Contents

1 **Introduction and Guide** 1

2 **Some Notions of Electromagnetism** 5
2.1 Maxwell's Equations and Their Solution 5
2.2 Relativistic Notation 7
2.3 Lorentz Force Law 9
2.4 Electromagnetic Energy–Momentum Tensor 11
2.5 Solution for Point Charge with Arbitrary Motion 14
2.5.1 Fields Due to a Single Point Charge 14
2.5.2 Larmor Formula for Radiated Power 21
2.5.3 Alternative Formula for Fields Due to a Point Charge 22
2.5.4 Point Charge with Constant Velocity 25

3 **Electromagnetic Mass** 31
3.1 Energy in the EM Fields of a Charged Particle 32
3.2 Momentum in the EM Fields of a Charged Particle 32
3.3 Inertial Mass 37
3.4 Self-Force 40
3.5 Radiation Reaction 43
3.6 Lorentz–Dirac Equation 44
3.7 A Toy Electron 45

4 **A Brief Excursion into General Relativity** 47
4.1 Static Homogeneous Gravitational Field 47
4.2 Equality of Inertial and Passive Gravitational Mass 51
4.3 Status of this Result 54
4.3.1 Geodesic Principle 54
4.3.2 Equality of Inertial and Passive Gravitational Mass Revisited 56
4.3.3 Do Einstein's Equations Explain Inertia? 59
4.4 Active Gravitational Mass 64

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.5 The Machian Program and the Brans–Dicke Theory 65
4.6 Conclusion 71

5 Momentum and Energy in the EM Fields of a Charge Dumbbell 73
5.1 Energy Considerations 73
5.2 Longitudinal Motion of the Dumbbell 75
5.2.1 Non-Relativistic Calculation 79
5.2.2 Relativistic Calculation 81
5.3 Transverse Motion of the Dumbbell 84
5.4 Neutral Particle 89
5.5 Spread of Field Momentum after an Acceleration 90

6 Self-Force for Transverse Linear Acceleration 93
6.1 Setting the Scene 93
6.2 Electric Self-Force 95
6.3 Magnetic Self-Force 100
6.4 Constant Velocity Case 100
6.5 Power Series Expansion of Self-Force 101
6.5.1 Expansions for Retarded Time and Retarded Point 102
6.5.2 Expansion for Total Self-Force 107
6.6 Interpreting the Expansion of the Self-Force 109
6.6.1 Divergent Term in the Self-Force and Mass Renormalisation 109
6.6.2 Constant Term in the Self-Force and Radiation Reaction 110

7 Self-Force for Axial Linear Acceleration 115
7.1 Setting the Scene 115
7.2 Self-Force 119
7.3 Constant Velocity Case 121
7.4 Power Series Expansion of Self-Force 123
7.4.1 Expansions for Retarded Times and Retarded Points 123
7.4.2 Expansion for Self-Force 127
7.5 Interpreting the Leading Order Term in the Self-Force 133

8 Self-Force for Transverse Rotational Motion 135
8.1 Setting the Scene 135
8.2 Retarded Times and Retarded Displacement Vectors 136
8.3 Power Series Expansion of Retarded Times 138
8.4 Power Series Expansion of Retarded Displacement Vectors 141
8.5 Power Series Expansion of Electric Self-Force 146
8.5.1 Electric Force of A on B 146
8.5.2 Electric Force of B on A 148
8.5.3 Electric Self-Force 151
8.6 Power Series Expansion of Magnetic Self-Force 151
8.7 Power Series Expansion of Total Self-Force and Interpretation 153

9 Self-Force for Longitudinal Rotational Motion 157
9.1 Setting the Scene 157
9.2 Retarded Times and Retarded Displacement Vectors 159
9.3 Power Series Expansion of Retarded Times 160
9.3.1 Expansion for t_+^A 160
9.3.2 Expansion for t_+^B 162
9.4 Power Series Expansion of Retarded Displacement Vectors 164
9.5 Power Series Expansion of Electric Self-Force 169
9.5.1 Electric Force of A on B 169
9.5.2 Electric Force of B on A 171
9.5.3 Electric Self-Force 174
9.6 Power Series Expansion of Magnetic Self-Force 174
9.7 Power Series Expansion of Total Self-Force and Interpretation 176
9.8 General Conclusion for the Four Scenarios 177

10 Summary of Results 179

11 Reconciling Energy- and Momentum-Derived EM Masses 183
11.1 Energy and Momentum in the Electron EM Fields 183
11.2 Measure and Integration Space 189
11.2.1 Charge for a Conserved Current Density 190
11.2.2 Four-Momentum for a Conserved Energy–Momentum Tensor 199
11.3 Role of the Binding Forces 212
11.3.1 Dynamics of a Collapsing Charged Spherical Shell 213
11.3.2 EM Fields of a Collapsing Charged Spherical Shell 216
11.3.3 Energy–Momentum Tensor for Collapsing Charged Spherical Shell 221
11.3.4 The Main Argument 224
11.3.5 Conclusion Regarding the Collapsing Charge Shell 226
11.3.6 Collapse Model for the Charge Dumbbell 228
11.4 Why the Redefined Four-Momentum Is Lorentz Covariant 230
11.5 New Density for the Field Four-Momentum 234
11.6 Binding Forces Revisited 239
11.6.1 Model for the Ever-Stable Charged Shell 242
11.6.2 Contrast with Collapsing Shell Model 251
11.6.3 The Redefinition Approach Revisited 256
11.6.4 Whatever Happened to Lorentz Covariance? 261

12 Rigidity in Relativity 263
12.1 Rigid Rods and Rigid Spheres 263
12.1.1 A Toy Electron 263
12.1.2 A Rigid Rod 266
12.1.3 Equation of Motion for Points on the Rod 268
12.1.4 A Frame for an Accelerating Observer 269

12.1.5 Lengths Measured by the Rigid Rod . . . 273
12.1.6 Properties of a Semi-Euclidean Frame . . . 278
12.1.7 Behaviour of a Rigid Rod . . . 279
12.1.8 Rigid Spheres and Instantaneous Transmission of Motion . 281
12.1.9 Rigid Electrons and Rigid Atoms . . . 285
12.1.10 A Note on the Pound–Rebka Experiment . . . 287
12.2 Rigid Motion . . . 293
12.2.1 General Motion of a Continuous Medium . . . 293
12.2.2 Rigid Motion of a Continuous Medium . . . 294
12.2.3 Rate of Strain Tensor . . . 295
12.2.4 Examples of Rigid Motion . . . 299
12.2.5 Rigid Motion Without Rotation . . . 301
12.2.6 Rigid Rotation . . . 304
12.2.7 Rigid Motion in Schwarzschild Spacetime . . . 306
12.3 Conclusion . . . 310

13 Mass in Elementary Particle Physics . . . 313
13.1 Energy and Mass . . . 313
13.2 Bound State Particles . . . 318
13.2.1 Generalities . . . 318
13.2.2 From Hydrogen to Positronium . . . 319
13.3 Quark Bound States . . . 326
13.3.1 Quark Masses . . . 328
13.3.2 Quarkonium . . . 329
13.3.3 Multiplets . . . 333
13.3.4 Light Quark Mesons . . . 339
13.3.5 Baryons . . . 345
13.3.6 Coleman–Glashow Relation . . . 359
13.3.7 Gell-Mann–Okubo Mass Formula . . . 361
13.3.8 Gürsey–Radicati Mass Formula . . . 365
13.4 Higgs Mechanism . . . 366
13.5 Alternatives . . . 375

14 Summary and Conclusion . . . 379
