Part One General Topology

CHAPTER I

Sets

1. Some basic terminology	3
2. Denumerable sets	6
3. Zorn's lemma	10

CHAPTER II

Topological Spaces

1. Open and closed sets	17
2. Connected sets	25
3. Compact spaces	29
4. Separation by continuous functions	38

CHAPTER III

Continuous Functions on Compact Sets

1. The Stone-Weierstrass theorem	47
2. Ideals of continuous functions	51

Part Two Banach Spaces and the Calculus

CHAPTER IV

Banach Spaces

1. Definitions and the Hahn-Banach theorem	61
2. Banach algebras	66
3. The linear extension theorem	72

4. Completion of a normed vector space	73
5. Spaces with operators	77
<i>Appendix: Convex sets</i>	80
1. The Krein-Milman theorem	80
2. Mazur's theorem.	85

CHAPTER V

Differential Calculus

1. Integration in one variable	93
2. The derivative as a linear map	95
3. Properties of the derivative	97
4. Mean value theorem	102
5. The second derivative	104
6. Higher derivatives and Taylor's formula	107
7. Partial derivatives	112
8. Differentiating under the integral sign	116
9. Differentiation of sequences	117

CHAPTER VI

Inverse Mappings and Differential Equations

1. The inverse mapping theorem	121
2. The implicit mapping theorem	125
3. Existence theorem for differential equations	126
4. Local dependence on initial conditions	131
5. Global smoothness of the flow	136

Part Three

Functional Analysis

CHAPTER VII

Hilbert Space

1. Hermitian forms	149
2. Functionals and operators	157
3. The spectral theorem for compact hermitian operators	164
4. The spectral theorem for hermitian operators	166
5. Orthogonal projections	171
6. Schur's lemma	173
7. The Morse-Palais lemma	174

CHAPTER VIII

The Open Mapping Theorem, Factor Spaces, and Duality

1. The open mapping theorem	183
2. Orthogonality	187
3. Applications of the open mapping theorem	190

CHAPTER IX

Compact and Fredholm Operators

1. Compact operators	195
2. Fredholm operators and the index	197
3. Spectral theorem for compact operators	205
4. Ascoli's theorem	211
5. Application to integral equations	212

Part Four

Integration in Measured Spaces

CHAPTER X

The General Integral

1. Measured spaces, measurable maps, and positive measures	222
2. The integral of step maps	235
3. The \mathcal{L}^1 -completion	237
4. Properties of the integral: First part	243
5. Properties of the integral: Second part	246
6. Approximations	255
7. Extension of positive measures from algebras to σ -algebras	260
8. Product measures and integration on a product space	265
9. The Lebesgue integral in \mathbf{R}^p	273

CHAPTER XI

Duality and Representation Theorems

1. The Hilbert space $L^2(\mu)$	285
2. Duality between $L^1(\mu)$ and $L^\infty(\mu)$	288
3. Vectorial measures	299
4. The L^p spaces, $1 < p < \infty$	311

Part Five
Integration on Locally Compact
and Euclidean Spaces

CHAPTER XII

Integration and Measures on Locally Compact Spaces

1.	Positive and bounded functionals on $C_c(X)$	323
2.	Positive functionals as integrals	326
3.	Regular positive measures	336
4.	Bounded functionals as integrals	337
5.	Localization of a measure and of the integral.	339
6.	Product measures on locally compact spaces	342

CHAPTER XIII

Integration on Locally Compact Groups

1.	Topological groups	347
2.	The Haar integral, uniqueness	351
3.	Existence of the Haar integral	356
4.	Measures on factor groups and homogeneous spaces	359

CHAPTER XIV

The Fourier Integral and Convolutions

1.	The Schwartz space	365
2.	The Fourier inversion formula	370
3.	The Poisson summation formula	372
4.	Convolution and regularization in \mathcal{L}^p	373

CHAPTER XV

Distributions

1.	Definition and examples	379
2.	Support and localization	382
3.	Derivation of distributions	386
4.	Distributions with discrete support	387

Part Six Global Analysis

CHAPTER XVI

Local Integration of Differential Forms

1.	Sets of measure 0	395
2.	Change of variables formula	396
3.	Differential forms	405
4.	Inverse image of a form	410
	<i>Appendix</i>	414

CHAPTER XVII

Manifolds

1.	Atlases, charts, morphisms	421
2.	Submanifolds	425
3.	Tangent spaces	431
4.	Partitions of unity	434
5.	Manifolds with boundary	437
6.	Vector fields and global differential equations	442

CHAPTER XVIII

Integration and Measures on Manifolds

1.	Differential forms on manifolds	445
2.	Orientation	449
3.	The measure associated with a differential form	451
4.	Stokes' theorem for a rectangular simplex	453
5.	Stokes' theorem on a manifold	455
6.	Stokes' theorem with singularities	459
