

Luca Fedeli

High Field Plasmonics

Doctoral Thesis accepted by
University of Pisa, Italy

Contents

1 Introduction	1
References.	5
2 Introduction on High Intensity Laser-Plasma Interaction and High Field Plasmonics	7
2.1 Evolution of High Intensity Laser Technology	7
2.1.1 Overview	8
2.1.2 A Typical High Intensity Ti:Sapphire Laser System	10
2.1.3 Towards 10 PW Laser Systems.	11
2.2 Relativistic Laser Plasma Interaction	12
2.2.1 Single Particle Motion.	12
2.2.2 Propagation of EM Waves in a Plasma.	14
2.2.3 Relativistic Kinetic Equations	16
2.2.4 Energy Absorption with Overdense Targets	18
2.2.5 Target Normal Sheath Acceleration (TNSA).	21
2.2.6 Radiation Reaction Force and QED Effects.	22
2.2.7 Applications	23
2.3 High Field Plasmonics	28
2.3.1 Excitation of Surface Plasmons.	29
2.3.2 Overview of Plasmonic Schemes and Applications.	33
2.3.3 Outlook for Relativistic Plasmonics	34
References.	35
3 Numerical Tools	41
3.1 Numerical Simulations of Plasma Physics	41
3.2 Particle-In-Cell Codes.	43
3.3 PICCANTE: An Open-Source PIC Code	45
3.3.1 Optimization of Piccante.	48
3.4 PICcolino: A Spectral PIC Code	52

3.5	Applications	54
3.5.1	Weibel Instability in Pair-Plasmas	54
3.5.2	Intense Laser Interaction with Thin Gold Targets	58
	References	60
4	Electron Acceleration with Grating Targets	63
4.1	Introduction and Previous Results	64
4.1.1	Previous Experimental Investigations	64
4.1.2	Previous Theoretical and Numerical Investigations	67
4.2	Experimental Campaign at CEA-Saclay	67
4.2.1	Experimental Setup	68
4.2.2	Experimental Results	73
4.3	Numerical Simulations	79
4.3.1	2D Simulation Campaign	80
4.3.2	3D Simulation Campaign	82
4.4	Theory of Surface Plasmon Acceleration	87
4.5	Experimental Campaign at GIST	92
4.5.1	Laser System	93
4.5.2	Experimental Set-Up	93
4.5.3	Preliminary Results	94
4.6	Conclusions	95
	References	95
5	Foam Targets for Enhanced Ion Acceleration	99
5.1	Introduction	100
5.1.1	Requirements for a Laser-Based Ion Accelerator	100
5.1.2	Previous Investigations with Foam Targets	102
5.2	Experimental Activity	103
5.2.1	Laser System	103
5.2.2	Experimental Setup	104
5.2.3	Targets	105
5.2.4	Experimental Plan (First Campaign)	107
5.2.5	Experimental Plan (Second Campaign)	107
5.3	Experimental Results	108
5.3.1	First Experimental Campaign: Enhanced Ion Acceleration	108
5.3.2	Second Experimental Campaign: Effect of Pulse Length on Ion Acceleration with Foam Targets	111
5.4	Numerical Simulations	112
5.4.1	2D Simulations	112
5.4.2	3D Simulations	121
5.4.3	Modelling of Foam Target with Diffusion Limited Aggregation	125
5.5	Conclusions	127
	References	128

6 Numerical Exploration of High Field Plasmonics in Different Scenarios	131
6.1 Rayleigh–Taylor Instability in Radiation Pressure Acceleration . . .	132
6.1.1 Radiation Pressure Acceleration	132
6.1.2 Theoretical Model of Laser-Driven Rayleigh–Taylor Instability	136
6.1.3 Numerical Simulations	143
6.1.4 Conclusions.	149
6.2 Plasmonic Effects in High Order Harmonic Generation from Grating Targets.	150
6.2.1 Introduction on HHG with Laser-Based Sources.	150
6.2.2 Grating Targets as a HHG Source.	152
6.2.3 Conclusions.	157
6.3 Energy Concentration Schemes?.	158
6.3.1 Conclusions.	160
References.	160
7 Conclusions and Perspectives	165
Reference	166
Appendix A: Code Normalization	167
Appendix B: Particle-In-Cell algorithm.	169
Curriculum Vitae	177
