# Engineering Applications of Soft Computing

 Springer

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	Soft Computing . . . . .	1
1.2	Fuzzy Logic . . . . .	2
1.3	Neural Networks. . . . .	3
1.4	Evolutionary Computation . . . . .	3
1.5	Definition of an Optimization Problem. . . . .	4
1.6	Classical Optimization . . . . .	6
1.7	Optimization with Evolutionary Computation. . . . .	8
1.8	Soft Computing in Engineering . . . . .	10
	References. . . . .	11
<b>2</b>	<b>Motion Estimation Algorithm Using Block-Matching and Harmony Search Optimization</b> . . . . .	13
2.1	Introduction . . . . .	14
2.2	Harmony Search Algorithm . . . . .	17
	2.2.1 The Harmony Search Algorithm . . . . .	17
	2.2.2 Computational Procedure. . . . .	19
2.3	Fitness Approximation Method. . . . .	20
	2.3.1 Updating the Individual Database . . . . .	20
	2.3.2 Fitness Calculation Strategy. . . . .	20
	2.3.3 HS Optimization Method. . . . .	23
2.4	Motion Estimation and Block-Matching . . . . .	24
2.5	Block-Matching Algorithm Based on Harmony Search with the Estimation Strategy. . . . .	26
	2.5.1 Initial Population . . . . .	27
	2.5.2 Tuning of the HS Algorithm . . . . .	29
	2.5.3 The HS-BM Algorithm . . . . .	29
	2.5.4 Discussion on the Accuracy of the Fitness Approximation Strategy. . . . .	31

2.6	Experimental Results . . . . .	34
2.6.1	HS-BM Results . . . . .	34
2.6.2	Results on H.264 . . . . .	36
2.7	Conclusions . . . . .	41
	References. . . . .	42
<b>3</b>	<b>Gravitational Search Algorithm Applied to Parameter Identification for Induction Motors . . . . .</b>	<b>45</b>
3.1	Introduction . . . . .	45
3.2	Problem Statement . . . . .	47
3.3	Gravitational Search Algorithm. . . . .	49
3.4	Experimental Results . . . . .	50
3.4.1	Induction Motor Parameter Identification. . . . .	51
3.4.2	Statistical Analysis . . . . .	55
3.5	Conclusions . . . . .	55
	References. . . . .	56
<b>4</b>	<b>Color Segmentation Using LVQ Neural Networks . . . . .</b>	<b>59</b>
4.1	Introduction . . . . .	59
4.1.1	Histogram Thresholding and Color Space Clustering . . . . .	60
4.1.2	Edge Detection . . . . .	61
4.1.3	Probabilistic Methods . . . . .	61
4.1.4	Soft-Computing Techniques . . . . .	62
4.1.5	Scheme . . . . .	62
4.2	Background Issues . . . . .	63
4.2.1	RGB Space Color . . . . .	63
4.2.2	Artificial Neural Networks. . . . .	63
4.3	Competitive Networks . . . . .	64
4.4	Learning Vectors Quantization Vectors. . . . .	66
4.5	Architecture of the Color Segmentation System . . . . .	66
4.6	Implementation . . . . .	68
4.7	Results and Discussion . . . . .	70
4.8	Conclusions . . . . .	74
	References. . . . .	74
<b>5</b>	<b>Global Optimization Using Opposition-Based Electromagnetism-Like Algorithm . . . . .</b>	<b>77</b>
5.1	Introduction . . . . .	77
5.2	Electromagnetism: Like Optimization Algorithm (EMO) . . . . .	80
5.2.1	Initialization. . . . .	80
5.2.2	Local Search . . . . .	81
5.2.3	Total Force Vector Computation . . . . .	82
5.2.4	Movement . . . . .	83

5.3	Opposition-Based Learning (OBL) . . . . .	84
5.3.1	Opposite Number . . . . .	84
5.3.2	Opposite Point . . . . .	84
5.3.3	Opposite-Based Optimization . . . . .	84
5.4	Opposition-Based Electromagnetism-Like Optimization Algorithm . . . . .	85
5.4.1	Opposition-Based Population Initialization . . . . .	85
5.4.2	Opposition-Based Production for New Generation . . . . .	87
5.5	Experimental Results . . . . .	88
5.5.1	Test Problems . . . . .	89
5.5.2	Parameter Settings for the Involved EMO Algorithms . . . . .	89
5.5.3	Results . . . . .	93
5.6	Conclusions . . . . .	98
	References . . . . .	98
<b>6</b>	<b>Multi-threshold Segmentation Using Learning Automata . . . . .</b>	<b>101</b>
6.1	Introduction . . . . .	101
6.2	Gaussian Approximation . . . . .	104
6.3	Learning Automata (LA) . . . . .	105
6.3.1	CARLA Algorithm . . . . .	107
6.4	Implementation . . . . .	109
6.5	Experimental Results . . . . .	111
6.5.1	LA Algorithm Performance in Image Segmentation . . . . .	111
6.5.2	Comparing the LA Algorithm Versus the EM and LM Methods . . . . .	115
6.6	Conclusions . . . . .	119
	References . . . . .	126
<b>7</b>	<b>Real-Time Gaze Control Using Neurofuzzy Prediction System . . . . .</b>	<b>129</b>
7.1	Introduction . . . . .	129
7.2	Adaptive Neurofuzzy Inference System . . . . .	130
7.2.1	ANFIS Architecture . . . . .	131
7.2.2	Hybrid Learning Algorithm . . . . .	134
7.3	Implementation . . . . .	134
7.3.1	Description . . . . .	134
7.3.2	Segmentation Algorithm and Localization . . . . .	135
7.3.3	Controller . . . . .	136
7.3.4	Predictor Design . . . . .	138
7.4	Results . . . . .	140
7.5	Conclusions . . . . .	141
	References . . . . .	141

<b>8</b>	<b>Clonal Selection Algorithm Applied to Circle Detection</b> . . . . .	143
8.1	Introduction . . . . .	143
8.2	Clonal Selection Algorithm. . . . .	146
	8.2.1 Definitions. . . . .	147
	8.2.2 CSA Operators . . . . .	147
8.3	Circle Detection Using CSA. . . . .	151
	8.3.1 Individual Representation . . . . .	151
8.4	Experimental Results . . . . .	155
	8.4.1 Parametric Setup . . . . .	155
	8.4.2 Error Score and Success Rate . . . . .	155
8.5	Conclusions . . . . .	161
	References. . . . .	162
<b>9</b>	<b>States of Matter Algorithm Applied to Pattern Detection</b> . . . . .	165
9.1	Introduction . . . . .	165
9.2	Gaussian Approximation. . . . .	168
9.3	States of Matter Search (SMS) . . . . .	169
	9.3.1 Definition of Operators . . . . .	169
	9.3.2 SMS Algorithm. . . . .	172
9.4	Fitness Approximation Method. . . . .	176
	9.4.1 Updating Individual Database . . . . .	176
	9.4.2 Fitness Calculation Strategy. . . . .	177
	9.4.3 Proposed Optimization SMS Method. . . . .	179
9.5	Pattern Detection Process . . . . .	180
9.6	PD Algorithm Based on SMS with the Estimation Strategy . . . . .	182
	9.6.1 The SMS-PD Algorithm . . . . .	183
9.7	Experimental Results . . . . .	185
9.8	Conclusions . . . . .	190
	References. . . . .	191
<b>10</b>	<b>Artificial Bee Colony Algorithm Applied to Multi-threshold Segmentation</b> . . . . .	193
10.1	Introduction . . . . .	193
10.2	Gaussian Approximation. . . . .	195
10.3	Artificial Bee Colony (ABC) Algorithm . . . . .	196
	10.3.1 Biological Bee Profile . . . . .	197
	10.3.2 Description of the ABC Algorithm . . . . .	197
10.4	Determination of Thresholding Values . . . . .	199
10.5	Experimental Results . . . . .	200
	10.5.1 Comparing the ABC Algorithm Versus the EM and LM Methods. . . . .	202
10.6	Conclusions . . . . .	213
	References. . . . .	213

<b>11</b>	<b>Learning Automata Applied to Planning Control</b> . . . . .	215
11.1	Introduction . . . . .	215
11.2	Planning Strategy Design . . . . .	218
11.2.1	Closed-Loop Planning Configuration . . . . .	219
11.2.2	Models and Projections into the Future . . . . .	220
11.2.3	Optimization and Method for Plan Selection . . . . .	221
11.3	Learning Automata . . . . .	223
11.3.1	CARLA Algorithm . . . . .	224
11.4	Implementation . . . . .	226
11.4.1	Level Control in a Surge Tank . . . . .	227
11.4.2	Planning System . . . . .	228
11.4.3	LA Optimization . . . . .	229
11.5	Results . . . . .	231
11.6	Conclusions . . . . .	235
	References . . . . .	236
<b>12</b>	<b>Fuzzy-Based System for Corner Detection</b> . . . . .	239
12.1	Introduction . . . . .	239
12.2	Fuzzy Rule-Based System . . . . .	241
12.2.1	Fuzzy System . . . . .	241
12.2.2	Robustness . . . . .	246
12.2.3	Corner Selection . . . . .	248
12.3	Experimental Results . . . . .	248
12.4	Performance Comparison . . . . .	250
12.4.1	Stability Criterion . . . . .	252
12.4.2	Noise Immunity . . . . .	253
12.4.3	Computational Effort . . . . .	254
12.4.4	Comparison Results . . . . .	254
12.5	Conclusions . . . . .	255
