Foreword	<i>xxxiii</i>
Preface	<i>xxxv</i>
Acknowledgments	<i>xxxvii</i>

1	Cyber–Physical Systems in Smart Cities – Mastering Technological, Economic, and Social Challenges	1
	<i>Martina Fromhold-Eisebith</i>	
1.1	Introduction	1
1.2	Setting the Scene: Demarcating the Smart City and Cyber–Physical Systems	3
1.3	Process Fields of CPS-Driven Smart City Development	4
1.4	Economic and Social Challenges of Implementing the CPS-Enhanced Smart City	10
1.5	Conclusions: Suggestions for Planning the CPS-Driven Smart City	15
	Final Thoughts	17
	Questions	18
	References	18
2	Big Data Analytics Processes and Platforms Facilitating Smart Cities	23
	<i>Pethuru Raj and Sathish A. P. Kumar</i>	
2.1	Introduction	24
2.2	Why Big Data Analytics (BDA) Is Significant for Smarter Cities	24
2.3	Describing the Big Data Paradigm	26
2.4	The Prominent Sources of Big Data	27
2.4.1	The Salient Implications of Big Data	27
2.4.2	Information and Communication Infrastructures for Big Data and Its Platforms	28

2.4.3	Transitioning from Big Data to Big Insights	29
2.5	Describing Big Data Analytics (BDA)	29
2.6	The Big Trends and Use Cases of Big Data Analytics	31
2.6.1	Customer Satisfaction Analysis	32
2.6.2	Market Sentiment Analysis	32
2.6.3	Epidemic Analysis	32
2.6.4	Using Big Data Analytics in Healthcare	33
2.6.5	Analytics of Machine Data by Splunk	34
2.7	The Open Data for Next-Generation Cities	38
2.8	The Big Data Analytics (BDA) Platforms	39
2.8.1	Civitas: The Smart City Middleware	42
2.8.2	Hitachi Smart City Platform	43
2.8.3	Data Collection	44
2.8.4	Data Analysis	44
2.8.5	Application Coordination	45
2.9	Big Data Analytics Frameworks and Infrastructure	45
2.9.1	Apache Hadoop Software Framework	46
2.9.2	NoSQL Databases	48
2.10	Summary	50
	Final Thoughts	51
	Questions	51
	References	52
3	Multi-Scale Computing for a Sustainable Built Environment	53
	<i>Massimiliano Manfren</i>	
3.1	Introduction	53
3.2	Modeling and Computing for Sustainability Transitions	55
3.2.1	Multilevel Perspective Modeling	56
3.2.2	Technological and Social Learning	57
3.2.3	Multidisciplinary System Thinking	58
3.2.4	Long-Term Thinking for the Built Environment	59
3.2.5	Data and Modeling Techniques	63
3.3	Multi-Scale Modeling and Computing for the Built Environment	66
3.3.1	Virtual Prototyping for Design Optimization	67
3.3.2	Performance Optimization Across Building Life Cycle Phases	68
3.4	Research in Modeling and Computing for the Built Environment	70
3.4.1	Building Energy Balance Analysis	74
3.4.2	Forward/Inverse Modeling and Visualization Techniques	76
3.4.3	Workflows and Integration of Modeling Strategies	76
3.4.4	Research Advances in Modeling and Computing	81
	Final Thoughts	82
	Questions	84
	References	84

4	Autonomous Radios and Open Spectrum in Smart Cities	99
	<i>Corey D. Cooke and Adam L. Anderson</i>	
4.1	Introduction	99
4.2	Candidate Wireless Technologies	101
4.2.1	Open Spectrum	101
4.2.2	5G Wireless Technologies	103
4.2.3	Internet of Things (IoT)	104
4.3	PHY and MAC Layer Issues in Cognitive Radio Networks	105
4.3.1	Spectrum Sensing	106
4.3.1.1	Detection Methods	106
4.3.1.2	Cooperative Spectrum Sensing	107
4.3.1.3	Other Sensing Issues	107
4.3.2	Spectrum Management and Handoff	108
4.3.3	Rendezvous Problem	109
4.3.4	Coexistence	109
4.4	Frequency Envelope Modulation (FEM)	110
4.4.1	Network Self-Configuration	112
4.4.2	Physical Layer Performance	113
4.4.3	Experimental Results	115
4.5	Conclusion	116
	Final Thoughts	117
	Questions	118
	References	118
5	Mobile Crowd-Sensing for Smart Cities	125
	<i>Chandreyee Chowdhury and Sarbani Roy</i>	
5.1	Introduction	125
5.2	Overview of Mobile Crowd-Sensing	127
5.2.1	Categories of Crowd-sensing	127
5.2.2	Architecture of Mobile Crowd-sensing	127
5.2.3	Applications of Mobile Crowd-sensing in Smart City	131
5.2.3.1	Applications in Infrastructure	131
5.2.3.2	Environmental Applications	134
5.2.3.3	Social Applications	134
5.3	Issues and Challenges of Crowd-sensing in Smart Cities	135
5.3.1	Task Assignment Problem	135
5.3.2	User Profiling and Trustworthiness	139
5.3.3	Incentive Mechanisms	140
5.3.4	Localized Analytics	141
5.3.5	Security and Privacy	142
5.4	Crowd-sensing Frameworks for Smart City	144
5.4.1	Here- <i>n</i> -Now Framework	144
5.4.2	Crowd-sensing Framework based on XMPP	146

- 5.4.3 **McSense** 146
 - 5.4.4 **Supporting Framework for Crowd-sensing Apps** 148
 - 5.5 **Conclusion** 149
 - Final Thoughts** 149
 - Questions** 150
 - References** 150
 - 6 Wide-Area Monitoring and Control of Smart Energy Cyber-Physical Systems (CPS)** 155
 - Nilanjan R. Chaudhuri*
 - 6.1 **Introduction** 155
 - 6.2 **Challenges and Opportunities** 156
 - 6.2.1 **Wide-Area Monitoring: Damping, Frequency, and Mode-shape Estimation** 156
 - 6.2.2 **Wide-Area Damping Control: Latency Compensation** 157
 - 6.2.3 **Wide-Area Damping Control with Wind Farms** 159
 - 6.3 **Solutions** 159
 - 6.3.1 **Phasor Approach** 159
 - 6.3.2 **Wide-Area Monitoring: Damping, Frequency, and Mode-Shape Estimation** 161
 - 6.3.3 **Test System: 16-Machine, 5-Area System** 162
 - 6.3.3.1 **Simulation Results** 163
 - 6.3.4 **Wide-Area Damping Control: Latency Compensation** 166
 - 6.3.4.1 **Simulation Results** 168
 - 6.3.5 **Wide-Area Damping Control with Wind Farms** 169
 - 6.3.5.1 **DFIG-based Wind Farm Modeling** 169
 - 6.3.5.2 **Rotor Side Converter (RSC) Control** 171
 - 6.3.5.3 **Grid Side Converter (GSC) Control** 171
 - 6.3.5.4 **Control Input** 172
 - 6.3.5.5 **Coordinated Control Design** 172
 - 6.3.5.6 **Simulation Results** 172
 - 6.4 **Conclusions and Future Direction** 173
 - Final Thoughts** 175

- 8 Smart Ecology of Cities: Integrating Development Impacts on Ecosystem Services for Land Parcels 209**
Marc Morrison, Ravi S. Srinivasan, and Cynnamon Dobbs
- 8.1 Introduction 209
- 8.2 Need for Smart Ecology of Cities 212
- 8.3 Ecosystem Service Modeling (CO₂ Sequestration, PM10 Filtration, Drainage) 214
- 8.3.1 Overview of Ecosystem Services in Urban Contexts 214
- 8.3.2 CO₂ Sequestration 215
- 8.3.3 PM10 Filtration 217
- 8.3.4 Drainage 218
- 8.4 Methodology 219
- 8.4.1 Carbon Sequestration 219
- 8.4.2 Drainage 224
- 8.4.3 PM10 Filtration 228
- 8.5 Implementation of Development Impacts in Dynamic-SIM Platform 231
- 8.6 Discussion (Assumptions, Limitations, and Future Work) 234
- 8.7 Conclusion 235
- Final Thoughts 236
- Questions 236
- References 236

- 9 Data-Driven Modeling, Control, and Tools for Smart Cities 243**
Madhur Behl and Rahul Mangharam
- 9.1 Introduction 245
- 9.1.1 Contributions 247

9.1.2	Experimental Validation and Evaluation	248
9.2	Related Work	248
9.3	Problem Definition	250
9.3.1	DR Baseline Prediction	250
9.3.2	DR Strategy Evaluation	251
9.3.3	DR Strategy Synthesis	251
9.4	Data-Driven Demand Response	252
9.4.1	Data Description	252
9.4.2	Data-Driven DR Baseline	253
9.4.3	Data-Driven DR Evaluation	253
9.5	DR Synthesis with Regression Trees	254
9.5.1	Model-Based Control with Regression Trees	254
9.5.2	DR Synthesis Optimization	256
9.6	The Case for Using Regression Trees for Demand Response	259
9.7	DR-Advisor: Toolbox Design	261
9.8	Case Study	263
9.8.1	Building Description	263
9.8.2	Model Validation	265
9.8.3	Energy Prediction Benchmarking	265
9.8.4	DR Evaluation	266
9.8.5	DR Synthesis	268
9.8.5.1	Revenue from Demand Response	271
9.9	Final Thoughts	271
	Questions	272
	References	272
10	Bringing Named Data Networks into Smart Cities	275
	<i>Syed Hassan Ahmed, Safdar Hussain Bouk, Dongkyun Kim, and Mahasweta Sarkar</i>	
10.1	Introduction	275
10.2	Future Internet Architectures	278
10.2.1	Data-Oriented Network Architecture (DONA)	278
10.2.2	Network of Information (NetInf)	279
10.2.3	Publish Subscribe Internet Technology (PURSUIT)	281
10.3	Named Data Networking (NDN)	282
10.4	NDN-based Application Scenarios for Smart Cities	285
10.4.1	NDN in IoT for Smart Cities	285
10.4.2	NDN in Smart Grid for Smart Cities	287
10.4.3	NDN in WSN for Smart Cities	288
10.4.4	NDN in MANETs for Smart Cities	290
10.4.5	NDN in VANETs for Smart Cities	293
10.4.6	NDN in Climate Data Communications	296

- 10.5 Future Aspects of NDN in Smart Cities 297
- 10.5.1 NDN Content/Data 297
- 10.5.2 Naming Content/Data in NDN 298
- 10.5.3 NDN Data Structures 299
- 10.5.4 NDN Message Forwarding 299
- 10.5.5 Content Discovery in NDN 300
- 10.5.6 NDN in Dynamic Network Topology 301
- 10.5.7 Content Caching in NDN 301
- 10.5.8 Security and Privacy 302
- 10.5.9 Evaluation Methods 303
- 10.6 Conclusion 303
- Final Thoughts 304
- Questions 304
- References 304
- 11 Human Context Sensing in Smart Cities 311**
Juhi Ranjan, Erin Griffiths, and Kamin Whitehouse
- 11.1 Introduction 311
- 11.2 Human Context Types 312
- 11.2.1 Physiological Context 313
- 11.2.2 Emotive Context 314
- 11.2.3 Functional Context 315
- 11.2.4 Location Context 316
- 11.3 Sensing Technologies 317
- 11.3.1 Video and Audio 317

28 Significance of Automated Driving in Japan 793

Sadayuki Tsugawa

28.1	Introduction	793
28.2	Definitions of Automated Driving Systems	794
28.3	A History of Research and Development of Automated Driving Systems	795
28.3.1	Classification of Automated Driving Systems	795
28.3.2	The First Period of Automated Driving Systems	796
28.3.3	The Second Period of Automated Driving Systems	798
28.3.4	The Third Period of Automated Driving Systems	798
28.3.5	The Fourth Period of Automated Driving Systems	801
28.4	Expected Benefits of Automated Driving	804
28.4.1	Safety	804
28.4.2	Efficiency	804
28.5	Issues of Automated Driving for Market Introduction	805
28.5.1	Performance of Human Drivers	805
28.5.2	What we Learned from Experiments	805
28.5.3	Reliability and MTBF Requirements of the Systems and the Devices	806

28.5.4	Issues on Human Factors	807
28.6	Possible Market Introduction of Automated Driving Systems in Japan	808
28.6.1	Population Issues	808
28.6.2	Small, Low-Speed Automated Vehicles	809
28.6.3	Automated Truck Platoons	813
28.6.4	Cooperative Adaptive Cruise Control	814
28.7	Conclusion	815
