Contents

Preface — V

1 Attractor and its dimension estimation — 1
1.1 Global attractor and estimation of Hausdorff and fractal dimensions — 1
1.2 Kuramoto–Sivashinsky equation — 6
1.3 A type of nonlinear viscoelastic wave equation — 25
1.4 Coupled KdV equations — 38
1.5 Davey–Stewartson equation — 51
1.6 Derivative Ginzburg–Landau equation — 62
1.7 Ginzburg–Landau model in superconductivity — 78
1.8 Landau–Lifshitz–Maxwell equation — 86
1.9 Nonlinear Schrödinger–Boussinesq equations — 108
1.10 A new method to prove existence of a strong topology attractor — 123
1.11 Nonlinear KdV–Schrödinger equation — 131
1.12 The Landau–Lifshitz equation on a Riemannian manifold — 145
1.13 The dissipation Klein–Gordon–Schrödinger equations on R^3 — 165
1.14 Two-dimensional unbounded region derivative Ginzburg–Landau equation — 181
1.15 The relation between attractor and turbulence — 193

2 Inertial manifold — 201
2.1 The inertial manifold for a class of nonlinear evolution equations — 202
2.2 Inertial manifold and normal hyperbolicity property — 221
2.3 The finite-dimensional inertial form for the one-dimensional generalized Ginzburg–Landau equation — 258
2.4 The existence of inertial manifolds for the generalized KS equation — 276

3 The approximate inertial manifold — 307
3.1 Two-dimensional Navier–Stokes equation — 307
3.2 The Gevrey regularity of solutions — 316
3.3 Time analyticity of solution for a class of dissipative nonlinear evolution equations — 323
3.4 Two-dimensional Ginzburg–Landau equation — 337
3.5 Bernard convection equation — 350
3.6 Long wave–short wave (LS) equation — 362

Bibliografische Informationen
http://d-nb.info/113136922X

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.7 One-dimensional ferromagnetic chain equation — **375**
3.8 Nonlinear Schrödinger equation — **383**
3.9 The convergence of approximate inertial manifolds — **394**

Bibliography — 419

Index — 429
