Contents

Preface	xiii
Introduction	xvii
List of Conventions	xxi
List of Abbreviations	xxiii
Author	xxv

Part I Distribution of Extremes

1. Methods of Extreme Value Theory	3
1.1 Order Statistics	3
1.2 "Blocks" and "Runs" Approaches	8
1.3 Method of Recurrent Inequalities	11
1.4 Proofs	14
2. Maximum of Partial Sums	21
2.1 Erdős–Rényi Maximum of Partial Sums	21
2.2 Basic Inequalities	22
2.3 Limit Theorems for MPS	25
2.4 Proofs	31
3. Extremes in Samples of Random Size	41
3.1 Maximum of a Random Number of r.v.s	41
3.2 Number of Exceedances	44
3.3 Length of the Longest Head Run	47
3.4 Long Match Patterns	56
4. Poisson Approximation	65
4.1 Total Variation Distance	65
4.2 Method of a Common Probability Space	67
4.3 The Stein Method	68
4.4 Beyond Bernoulli	72
4.5 The Magic Factor	74
4.6 Proofs	80
5. Compound Poisson Approximation	91
5.1 Limit Theory	92
5.2 Accuracy of Compound Poisson Approximation	94
5.3 Proofs	96

6. Exceedances of Several Levels	101
6.1 CP Limit Theory	101
6.2 General Case	104
6.3 Accuracy of Approximation	109
6.4 Proofs	111
7. Processes of Exceedances	121
7.1 One-Level EPPE	121
7.2 Excess Process	123
7.3 Complete Convergence to CP Processes	124
7.4 Proofs	127
8. Beyond Compound Poisson	131
8.1 Excess Process	131
8.2 Complete Convergence	135
8.3 Proofs	137
 Part II Statistics of Extremes	
9. Inference on Heavy Tails	143
9.1 Heavy-Tailed Distribution	144
9.2 Estimation Methods	147
9.3 Tail Index Estimation	153
9.4 Estimation of Extreme Quantiles	167
9.5 Estimation of the Tail Probability	174
9.6 Proofs	181
10. Value-at-Risk	191
10.1 Value-at-Risk and Expected Shortfall	191
10.2 Traditional Methods of VaR Estimation	196
10.3 VaR and ES Estimation from Heavy-Tailed Data	198
10.4 VaR over Different Time Horizons	207
10.5 Technical Analysis of Financial Data	209
10.5.1 Technical versus Fundamental Analyses	209
10.5.2 Axioms of the Technical Analysis	211
10.5.3 Basic Elliot Waves	214
10.5.4 Moving Average	216
10.5.5 MACD	218
10.5.6 Breakout (Fractal) Signal	218
10.5.7 RSI	220
10.5.8 TA Tools for Dynamic Risk Measurement	220
11. Extremal Index	225
11.1 Preliminaries	225
11.2 Estimation of the Extremal Index	230
11.3 Proofs	234

12. Normal Approximation	237
12.1 Accuracy of Normal Approximation	237
12.2 Stein's Method	240
12.2.1 Normal Approximation	241
12.2.2 Characterization of Smooth Distributions	245
12.2.3 Characterization of Discrete Distributions	247
12.2.4 Proofs	249
12.3 Self-Normalized Sums of Random Variables	252
12.3.1 Ratio of Sums of Random Variables	253
12.3.2 Student's Statistic	259
12.3.3 Proofs	267
13. Lower Bounds	273
13.1 Preliminary Results	274
13.2 Fréchet–Rao–Cramér Inequality	280
13.3 Information Index	282
13.4 Continuity Moduli	285
13.5 Tail Index and Extreme Quantiles	289
13.6 Proofs	293
14. Appendix	303
14.1 Probability Distributions	303
14.2 Properties of Distributions	307
14.3 Probabilistic Identities and Inequalities	310
14.4 Distances	317
14.5 Large Deviations	321
14.6 Elements of Renewal Theory	326
14.7 Dependence	330
14.8 Point Processes	337
14.9 Slowly Varying Functions	339
14.10 Useful Identities and Inequalities	341
References	351
Index	369
