

Contents

Part I

Approach and Tools

1. The Scientific Approach	3
1.1 Knowledge: Ordinary and Scientific	3
1.2. Scientific Method	8
1.3. Scientific Tactics	14
1.4. Branches of Science.	21
1.5. Goal and Scope of Science.	25
1.6. Pseudoscience	36
Bibliography	44
2. Concept	46
2.1. Scientific Languages	46
2.2. Term and Concept	56
2.3. Extension and Intension	65
2.4. Partition, Ordering and Systematics	74
2.5. From Pretheoretical to Theoretical Systematics	82
2.6. Systematics of Concepts	89
Bibliography	95
3. Elucidation	97
3.1. Vagueness and Borderline Cases	97
3.2. Sharpening	107
3.3. Definition	117
3.4. *Problems of Definition	129
3.5. Interpretation	139
3.6. Interpretation Procedures	146
3.7. Concept "Validity"	155
Bibliography	162

Part II

Scientific Ideas

4. Problem	165
4.1. The Spring of Science	165
4.2. *Logic of Problems	170
4.3. Scientific Problems	183
4.4. A Paradigm, a Framework, and a Simile	192
4.5. Heuristics	199
4.6. The End of Scientific Problems	205
4.7. Philosophical Problems	214
Bibliography	221
5. Hypothesis	222
5.1. Meanings	222
5.2. Formulation	228
5.3. *Kinds: Form and Content	237

5.4. Kinds: Epistemological Viewpoint	243
5.5. Ground	253
5.6. Testability	261
5.7. *Requirements	272
5.8. Functions	280
5.9. Philosophical Hypotheses in Science	291
Bibliography	304
6. Law	305
6.1. Variables and Invariants	305
6.2. Searching for Law	314
6.3. Kinds	325
6.4. Form and Content	334
6.5. Law Formula and Pattern	343
6.6. Requirements	354
6.7. *Laws of Laws	363
6.8. The Rule of Law	370
Bibliography	379
7. Theory: Statics	380
7.1. The Nervous System of Science	380
7.2. Conceptual Unity	391
7.3. Deducibility	400
7.4. Abstract Theory and Interpretation	413
7.5. *Probability: Calculus, Models, Misinterpretations	423
7.6. Formal Desiderata	436
Bibliography	447
8. Theory: Dynamics	449
8.1. Theory Construction	449
8.2. Mathematization	466
8.3. *Reconstruction (Formalization)	482
8.4. Reference and Evidence	493
8.5. Depth	506
Bibliography	518
Author Index	520
Subject Index	525
