<b>Part I Kinetic Theory of Fluids</b>	<b>1</b>
<b>1 Why a Kinetic Theory of Fluids?</b>	<b>3</b>
1.1 The Navier–Stokes Equation	3
1.1.1 Elementary Derivation of the Navier–Stokes Equations	5
1.1.2 Navier–Stokes Equations in Lagrangian Form	8
1.1.3 Navier–Stokes Equations in Coordinate Form	10
1.2 Computational Aspects of the Navier–Stokes Equations	10
1.2.1 Why Is the Reynolds Number so Large?	11
1.3 The Benefits of Kinetic Extra Dimensions	13
1.3.1 Molecular Streaming versus Fluid Advection	14
1.3.2 Molecular Relaxation versus Momentum Diffusivity	15
1.4 Summary	16
References	16
Exercises	16
<b>2 Boltzmann’s Kinetic Theory</b>	<b>17</b>
2.1 Atomistic Dynamics	17
2.2 Statistical Dynamics: Boltzmann and the BBGKY Hierarchy	19
2.3 The Born–Bogoliubov–Green–Kirkwood–Yvon (BBGKY) Hierarchy	20
2.4 Back to Boltzmann	22
2.4.1 Two-Body Scattering	23
2.4.2 Spatial Ordering in Dilute Gases	26
2.4.3 Two-Body Scattering Problem	27
2.4.4 Distinguished Potentials	28
2.4.5 Molecular Chaos (Stosszahlansatz)	32
2.5 Local and Global Equilibria	33
2.5.1 Local Equilibria and Equation of State	35
2.5.2 The Evershifting Battle	38
2.6 Summary	40
References	40
Exercises	41
<b>3 Approach to Equilibrium, the <math>H</math>-Theorem and Irreversibility</b>	<b>42</b>
3.1 Approach to Equilibrium: the Second Principle of Thermodynamics	43
3.2 Approach to Equilibrium, the $H$ -Theorem	44

3.2.1	Sketch of the Proof of the $H$ -Theorem	45
3.2.2	$H$ -theorem and Irreversibility	47
3.3	Collisionless Vlasov Equilibria	49
3.4	The Boltzmann Equation in Modern Mathematics	50
3.5	Summary	54
	References	55
	Exercises	55
<b>4</b>	<b>Transport Phenomena</b>	<b>56</b>
4.1	Length Scales and Transport Phenomena	56
4.2	Mean-Free Path (Again!)	58
4.3	Transport Parameters: Macroscopic Picture	60
4.3.1	Mass Diffusivity	62
4.3.2	Momentum Diffusivity: Kinematic Viscosity	63
4.3.3	Energy Diffusivity: Thermal Conductivity	64
4.4	Transport Parameters: Kinetic Picture	65
4.4.1	The Structure of Dissipation: Micro versus Macro	67
4.5	Dimensionless Numbers	67
4.6	Beyond Fick's Law: Non-Local and Nonlinear Transport	68
4.7	Summary	69
	References	69
	Exercises	69
<b>5</b>	<b>From Kinetic Theory to Navier–Stokes Hydrodynamics</b>	<b>70</b>
5.1	From Kinetic Theory to Hydrodynamics: Heuristic Derivation	70
5.1.1	Moment Balance Equations	72
5.1.2	Closures: the Enslaving Principle	75
5.2	The Hilbert expansion	77
5.3	Beyond Hilbert: the Chapman–Enskog Multiscale Expansion	80
5.3.1	Higher-Order Hydrodynamics	82
5.4	Summary	82
	References	83
	Exercises	83
<b>6</b>	<b>Generalized Hydrodynamics Beyond Navier–Stokes</b>	<b>84</b>
6.1	Grad's Thirteen-Moment Theory	84
6.2	Grad's Approach in (Some) More Detail	87
6.3	R13: Regularized Grad-13 Expansion	89
6.4	Linearized Collision Operator	90
6.4.1	The CSF Spectral Decomposition	92
6.5	Summary: Grad versus Chapman–Enskog	96
	References	97
	Exercises	97

<b>7 Kinetic Theory of Dense Fluids</b>	<b>98</b>
7.1 Cautionary Remark	98
7.2 Finite-Density Extension of the Boltzmann Equation	98
7.3 The BBGKY Hierarchy	100
7.3.1 Statistical Mechanics: The Liouville Equation	101
7.3.2 Liouville Theorem	104
7.3.3 Taking Averages	105
7.3.4 Many-Body Equilibria of the Liouville Equation	108
7.4 Reduced Liouville Equations and the BBGKY Hierarchy	109
7.5 Two-Body Closures	112
7.5.1 Short and Mid-Range Interactions	115
7.6 Theories of Correlation Functions	117
7.7 The Enskog Equation	119
7.8 Entry Computers: Molecular Dynamics	121
7.9 Summary	123
References	123
Exercises	124
<b>8 Model Boltzmann Equations</b>	<b>125</b>
8.1 On Models and Theory	125
8.2 Bhatnagar–Gross–Krook Model Equation	125
8.3 Generalized BGK Models	128
8.3.1 Multi-Relaxation BGK	128
8.3.2 Multi-Stage BGK	129
8.4 Discrete Velocity Models	130
8.5 BGK Is Not (Necessarily) a Dilute-Gas Approximation	133
8.6 Summary	135
References	135
Exercises	135
<b>9 Stochastic Particle Dynamics</b>	<b>136</b>
9.1 Langevin Dynamics	136
9.2 Brownian Motion	139
9.2.1 Link to the Diffusion Equation	142
9.3 A Note on Coarse-Graining: Boltzmann versus Langevin	143
9.4 More on Langevin Dynamics	144
9.4.1 The Kramers Problem and First Passage Time	144
9.4.2 Driven Systems	147
9.5 Beyond Brownian Motion	148
9.5.1 Correlated Noise and Memory Effects	149
9.5.2 Nonlinear Friction	150
9.5.3 Runaway Electrons in Plasmas	150
9.5.4 Active Matter	151

9.6	Back to Phase Space: The Fokker–Planck Equation	152
9.6.1	Fokker–Planck Equation for Nonlinear Processes	154
9.7	Summary	155
	References	156

**Part VI Beyond Newtonian Mechanics:  
Quantum and Relativistic Fluids**

<b>32</b>	<b>Quantum Lattice Boltzmann (QLB)</b>	<b>621</b>
32.1	Fluid Formulation of Quantum Mechanics	621
32.2	The Fluid Formulation of the Schrödinger Equation	623
32.2.1	Relativistic Quantum Mechanics: the Dirac Equation	625
32.2.2	The Majorana Representation	628
32.2.3	Dirac to Schrödinger: the Enslaving Approximation	630
32.2.4	The Interacting Case	632
32.3	The Quantum LBE	632
32.4	Time Marching	633
32.4.1	The QLB Dispersion Relation and Lorentz Invariance	635
32.5	Numerical Tests in One Space Dimension	637
32.5.1	Free Particle Motion	638
32.5.2	Harmonic Oscillator	639
32.5.3	Scattering Over a Rectangular Barrier	640
32.6	Multi-Dimensional QLB	640
32.6.1	Quantum LBE: Move, Turn and Collide	642
32.7	QLB is a Genuine Dirac Solver	643
32.8	The Lattice Wigner Equation	644
32.9	Summary	647

32.10 Appendix: Spinors	647
References	648
Exercises	649
<b>33 QLB for Quantum Many-Body and Quantum Field Theory</b>	<b>650</b>
33.1 The Quantum $N$ -Body Problem	650
33.2 Numerical Quantum Many-Body Methods	651
33.2.1 Quantum Monte Carlo Methods	651
33.2.2 Variational Monte Carlo	652
33.2.3 Matrix Eigenvalue Methods: Exact Diagonalization	653
33.2.4 Dynamic Minimization	653
33.2.5 Quantum LB as the “Perfect” Lattice Monte Carlo?	654
33.3 Electron-Density Functional Theory	655
33.3.1 Kinetic Approach to Electronic Density Functional Theory	656
33.4 Lattice Boltzmann for Quantum Field Theory	656
33.4.1 Second Quantization and Heisenberg Interaction Representation	657
33.4.2 Quantum Fields in Spatially Extended Systems	660
33.4.3 LB for $(1 + 1)$ Quantum Field Theory	662
33.5 Quantum LB for Quantum Computing	663
33.5.1 Bits and Qubits	664
33.5.2 Hamiltonians and Circuits	666
33.6 Quantum Random Walks	667
33.6.1 QLB is a Quantum Random Walk	668
33.7 Quantum Simulators for Classical Kinetic Theory	669
33.7.1 Second-Quantized Kinetic Theory	670
33.7.2 Non-Unitary Hamiltonians	671
33.8 Summary	673
References	673
Exercises	675
<b>34 Relativistic Lattice Boltzmann (RLB)</b>	<b>676</b>
34.1 Relativistic Mechanics	676
34.2 Relativistic Kinetic Theory	679
34.3 Relativistic Boltzmann Equation	681
34.4 Relativistic Equilibria: the Juettner Distribution	683
34.5 Relativistic Hydrodynamics	687
34.6 Relativistic LBE	688
34.7 Top-Down Approach: RLB by Moment Matching	689
34.7.1 Dissipative Hydrodynamics	690
34.8 Early RLB Applications	691

34.8.1	Shock Wave in Quark-Gluon Plasmas	691
34.8.2	Astrophysics: Supernova Explosions	692
34.8.3	Electron Flows in Graphene	693
34.9	Strongly Interacting Fluids, AdS-CFT Duality and Super-Universality	694
34.9.1	Caveat	696
34.10	Summary	696
	References	697
	Exercises	698
<b>35</b>	<b>Advanced RLB models</b>	<b>699</b>
35.1	Relativistic LBE from Relativistic Kinetic Theory	699
35.1.1	Relativistic Basis Functions	700
35.1.2	Relativistic Lattice Polynomials	701
35.1.3	Third-Order KRLB with Improved Dissipation	704
35.1.4	KRLB Equilibria	705
35.1.5	Kinetic RLB schemes for non-zero mass (finite-temperature) particles	705
35.2	Applications of Kinetic RLB	708
35.3	RLB in Spherical Coordinates	708
35.4	Lattice Boltzmann in Curved Manifolds	710
35.4.1	Hydrodynamics in Curved Manifolds	710
35.4.2	Kinetic Theory in Curved Manifolds	712
35.4.3	Lattice Boltzmann in a Curved Manifold	712
35.5	Future Developments: Fluid-Structure Interactions	714
35.6	General Relativity	715
35.6.1	LB for Numerical Relativity	716
35.6.2	Hybrid Scenarios for Numerical Relativity	717
35.6.3	Kinetic Theory of spacetime	717
35.7	Summary	717
35.8	Appendix: Covariant and Controvariant Coordinates	718
	References	720
	Exercises	721
<b>36</b>	<b>Coda</b>	<b>722</b>
36.1	The Question	722
36.1.1	Biblio-Numbers	722
36.1.2	LB Cannot Be Too Wrong	723
36.1.3	Breakthroughs	723
36.1.4	Weakly Broken Universality and Chimaera Simulation	724
36.2	Boltzmann and Computers	724
	References	726

<b>37</b>	<b>Notation</b>	<b>727</b>
37.1	Vectors and Tensors	727
37.2	Scalar Products and Tensor Contractions	728
37.3	Gradients, Divergence, Curl and All That	728
	Reference	729
	<b>Appendices</b>	<b>731</b>
A.1	The Pseudospectral Method	731
A.2	Computer Performance	732
A.2.1	Flops, MLUPS and Bytes per Flop	733
A.3	A Primer on Parallel Computing	734
A.3.1	Fraction of parallel content	734
A.3.2	Communication to computation	735
A.3.3	Load Balancing	737
A.3.4	Again on Thermal Barriers	737
A.4	From Lattice Units to Physical Units	737
A.4.1	Space	738
A.4.2	Time	738
A.4.3	Mass	739
	<b>Part VII Hands-On</b>	<b>741</b>
H.5	Routine List	741
H.5.1	Input	741
H.5.2	InitHydro	741
H.5.3	Equil	742
H.5.4	InitPop	742
H.5.5	Pbc	742
H.5.6	Mbc	742
H.5.7	Move	742
H.5.8	Hydrovar	742
H.5.9	Colli	742
H.5.10	Force	743
H.5.11	Obst	743
H.5.12	Diag0D	743
H.5.13	Movie	743
H.5.14	Profil	743
H.5.15	Config	743
H.6	Warm-up program	743
	<b>Index</b>	<b>757</b>
