
Jan G. De Gooijer

Elements of Nonlinear Time Series Analysis and Forecasting

 Springer

Contents

Preface	vii
1 INTRODUCTION AND SOME BASIC CONCEPTS	1
1.1 Linearity and Gaussianity	2
1.2 Examples of Nonlinear Time Series	4
1.3 Initial Data Analysis	9
1.3.1 Skewness, kurtosis, and normality	10
1.3.2 Kendall's (partial) tau	14
1.3.3 Mutual information coefficient	18
1.3.4 Recurrence plot	19
1.3.5 Directed scatter plot	21
1.4 Summary, Terms and Concepts	22
1.5 Additional Bibliographical Notes	22
1.6 Data and Software References	23
Exercises	25
2 CLASSIC NONLINEAR MODELS	29
2.1 The General Univariate Nonlinear Model	30
2.1.1 Volterra series expansions	30
2.1.2 State-dependent model formulation	32
2.2 Bilinear Models	33
2.3 Exponential ARMA Model	36
2.4 Random Coefficient AR Model	39
2.5 Nonlinear MA Model	39
2.6 Threshold Models	41
2.6.1 General threshold ARMA (TARMA) model	41
2.6.2 Self-exciting threshold ARMA model	42
2.6.3 Continuous SETAR model	44
2.6.4 Multivariate thresholds	45
2.6.5 Asymmetric ARMA model	47
2.6.6 Nested SETARMA model	49
2.7 Smooth Transition Models	51
2.8 Nonlinear non-Gaussian Models	53
2.8.1 Newer exponential autoregressive models	53

2.8.2	Product autoregressive model	54
2.9	Artificial Neural Network Models	56
2.9.1	AR neural network model	58
2.9.2	ARMA neural network model	61
2.9.3	Local global neural network model	62
2.9.4	Neuro-coefficient STAR model	65
2.10	Markov Switching Models	66
2.11	Application: An AR-NN model for EEG Recordings	69
2.12	Summary, Terms and Concepts	72
2.13	Additional Bibliographical Notes	72
2.14	Data and Software References	75
	Appendix	76
2.A	Impulse Response Functions	76
2.B	Acronyms in Threshold Modeling	78
	Exercises	81
3	PROBABILISTIC PROPERTIES	87
3.1	Strict Stationarity	88
3.2	Second-order Stationarity	90
3.3	Application: Nonlinear AR-GARCH model	91
3.4	Dependence and Geometric Ergodicity	95
3.4.1	Mixing coefficients	95
3.4.2	Geometric ergodicity	96
3.5	Invertibility	101
3.5.1	Global	101
3.5.2	Local	107
3.6	Summary, Terms and Concepts	110
3.7	Additional Bibliographical Notes	110
3.8	Data and Software References	111
	Appendix	112
3.A	Vector and Matrix Norms	112
3.B	Spectral Radius of a Matrix	114
	Exercises	115
4	FREQUENCY-DOMAIN TESTS	119
4.1	Bispectrum	120
4.2	The Subba Rao-Gabr Tests	126
4.2.1	Testing for Gaussianity	126
4.2.2	Testing for linearity	128
4.2.3	Discussion	129
4.3	Hinich's Tests	130
4.3.1	Testing for linearity	131
4.3.2	Testing for Gaussianity	132
4.3.3	Discussion	133

4.4	Related Tests	133
4.4.1	Goodness-of-fit tests	133
4.4.2	Maximal test statistics for linearity	136
4.4.3	Bootstrapped-based tests	136
4.4.4	Discussion	139
4.5	A MSFE-Based Linearity Test	140
4.6	Which Test to Use?	146
4.7	Application: A Comparison of Linearity Tests	148
4.8	Summary, Terms and Concepts	149
4.9	Additional Bibliographical Notes	149
4.10	Software References	151
	Exercises	151
5	TIME-DOMAIN LINEARITY TESTS	155
5.1	Lagrange Multiplier Tests	156
5.2	Likelihood Ratio Tests	168
5.3	Wald Test	178
5.4	Tests Based on a Second-order Volterra Expansion	179
5.5	Tests Based on Arranged Autoregressions	182
5.6	Nonlinearity vs. Specific Nonlinear Alternatives	186
5.7	Summary, Terms and Concepts	187
5.8	Additional Bibliographical Notes	188
5.9	Software References	190
	Appendix	191
	5.A Percentiles of LR-SETAR Test Statistic	191
	5.B Summary of Size and Power Studies	191
	Exercises	194
6	MODEL ESTIMATION, SELECTION, AND CHECKING	197
6.1	Model Estimation	198
6.1.1	Quasi maximum likelihood estimator	198
6.1.2	Conditional least squares estimator	202
6.1.3	Iteratively weighted least squares	223
6.2	Model Selection Tools	227
6.2.1	Kullback-Leibler information	227
6.2.2	The AIC, AIC _c , and AIC _u rules	228
6.2.3	Generalized information criterion: The GIC rule	230
6.2.4	Bayesian approach: The BIC rule	231
6.2.5	Minimum descriptive length principle	232
6.2.6	Model selection in threshold models	233
6.3	Diagnostic Checking	236
6.3.1	Pearson residuals	236
6.3.2	Quantile residuals	240
6.4	Application: TARSO Model of a Water Table	242

6.5	Summary, Terms and Concepts	246
6.6	Additional Bibliographical Notes	247
6.7	Data and Software References	250
	Exercises	251
7	TESTS FOR SERIAL INDEPENDENCE	257
7.1	Null Hypothesis	258
7.2	Distance Measures and Dependence Functionals	260
7.2.1	Correlation integral	260
7.2.2	Quadratic distance	260
7.2.3	Density-based measures	263
7.2.4	Distribution-based measures	265
7.2.5	Copula-based measures	266
7.3	Kernel-Based Tests	267
7.3.1	Density estimators	268
7.3.2	Copula estimators	269
7.3.3	Single-lag test statistics	270
7.3.4	Multiple-lag test statistics	272
7.3.5	Generalized spectral tests	273
7.3.6	Computing p -values	276
7.4	High-Dimensional Tests	278
7.4.1	BDS test statistic	278
7.4.2	Rank-based BDS test statistics	282
7.4.3	Distribution-based test statistics	284
7.4.4	Copula-based test statistics	286
7.4.5	A test statistic based on quadratic forms	290
7.5	Application: Canadian Lynx Data	291
7.6	Summary, Terms and Concepts	294
7.7	Additional Bibliographical Notes	295
7.8	Data and Software References	297
	Appendix	298
7.A	Kernel-based Density and Regression Estimation	298
7.B	Copula Theory	305
7.C	U- and V-statistics	308
	Exercises	310
8	TIME-REVERSIBILITY	315
8.1	Preliminaries	316
8.2	Time-Domain Tests	317
8.2.1	A bicovariance-based test	317
8.2.2	A test based on the characteristic function	319
8.3	Frequency-Domain Tests	322
8.3.1	A bispectrum-based test	322
8.3.2	A trispectrum-based test	323

8.4	Other Nonparametric Tests	324
8.4.1	A copula-based test for Markov chains	325
8.4.2	A kernel-based test	327
8.4.3	A sign test	328
8.5	Application: A Comparison of TR Tests	330
8.6	Summary, Terms and Concepts	332
8.7	Additional Bibliographical Notes	332
8.8	Software References	333
	Exercises	334
9	SEMI- AND NONPARAMETRIC FORECASTING	337
9.1	Kernel-based Nonparametric Methods	338
9.1.1	Conditional mean, median, and mode	338
9.1.2	Single- and multi-stage quantile prediction	341
9.1.3	Conditional densities	347
9.1.4	Locally weighted regression	352
9.1.5	Conditional mean and variance	355
9.1.6	Model assessment and lag selection	358
9.2	Semiparametric Methods	360
9.2.1	ACE and AVAS	360
9.2.2	Projection pursuit regression	363
9.2.3	Multivariate adaptive regression splines (MARS)	365
9.2.4	Boosting	369
9.2.5	Functional-coefficient AR models	374
9.2.6	Single-index coefficient model	378
9.3	Summary, Terms and Concepts	380
9.4	Additional Bibliographical Notes	382
9.5	Data and Software References	384
	Exercises	387
10	FORECASTING	391
10.1	Exact Least Squares Forecasting Methods	392
10.1.1	Nonlinear AR model	392
10.1.2	Self-exciting threshold ARMA model	394
10.2	Approximate Forecasting Methods	398
10.2.1	Monte Carlo	398
10.2.2	Bootstrap	399
10.2.3	Deterministic, naive, or skeleton	399
10.2.4	Empirical least squares	400
10.2.5	Normal forecasting error	401
10.2.6	Linearization	404
10.2.7	Dynamic estimation	406
10.3	Forecast Intervals and Regions	408
10.3.1	Preliminaries	408

10.3.2	Conditional percentiles	408
10.3.3	Conditional densities	413
10.4	Forecast Evaluation	415
10.4.1	Point forecast	415
10.4.2	Interval evaluation	419
10.4.3	Density evaluation	422
10.5	Forecast Combination	425
10.6	Summary, Terms and Concepts	426
10.7	Additional Bibliographical Notes	428
	Exercises	431
11	VECTOR PARAMETRIC MODELS AND METHODS	439
11.1	General Multivariate Nonlinear Model	440
11.2	Vector Models	441
11.2.1	Bilinear models	441
11.2.2	General threshold ARMA (TARMA) model	446
11.2.3	VSETAR with multivariate thresholds	449
11.2.4	Threshold vector error correction	452
11.2.5	Vector smooth transition AR	453
11.2.6	Vector smooth transition error correction	455
11.2.7	Other vector nonlinear models	455
11.3	Time-Domain Linearity Tests	458
11.4	Testing Linearity vs. Specific Nonlinear Alternatives	464
11.5	Model Selection Tools	471
11.6	Diagnostic Checking	472
11.6.1	Quantile residuals	474
11.7	Forecasting	476
11.7.1	Point forecasts	476
11.7.2	Forecast evaluation	478
11.8	Application: Analysis of Icelandic River Flow Data	481
11.9	Summary, Terms and Concepts	484
11.10	Additional Bibliographical Notes	485
11.11	Data and Software References	488
	Appendix	489
11.A	Percentiles of the LR-VTAR Test Statistic	489
11.B	Computing GIRFs	489
	Exercises	490
12	VECTOR SEMI- AND NONPARAMETRIC METHODS	495
12.1	Nonparametric Methods	496
12.1.1	Conditional quantiles	496
12.1.2	Kernel-based forecasting	498
12.1.3	K -nearest neighbors	501
12.2	Semiparametric methods	502

12.2.1	PolyMARS	502
12.2.2	Projection pursuit regression	504
12.2.3	Vector functional-coefficient AR model	506
12.3	Frequency-Domain Tests	510
12.4	Lag Selection	512
12.5	Nonparametric Causality Testing	514
12.5.1	Preamble	514
12.5.2	A bivariate nonlinear causality test statistic	515
12.5.3	A modified bivariate causality test statistic	516
12.5.4	A multivariate causality test statistic	518
12.6	Summary, Terms and Concepts	521
12.7	Additional Bibliographical Notes	521
12.8	Data and Software References	523
Appendix		523
12.A	Computing Multivariate Conditional Quantiles	523
12.B	Percentiles of the $\hat{R}(\ell)$ Test Statistic	525
