

INTRODUCTION TO ECONOMETRICS

Gary Koop

*Department of Economics
University of Strathclyde*

John Wiley & Sons, Ltd

Contents

Preface		ix
Chapter 1	An Overview of Econometrics	1
1.1	The importance of econometrics	1
1.2	Types of economic data	2
1.3	Working with data: graphical methods	6
1.4	Working with data: descriptive statistics and correlation	11
1.5	Chapter summary	26
	Exercises	26
Chapter 2	A Non-technical Introduction to Regression	29
2.1	Introduction	29
2.2	The simple regression model	30
2.3	The multiple regression model	42
2.4	Chapter summary	55
	Exercises	57
Chapter 3	The Econometrics of the Simple Regression Model	59
3.1	Introduction	59
3.2	A review of basic concepts in probability in the context of the regression model	60
3.3	The classical assumptions for the regression model	64
3.4	Properties of the ordinary least-squares estimator of β	67
3.5	Deriving a confidence interval for β	75
3.6	Hypothesis tests about β	77
3.7	Modifications to statistical procedures when σ^2 is unknown	78

3.8	Chapter summary	81
	Exercises	82
	Appendix 1: Proof of the Gauss–Markov theorem	84
	Appendix 2: Using asymptotic theory in the simple regression model	85
Chapter 4	The Econometrics of the Multiple Regression Model	91
4.1	Introduction	91
4.2	Basic results for the multiple regression model	92
4.3	Issues relating to the choice of explanatory variables	96
4.4	Hypothesis testing in the multiple regression model	102
4.5	Choice of functional form in the multiple regression model	109
4.6	Chapter summary	115
	Exercises	116
	Appendix: Wald and Lagrange multiplier tests	117
Chapter 5	The Multiple Regression Model: Freeing Up the Classical Assumptions	121
5.1	Introduction	121
5.2	Basic theoretical results	122
5.3	Heteroskedasticity	124
5.4	The regression model with autocorrelated errors	138
5.5	The instrumental variables estimator	149
5.6	Chapter summary	164
	Exercises	165
	Appendix: Asymptotic results for the OLS and instrumental variables estimators	168
Chapter 6	Univariate Time Series Analysis	173
6.1	Introduction	173
6.2	Time series notation	175
6.3	Trends in time series variables	177
6.4	The autocorrelation function	179
6.5	The autoregressive model	181
6.6	Defining stationarity	195
6.7	Modeling volatility	197
6.8	Chapter summary	205
	Exercises	207
	Appendix: MA and ARMA models	210
Chapter 7	Regression with Time Series Variables	213
7.1	Introduction	213
7.2	Time series regression when X and Y are stationary	214

7.3	Time series regression when Y and X have unit roots	217
7.4	Time series regression when Y and X have unit roots but are NOT cointegrated	227
7.5	Granger causality	227
7.6	Vector autoregressions	233
7.7	Chapter summary	247
	Exercises	248
	Appendix: The theory of forecasting	251
Chapter 8	Models for Panel Data	255
8.1	Introduction	255
8.2	The pooled model	256
8.3	Individual effects models	256
8.4	Chapter summary	271
	Exercises	272
Chapter 9	Qualitative Choice and Limited Dependent Variable Models	277
9.1	Introduction	277
9.2	Qualitative choice models	278
9.3	Limited dependent variable models	296
9.4	Chapter summary	304
	Exercises	306
Chapter 10	Bayesian Econometrics	309
10.1	An overview of Bayesian econometrics	309
10.2	The normal linear regression model with natural conjugate prior and a single explanatory variable	315
10.3	Chapter summary	326
	Exercises	326
	Appendix: Bayesian analysis of the simple regression model with unknown variance	328
Appendix A:	Mathematical Basics	333
Appendix B:	Probability Basics	338
Appendix C:	Basic Concepts in Asymptotic Theory	348
Appendix D:	Writing an Empirical Project	353
Tables		359
Table 1.	Area under the standard normal distribution $\Pr(0 \leq Z \leq z)$	359
Table 2.	Area under the Student t distribution for different degrees of freedom (DF), $\Pr(Z \geq z) = \alpha$	360
Table 3.	Percentiles of the chi-square distribution	361

Table 4a. Area under the F -distribution for different degrees of freedom, ν_1 and ν_2 , $\Pr(Z \geq \chi) = 0.05$	362
Table 4b. Area under the F -distribution for different degrees of freedom, ν_1 and ν_2 , $\Pr(Z \geq \chi) = 0.01$	363
Bibliography	364
Index	365
