Approaches to Heavy Metal Tolerance in Plants

 Springer

Contents

1	Heavy Metal Uptake in Plants	1
1.1	Introduction	1
1.2	Metal Ion Binding to Extracellular Exudates and to the Cell Wall	3
1.3	Metal Ion Transport Through the Plasma Membrane in Roots	4
1.3.1	ZIP Family	4
1.3.2	NRAMP Family	5
1.3.3	Copper Transporter Family	5
1.4	Reduced Metal Uptake and Efflux Pumping at the Plasma Membrane	6
1.5	Root-to-Shoot Metal Translocation	7
1.6	Metal Storage	8
1.6.1	HMA Family of Transporters	8
1.6.2	MATE Family of Efflux Proteins	8
1.6.3	Oligopeptide Transporter Family	9
1.7	Heavy Metal Chelation in the Cytosol	9
1.7.1	Phytochelatins	9
1.7.2	Metallothioneins (MTs)	10
1.7.3	Ferritins	12
1.8	Organic Acids, Amino Acids, and Phosphate Derivatives	12
1.9	Metal Sequestration in the Vacuole by Tonoplast Transporters	13
1.9.1	The ABC Transporters	13
1.9.2	The CDF Transporters	13
1.9.3	The HMA Transporters	14
1.9.4	CaCA Transporters	14
1.9.5	NRAMP Transporters	15
	References	15
2	Metal Tolerance Strategy in Plants	19
2.1	Heavy Metal Interaction with Other Nutrients	20
2.2	Inversion of Metal Toxicity with Nutrient Element Interactions	20
2.3	Role of Phytochelatins in Metal Tolerance	22

2.4	Metal Complex Formation by PCs	23
2.4.1	Metal Chelation with Reference to Cadmium by Phytochelatins (PCs)	24
2.5	Chelation of Heavy Metals by Metallothioneins (MTs)	25
2.6	Metal Detoxification by Organic Acids, Amino Acids, and Other Phosphate Derivatives	25
	References	28
3	Heavy Metal Stress Signalling in Plants	33
3.1	Introduction	34
3.1.1	Direct Action of Heavy Metals	35
3.1.2	Indirect Action of Heavy Metals	35
3.2	Hormone Signalling Pathways	36
3.2.1	Signalling Through Reactive Oxygen Species (ROS)	37
3.3	Review of Abiotic Stress Features Generating MAPK Activity	39
3.4	Plant Hormones Induced MAPK Activity	41
3.5	MAPK Modules Involved Both in Plant Development and in Stress Response	42
3.6	Strategies to Elucidate Stress-Stimulated MAPKs and Allied Plant Stress Tolerance	43
3.7	Stratagem for Genetic Manipulations of Kinases and Their Targets with Biotechnological Prospective	45
3.7.1	Stress Tolerance in Arabidopsis with Genetically Modified MAPKs	45
3.7.2	Tolerance Strategy in Plants Exhibiting Genetically Tailored MAPKs	47
	References	48
4	Use of Mycorrhiza as Metal Tolerance Strategy in Plants	57
4.1	Introduction	58
4.2	Root Cell Wall and Exudates	59
4.3	Plasma Membrane	59
4.4	Expression and Role of Heat Shock Proteins (HSPs)	60
4.5	Mechanism of Arbuscular Mycorrhizal (AM) Fungi for Phytoremediation	61
4.5.1	Phytostabilization	61
4.5.2	Phytoextraction	63
4.6	Developmental Patterns of AMF During Heavy Metal Stress	64
4.7	Ecological Development of the Rhizosphere by AMF	64
	References	65

5	Phytoremediation: A Green Technology	69
5.1	Introduction	70
5.2	Phytoextraction.....	71
5.3	Phytostabilization	71
5.4	Rhizofiltration.....	71
5.5	Phytovolatilization	71
5.6	Fundamental Mechanism of Heavy Metals and Inorganic Contaminant Uptake and Transport.....	72
	5.6.1 Accumulation and Sequestration.....	72
	5.6.2 Hereditary Basis of Tolerance	73
5.7	Basic Mechanisms: Organic Contaminants.....	73
	5.7.1 Mechanisms of Genetic Controls: Candidate Genes	73
	5.7.2 Investigation and Classification of Enzymes and Proteins.....	74
	5.7.3 Transgenic Strategies.....	74
	5.7.4 Metal Transporters and Interactions in Membranes at Molecular Level	74
5.8	Feature Controlling the Metal Uptake.....	75
	5.8.1 Selection of Plant Species	75
	5.8.2 Characteristics of Medium	75
	5.8.3 Rhizosphere	75
	5.8.4 Vegetative Uptake.....	75
	5.8.5 Addition of Chelating Agent	75
5.9	Advantages of Phytoremediation	76
	5.9.1 Phytoremediation for Hydraulic Regulation of Pollutants	77
	5.9.2 Riparian Corridors.....	77
	5.9.3 Vegetative Cover	77
	5.9.4 Phytoremediation to Treat Metal Contaminants	77
	5.9.5 Constructed Wetlands.....	77
	5.9.6 Vegetative Caps	77
	5.9.7 Soil Conditioning	78
	5.9.8 Fortification of Riparian Corridors.....	78
5.10	Limitations of Phytoremediation Technology.....	78
	5.10.1 Relevance of Phytoremediation.....	80
	References.....	82
6	Concepts for Improving Phytoremediation by Plant Engineering	89
6.1	Introduction	90
6.2	Classic Genetic Studies and Modern Approach for Improving Phytoremediation	91
6.3	Improved Metal Sequestration, Metal Transporters, and Allied Biomolecules via Genetic Engineering	92

6.4	Genetic Manipulation of Metal-Sequestration Proteins and Peptides	93
6.5	Genetic Engineering for Encoding Metal Ion Transporters	94
6.6	Genetic Engineering of Enzymes to Enhance Phytovolatilization.....	96
6.7	Improving Zinc Phytoremediation Efficiency.....	97
	References.....	98
7	Biodiversity Prospecting for Phytoremediation of Metals in the Environment.....	103
7.1	Introduction	103
7.2	Metal Hyperaccumulators for Phytoremediation	104
7.2.1	Ornamental Plants	104
7.2.2	Serpentinophytes and Metal Hyperaccumulation	105
7.2.3	Vegetables Crops	105
7.2.4	Plant Products as Biosorbents of Toxic Metals	105
7.3	Elemental Allelopathy and Role of Hyperaccumulators and Serpentinophytes.....	106
7.4	Molecular and Transgenic Approaches for Phytoremediation.....	107
7.5	Phytoremediation Technology for Enhancing Chelation.....	107
	References.....	109
