

Contents

Hilbert Space Methods for Quantum Mechanics	1
D. Petz	
1 Hilbert Spaces	1
2 Postulates of Quantum Mechanics	13
3 Some Applications	25
References	31
Classical Information Theory	33
Y. Suhov	
1 Entropy	33
2 Source Coding	44
3 Channel Coding	53
4 Bibliographical Notes	64
References	64
Quantum Probability and Quantum Information Theory	65
H. Maassen	
1 Introduction	65
2 Why Classical Probability Does Not Suffice	67
3 Toward a Mathematical Model	74
4 Quantum Probability	80
5 Operations on Probability Spaces	88
6 Quantum Impossibilities	98
7 Quantum Novelties	104
References	108
Bipartite Quantum Entanglement	109
F. Benatti	
1 Introduction	109
2 Bipartite Entanglement	111
3 Entanglement Detection	120
4 Complete Positivity, Open Quantum Systems, and Entanglement	134
References	148

Field-Theoretical Methods	151
R. Alicki	
1 Introduction	151
2 The Quantum Harmonic Oscillator	152
3 Quantum Bosonic Fields	159
4 Coherent and Thermal States for Bosons	166
5 Second Quantization of Fermions	172
6 Further Reading	174
References	174
Quantum Entropy and Information	175
Nilanjana Datta	
1 Introduction	175
2 Preliminaries	176
3 Rudiments of Classical Information Theory	179
4 Quantum Entropy	185
5 Data Compression in Quantum Information Theory	187
6 Quantum Channels	193
7 Accessible Information and the Holevo Bound	200
References	214
Photonic Realization of Quantum Information Protocols	215
M. Genovese	
1 Introduction	215
2 Photon Entanglement	220
3 Optical Realizations of Quantum Information Protocols	232
4 Optical Quantum Computation Protocols	233
5 Quantum Communication	237
References	248
Physical Realizations of Quantum Information	253
F. de Melo and A. Buchleitner	
1 Introduction	253
2 A Single Qubit in Interaction with the Radiation Field	256
3 Qubit Entanglement Through the Jaynes–Cummings Interaction	268
References	274
Quantum Cryptography	277
D. Bruß and T. Meyer	
1 Introduction	277
2 Classical Cryptography	278
3 Quantum Cryptography	279
4 Eavesdropping Strategies	287
5 Unconditional Security of BB84	291
