Preface	vii
Chapter 1. The Laplace operator on graphs	1
1.1. The notion of a graph	1
1.2. Cayley graphs	5
1.3. Random walks	8
1.4. The Laplace operator	19
1.5. The Dirichlet problem	22
Chapter 2. Spectral properties of the Laplace operator	27
2.1. Green's formula	27
2.2. Eigenvalues of the Laplace operator	28
2.3. Convergence to equilibrium	34
2.4. More about the eigenvalues	39
2.5. Convergence to equilibrium for bipartite graphs	42
2.6. Eigenvalues of \mathbb{Z}_m	43
2.7. Products of graphs	45
2.8. Eigenvalues and mixing time in \mathbb{Z}_m^n , m odd.	49
2.9. Eigenvalues and mixing time in a binary cube	51
Chapter 3. Geometric bounds for the eigenvalues	53
3.1. Cheeger's inequality	53
3.2. Eigenvalues on a path graph	58
3.3. Estimating λ_1 via diameter	61
3.4. Expansion rate	63
Chapter 4. Eigenvalues on infinite graphs	73
4.1. Dirichlet Laplace operator	73
4.2. Cheeger's inequality	76
4.3. Isoperimetric and Faber-Krahn inequalities	78
4.4. Estimating $\lambda_1(\Omega)$ via inradius	79
4.5. Isoperimetric inequalities on Cayley graphs	82
4.6. Solving the Dirichlet problem by iterations	86
Chapter 5. Estimates of the heat kernel	89
5.1. The notion and basic properties of the heat kernel	89
5.2. One-dimensional simple random walk	91
5.3. Carne-Varopoulos estimate	96
5.4. On-diagonal upper estimates of the heat kernel	99
5.5. On-diagonal lower bound via the Dirichlet eigenvalues	107
5.6. On-diagonal lower bound via volume growth	112

5.7. Escape rate of random walk	114
Chapter 6. The type problem	117
6.1. Recurrence and transience	117
6.2. Recurrence and transience on Cayley graphs	122
6.3. Volume tests for recurrence	123
6.4. Isoperimetric tests for transience	128
Chapter 7. Exercises	131
Bibliography	143
Index	149
