## **Table of Contents**

1	Intr	oduction	1	
2	Euc	lidean plane	11	
	2.1	Classical definitions	12	
	2.2	Tangent lines of conics	30	
	2.3	Mechanisms tracing conics	53	
3	Differential Geometry			
	3.1	Conics as orbits of planets	62	
	3.2	Conics in planar differential geometry	77	
	3.3	Conics in differential geometry of surfaces	120	
4	Euc	lidean 3-space	127	
	4.1	Planar intersections of cones of revolution	128	
	4.2	Pairs of focal conics, Dupin cyclides	137	
	4.3	Perspective images of conics	153	
	4.4	Spatial interpretation of conic constructions	162	
5	Projective Geometry			
	5.1	Projective planes	178	
	5.2	Perspectivities, projectivities	188	
	5.3	Coordinatization		
	5.4	Harmonic quadruples	206	
6	Projective conics			
	6.1	Steiner's definition of a conic		
	6.2	Pascal, Pappus, Brianchon	<b>22</b> 0	
	6.3	Equation and parametrization of a conic	228	
	6.4	There is only one conic in a projective plane	239	
7	Polarities and pencils			
	7.1	Polar system of a conic	260	
	7.2	Definition of a conic according to von Staudt		
	7.3	Pencils of conics		
	7.4	DESARGUES's involution theorem	309	
	7.5	Quadratic Cremona transformations	329	

8	Affine Geometry		351		
	8.1	Conjugate diameters of ellipses and hyperbolas	353		
	8.2	Conics are rational quadratic Bézier curves			
	8.3	Conics and number theory			
9	Special problems				
	9.1	Conics in triangle geometry	376		
	9.2	Isoptic curves of conics			
	9.3	Pedal points on conics, Apollonian hyperbola	402		
	9.4 9.5	Pedal curves of conics			
10	Other geometries		435		
	10.1	Spherical conics	436		
	10.2	Conics in non-Euclidean planes	468
