Preface *xiii*

## Part I Overview and Motivation

<b>1</b>	<b>Introduction to Monte Carlo Methods</b>	<b>3</b>
<b>1.1</b>	Historical origin of Monte Carlo simulation	4
<b>1.2</b>	Monte Carlo simulation vs. Monte Carlo sampling	7
<b>1.3</b>	System dynamics and the mechanics of Monte Carlo simulation	10
<b>1.3.1</b>	Discrete-time models	10
<b>1.3.2</b>	Continuous-time models	13
<b>1.3.3</b>	Discrete-event models	16
<b>1.4</b>	Simulation and optimization	22
<b>1.4.1</b>	Nonconvex optimization	23
<b>1.4.2</b>	Stochastic optimization	26
<b>1.4.3</b>	Stochastic dynamic programming	28
<b>1.5</b>	Pitfalls in Monte Carlo simulation	30
<b>1.5.1</b>	Technical issues	31
<b>1.5.2</b>	Philosophical issues	33
<b>1.6</b>	Software tools for Monte Carlo simulation	35
<b>1.7</b>	Prerequisites	37
<b>1.7.1</b>	Mathematical background	37
<b>1.7.2</b>	Financial background	38
<b>1.7.3</b>	Technical background	38
For further reading		39
References		39

<b>2</b>	<b>Numerical Integration Methods</b>	<b>41</b>
<b>2.1</b>	Classical quadrature formulas	43
<b>2.1.1</b>	The rectangle rule	44
<b>2.1.2</b>	Interpolatory quadrature formulas	45
<b>2.1.3</b>	An alternative derivation	46
<b>2.2</b>	Gaussian quadrature	48
<b>2.2.1</b>	Theory of Gaussian quadrature: The role of orthogonal polynomials	49
<b>2.2.2</b>	Gaussian quadrature in R	51
<b>2.3</b>	Extension to higher dimensions: Product rules	53

<b>2.4</b>	Alternative approaches for high-dimensional integration	55
<b>2.4.1</b>	Monte Carlo integration	56
<b>2.4.2</b>	Low-discrepancy sequences	59
<b>2.4.3</b>	Lattice methods	61
<b>2.5</b>	Relationship with moment matching	67
<b>2.5.1</b>	Binomial lattices	67
<b>2.5.2</b>	Scenario generation in stochastic programming	69
<b>2.6</b>	Numerical integration in R	69

## Part II

### Input Analysis: Modeling and Estimation

<b>3</b>	Stochastic Modeling in Finance and Economics	75
<b>3.1</b>	Introductory examples	77
<b>3.1.1</b>	Single-period portfolio optimization and modeling returns	78
<b>3.1.2</b>	Consumption–saving with uncertain labor income	81
<b>3.1.3</b>	Continuous-time models for asset prices and interest rates	83
<b>3.2</b>	Some common probability distributions	86
<b>3.2.1</b>	Bernoulli, binomial, and geometric variables	88
<b>3.2.2</b>	Exponential and Poisson distributions	92
<b>3.2.3</b>	Normal and related distributions	98
<b>3.2.4</b>	Beta distribution	105
<b>3.2.5</b>	Gamma distribution	107
<b>3.2.6</b>	Empirical distributions	108
<b>3.3</b>	Multivariate distributions: Covariance and correlation	112
<b>3.3.1</b>	Multivariate distributions	113
<b>3.3.2</b>	Covariance and Pearson’s correlation	118
<b>3.3.3</b>	R functions for covariance and correlation	122
<b>3.3.4</b>	Some typical multivariate distributions	124
<b>3.4</b>	Modeling dependence with copulas	128
<b>3.4.1</b>	Kendall’s tau and Spearman’s rho	134
<b>3.4.2</b>	Tail dependence	136
<b>3.5</b>	Linear regression models: A probabilistic view	137
<b>3.6</b>	Time series models	138
<b>3.6.1</b>	Moving-average processes	142
<b>3.6.2</b>	Autoregressive processes	147
<b>3.6.3</b>	ARMA and ARIMA processes	151
<b>3.6.4</b>	Vector autoregressive models	155
<b>3.6.5</b>	Modeling stochastic volatility	157
<b>3.7</b>	Stochastic differential equations	159
<b>3.7.1</b>	From discrete to continuous time	160

<b>3.7.2</b>	Standard Wiener process	163
<b>3.7.3</b>	Stochastic integration and Itô's lemma	167
<b>3.7.4</b>	Geometric Brownian motion	173
<b>3.7.5</b>	Generalizations	176
<b>3.8</b>	Dimensionality reduction	178
<b>3.8.1</b>	Principal component analysis (PCA)	179
<b>3.8.2</b>	Factor models	189
<b>3.9</b>	Risk-neutral derivative pricing	192
<b>3.9.1</b>	Option pricing in the binomial model	193
<b>3.9.2</b>	A continuous-time model for option pricing: The Black–Scholes–Merton formula	196
<b>3.9.3</b>	Option pricing in incomplete markets	203
For further reading		205
References		206
<b>4</b>	<b>Estimation and Fitting</b>	209
<b>4.1</b>	Basic inferential statistics in R	211
<b>4.1.1</b>	Confidence intervals	211
<b>4.1.2</b>	Hypothesis testing	214
<b>4.1.3</b>	Correlation testing	218
<b>4.2</b>	Parameter estimation	219
<b>4.2.1</b>	Features of point estimators	221
<b>4.2.2</b>	The method of moments	222
<b>4.2.3</b>	The method of maximum likelihood	223
<b>4.2.4</b>	Distribution fitting in R	227
<b>4.3</b>	Checking the fit of hypothetical distributions	228
<b>4.3.1</b>	The chi-square test	229
<b>4.3.2</b>	The Kolmogorov–Smirnov test	231
<b>4.3.3</b>	Testing normality	232
<b>4.4</b>	Estimation of linear regression models by ordinary least squares	233
<b>4.5</b>	Fitting time series models	237
<b>4.6</b>	Subjective probability: The Bayesian view	239
<b>4.6.1</b>	Bayesian estimation	241
<b>4.6.2</b>	Bayesian learning and coin flipping	243
For further reading		248
References		249
<b>Part III</b>		
<b>Sampling and Path Generation</b>		
<b>5</b>	<b>Random Variate Generation</b>	253
<b>5.1</b>	The structure of a Monte Carlo simulation	254
<b>5.2</b>	Generating pseudorandom numbers	256
<b>5.2.1</b>	Linear congruential generators	256
<b>5.2.2</b>	Desirable properties of random number generators	260

<b>5.2.3</b>	General structure of random number generators	264
<b>5.2.4</b>	Random number generators in R	266
<b>5.3</b>	The inverse transform method	267
<b>5.4</b>	The acceptance–rejection method	269
<b>5.5</b>	Generating normal variates	276
<b>5.5.1</b>	Sampling the standard normal distribution	276
<b>5.5.2</b>	Sampling a multivariate normal distribution	278
<b>5.6</b>	Other ad hoc methods	282
<b>5.7</b>	Sampling from copulas	283
For further reading	286	
References	287	
<b>6</b>	<b>Sample Path Generation for Continuous-Time Models</b>	289
<b>6.1</b>	Issues in path generation	290
<b>6.1.1</b>	Euler vs. Milstein schemes	293
<b>6.1.2</b>	Predictor-corrector methods	295
<b>6.2</b>	Simulating geometric Brownian motion	297
<b>6.2.1</b>	An application: Pricing a vanilla call option	299
<b>6.2.2</b>	Multidimensional GBM	301
<b>6.2.3</b>	The Brownian bridge	304
<b>6.3</b>	Sample paths of short-term interest rates	308
<b>6.3.1</b>	The Vasicek short-rate model	310
<b>6.3.2</b>	The Cox–Ingersoll–Ross short-rate model	312
<b>6.4</b>	Dealing with stochastic volatility	315
<b>6.5</b>	Dealing with jumps	316
For further reading	319	
References	320	
<b>Part IV</b>		
	<b>Output Analysis and Efficiency Improvement</b>	
<b>7</b>	<b>Output Analysis</b>	325
<b>7.1</b>	Pitfalls in output analysis	327
<b>7.1.1</b>	Bias and dependence issues: A financial example	330
<b>7.2</b>	Setting the number of replications	334
<b>7.3</b>	A world beyond averages	335
<b>7.4</b>	Good and bad news	337
For further reading	338	
References	338	
<b>8</b>	<b>Variance Reduction Methods</b>	341
<b>8.1</b>	Antithetic sampling	342
<b>8.2</b>	Common random numbers	348
<b>8.3</b>	Control variates	349
<b>8.4</b>	Conditional Monte Carlo	353

---

<b>8.5</b>	Stratified sampling	357
<b>8.6</b>	Importance sampling	364
<b>8.6.1</b>	Importance sampling and rare events	370
<b>8.6.2</b>	A digression: Moment and cumulant generating functions	373
<b>8.6.3</b>	Exponential tilting	374
For further reading		376
References		377
<b>9</b>	<b>Low-Discrepancy Sequences</b>	379
<b>9.1</b>	Low-discrepancy sequences	380
<b>9.2</b>	Halton sequences	382
<b>9.3</b>	Sobol low-discrepancy sequences	387
<b>9.3.1</b>	Sobol sequences and the algebra of polynomials	389
<b>9.4</b>	Randomized and scrambled low-discrepancy sequences	393
<b>9.5</b>	Sample path generation with low-discrepancy sequences	395
For further reading		399
References		400

## Part V Miscellaneous Applications

<b>10</b>	<b>Optimization</b>	405
<b>10.1</b>	Classification of optimization problems	407
<b>10.2</b>	Optimization model building	421
<b>10.2.1</b>	Mean-variance portfolio optimization	421
<b>10.2.2</b>	Modeling with logical decision variables: Optimal portfolio tracking	422
<b>10.2.3</b>	A scenario-based model for the newsvendor problem	425
<b>10.2.4</b>	Fixed-mix asset allocation	426
<b>10.2.5</b>	Asset pricing	427
<b>10.2.6</b>	Parameter estimation and model calibration	430
<b>10.3</b>	Monte Carlo methods for global optimization	432
<b>10.3.1</b>	Local search and other metaheuristics	433
<b>10.3.2</b>	Simulated annealing	435
<b>10.3.3</b>	Genetic algorithms	439
<b>10.3.4</b>	Particle swarm optimization	441
<b>10.4</b>	Direct search and simulation-based optimization methods	444
<b>10.4.1</b>	Simplex search	445
<b>10.4.2</b>	Metamodeling	446
<b>10.5</b>	Stochastic programming models	448
<b>10.5.1</b>	Two-stage stochastic linear programming with recourse	448
<b>10.5.2</b>	A multistage model for portfolio management	452
<b>10.5.3</b>	Scenario generation and stability in stochastic programming	457
<b>10.6</b>	Stochastic dynamic programming	469

<b>10.6.1</b>	The shortest path problem	470
<b>10.6.2</b>	The functional equation of dynamic programming	473
<b>10.6.3</b>	Infinite-horizon stochastic optimization	477
<b>10.6.4</b>	Stochastic programming with recourse vs. dynamic programming	478
<b>10.7</b>	Numerical dynamic programming	480
<b>10.7.1</b>	Approximating the value function: A deterministic example	480
<b>10.7.2</b>	Value iteration for infinite-horizon problems	484
<b>10.7.3</b>	A numerical approach to consumption-saving	493
<b>10.8</b>	Approximate dynamic programming	506
<b>10.8.1</b>	A basic version of ADP	507
<b>10.8.2</b>	Post-decision state variables in ADP	510
<b>10.8.3</b>	<i>Q</i> -learning for a simple MDP	513
For further reading		519
