265
23.3.2	Polyunsaturated fatty acid precursors of C ₆ compounds	265
23.3.3	Hydroxycinnamic acids, <i>Brettanomyces</i> , and volatile phenols	269
23.3.4	S-methylmethionine and dimethyl sulfide	273
	References	275
24	Wine Oxidation	278
24.1	Introduction	278
24.2	Redox reactions	278
24.3	The central tenets of wine oxidation	280
24.4	The central tenets of quinone reactions	283
24.5	The central tenets of the Fenton reaction and byproducts	288
	References	291
25	Topics Related to Aging	294
25.1	Introduction	294
25.2	Reactions involving red wine pigments	294
25.3	Hydrolytic and pH-dependent reactions	298
25.4	Activation energy and temperature effects on aging	303
25.5	Effects of oak storage	304
25.6	Sensory effects of different aging conditions	309
	Closure performance	312
	References	313
26	The Chemistry of Post-fermentation Processing	318
26.1	Cold Stabilization	319
26.1.1	Introduction	319
26.1.2	KHT crystal properties and solubility	320
26.1.3	Critical factors for KHT precipitation	322
26.1.4	Testing for KHT stability	325
26.1.5	Treatments for preventing KHT precipitation	327
26.1.6	CaT and related precipitates	330
	References	330

26.2 Fining	332
26.2.1 Introduction	332
26.2.2 Tannin fining with proteins	333
26.2.3 Protein fining with bentonite	338
26.2.4 Miscellaneous fining and related treatments	341
References	343
26.3 Particle Filtration and Reverse Osmosis	346
26.3.1 Introduction	346
26.3.2 Definitions, principles, and characteristics of winery filtration	347
26.3.3 Filtration and fouling	350
26.3.4 Reverse osmosis	354
26.3.5 Sensory effects of filtration	355
References	357
26.4 Distillation	359
26.4.1 Introduction	359
26.4.2 Vapor–liquid equilibria	360
26.4.3 Batch and continuous distillation	365
26.4.4 Spirit composition and cask maturation	373
References	375
27 Additives and Processing Aids	377
27.1 Introduction	377
27.2 Regulations and terminology	377
27.3 Additives and processing aids: functions and comparison across regions	379
References	382
Part C Case Studies: Recent Advances in Wine Chemistry	383
28 Authentication	385
28.1 Introduction	385
28.2 Fraud – categories and detection approaches	385
28.3 Stable isotope ratio analysis to detect glycerol adulteration	387
28.4 Future challenges in wine authentication	389
References	390
29 Optimizing White Wine Aromas	392
29.1 Introduction	392
29.2 Enhancement of varietal thiols	392
29.3 Cofermentation and spontaneous fermentation	394
References	395
30 Appearance of Reduced Aromas during Bottle Storage	397
30.1 Introduction	397
30.2 Potential latent sources of compounds responsible for reduced aromas	397
References	399

31 Grape Genetics, Chemistry, and Breeding	400
31.1 Introduction	400
31.2 Breeding new varieties	400
31.3 Genetics and selection	402
References	403
32 Analytical Innovations and Applications	404
32.1 Introduction	404
32.2 Typical approaches to wine analysis	405
32.3 Multivariate data analysis and chemometrics	408
32.4 Chemometrics in practice – rapid methods for wine analysis	409
32.5 Targeted and untargeted metabolomics of wine	413
References	414
33 New Approaches to Tannin Characterization	417
33.1 Introduction	417
33.2 The challenge of astringency subclasses	418
References	418
