

Table of Contents

1	Introduction	1
2	Euclidean plane	11
2.1	Classical definitions	12
2.2	Tangent lines of conics	30
2.3	Mechanisms tracing conics	53
3	Differential Geometry	61
3.1	Conics as orbits of planets	62
3.2	Conics in planar differential geometry	77
3.3	Conics in differential geometry of surfaces	120
4	Euclidean 3-space	127
4.1	Planar intersections of cones of revolution	128
4.2	Pairs of focal conics, Dupin cyclides	137
4.3	Perspective images of conics	153
4.4	Spatial interpretation of conic constructions	162
5	Projective Geometry	177
5.1	Projective planes	178
5.2	Perspectivities, projectivities	188
5.3	Coordinatization	194
5.4	Harmonic quadruples	206
6	Projective conics	217
6.1	Steiner's definition of a conic	218
6.2	Pascal, Pappus, Brianchon	220
6.3	Equation and parametrization of a conic	228
6.4	There is only one conic in a projective plane	239
7	Polarities and pencils	259
7.1	Polar system of a conic	260
7.2	Definition of a conic according to von Staudt	276
7.3	Pencils of conics	283
7.4	DESARGUES's involution theorem	309
7.5	Quadratic Cremona transformations	329

8	Affine Geometry	351
8.1	Conjugate diameters of ellipses and hyperbolas	353
8.2	Conics are rational quadratic Bézier curves	365
8.3	Conics and number theory	369
9	Special problems	375
9.1	Conics in triangle geometry	376
9.2	Isoptic curves of conics	394
9.3	Pedal points on conics, Apollonian hyperbola	402
9.4	Pedal curves of conics	406
9.5	Poncelet porisms	412
10	Other geometries	435
10.1	Spherical conics	436
10.2	Conics in non-Euclidean planes	468
	References	480
	Index	483
