

Handbook of Microscopy

Applications in Materials Science,
Solid-State Physics and Chemistry

Edited by

S. Amelinckx, D. van Dyck,

J. van Landuyt, G. van Tendeloo

Applications

Weinheim · New York · Basel · Cambridge · Tokyo

Contents

Volume 3: Applications

General Introduction 1

I Classes of Materials

1 Metals and Alloys 5

J.Th.M. De Hosson

1.1 Imaging Metals and Alloys: Introduction 5

1.2 Apparatus and Techniques for Imaging Metallic Systems 8

1.3 Metallic Specimen Preparation for Transmission Electron
Microscopy 12

1.3.1 Electrochemical Thinning 12

1.3.2 Ion Milling 13

1.4 Typical Examples 14

1.4.1 Observations of Static Dislocations by Transmission Electron
Microscopy 14

1.4.1.1 Atomic Peening 15

1.4.1.2 Stress Fields in the Implanted Layer 18

1.4.1.3 Micro-Preening 22

1.4.2 Dynamic Transmission Electron Microscopy Observations:
In-Situ Deformation 40

1.4.2.1 Grain Boundary Structures 42

1.4.2.2 TEM Holder for Straining at Temperature 47

1.4.2.3 In-situ Deformation Results 49

1.4.3 High-Resolution Transmission Electron Microscopy 71

1.5 Imaging Metals and Alloys: Conclusions 77

1.6 Imaging Phase Transformations in Metals and Alloys 80

G. van Tendeloo, D. Schryvers

1.6.1 General Introduction 80

1.6.2 Diffusive Phase Transformations in Alloys 81

1.6.2.1 Long Range Ordered Alloys 84

1.6.2.2 Short Range Order and Initial Stages of Ordering in
D1a-Type Alloys 86

1.6.2.3 Interface Wetting in Ordered Alloys 89

- 1.6.3 Displacive Transformations in Metals and Alloys 92
- 1.6.3.1 Microstructures 92
- 1.6.3.2 Internal and Atomic Structure 94
- 1.6.3.3 Interfaces, Defects and Precipitates 96
- 1.6.3.4 Precursor Phenomena 97
- 1.6.3.5 Nucleation and Transformation Characteristics 99
- 1.6.4 Some Other Transformations in Alloys 100
- 1.6.5 Imaging Phase Transformations: Conclusions 103
- 1.7 References 104

2 Microscopy of Rocks and Minerals 111

D.J. Barber

- 2.1 Introduction 111
- 2.2 Optical Microscopy, Petrology, and Other Optical Methods 111
- 2.2.1 Transmitted Light Microscopy and Petrology 111
- 2.2.2 Reflected Light Microscopy and Opaque Minerals 114
- 2.2.3 Infrared Micro-spectroscopy, Laser Raman Microprobe and Micro-Raman Imaging 114
- 2.2.3.1 Phase Identification 114
- 2.2.3.2 Fluid Inclusions 115
- 2.2.4 Confocal Scanning Laser Microscopy 116
- 2.2.5 Ultraviolet Fluorescence Optical Microscopy 116
- 2.3 X-Ray Methods 117
- 2.3.1 Computer-Aided Tomography 117
- 2.3.2 X-Ray Microtopography 117
- 2.4 Scanning Acoustic Microscopy 118
- 2.5 Cathodoluminescence Microscopy 118
- 2.6 Scanning Electron Microscopy 120
- 2.6.1 General Uses 120
- 2.6.2 Electron Channeling Patterns 123
- 2.6.3 Electron Backscattering Patterns 123
- 2.6.4 Microanalysis by Scanning Electron Microscopy and Electron Probe Microanalysis 124
- 2.7 Transmission Electron Microscopy 125
- 2.7.1 General Uses 125
- 2.7.2 Exsolution, Microstructures, Transformations, and Atomic Structures 127
- 2.7.3 Phyllosilicates 129
- 2.7.4 Deformation Mechanisms in Minerals and Rocks 131
- 2.8 Electron Microscopy of Extraterrestrial Minerals and Rocks 133

2.9	Electron Microscopy of Biogenic Minerals	135
2.10	Auger Electron Spectroscopy (AES) and X-Ray Photoelectron Spectroscopy (XPS)	136
2.11	Ion Microprobe Analysis and Ion Microscopy	137
2.12	The Scanning Proton Microprobe and Micro-Proton-Induced X-Ray Emission Spectroscopy	137
2.13	Scanning Tunneling Microscopy and Atomic Force Microscopy	139
2.14	References	140
3	Semiconductors and Semiconducting Devices	145
	<i>H. Oppolzer, H. Cerva</i>	
3.1	Introduction	145
3.2	Semiconductor Bulk Material	148
3.2.1	Silicon for Device Fabrication	148
3.2.2	Compound Semiconductors	151
3.3	Silicon Technology Processes	153
3.3.1	Dielectric Layers	153
3.3.2	Polysilicon and Metallizations	158
3.3.2.1	Polysilicon	159
3.3.2.2	Refractory Metal Silicides	161
3.3.2.3	Aluminium Metallization	164
3.3.3	Lithography and Etching	167
3.3.4	Doping	169
3.3.5	Process-Induced Defects	174
3.3.5.1	Thermal Stresses	175
3.3.5.2	Metal Precipitates	175
3.3.5.3	Stress Fields Induced by Film Edges and Silicon Trenches	176
3.3.5.4	Damage Produced by Ion Implantation and Reactive Ion Etching	177
3.4	Silicon Device Structure	180
3.4.1	In-Line Wafer Assessment by Scanning Electron Microscopy	180
3.4.2	Failure Analysis	183
3.4.2.1	Localization of Failure Sites	183
3.4.2.2	Physical Failure Analysis	185
3.5	Compound Semiconductor Devices	190
3.5.1	Heteroepitaxial Layer Structures	190
3.5.1.1	{200} Dark Field Imaging of Thin Cross-sections	191
3.5.1.2	Imaging of Cleaved Wedge Specimens	193
3.5.1.3	High-Resolution Imaging	195
3.5.1.4	High-Resolution Chemical Analysis	197

3.5.2	Electronic Gallium Arsenide Device Structures	198
3.6	References	202

4 Optoelectronic Materials 207

I. Berbezier, J. Derrien

4.1	Introduction	207
4.2	Materials for Optoelectronic Devices	209
4.2.1	Luminescent Materials	209
4.2.2	Photoconducting Materials	210
4.3	Microscopic Techniques	212
4.3.1	Epitaxial Relationships	212
4.3.2	Strain in the Heterolayer	213
4.3.3	Dopant and Impurity Volume Distribution	214
4.3.4	Morphological Characterization	215
4.3.5	Recombination Centers	216
4.4	Applications to Optoelectronic Materials	217
4.4.1	Applications to III–V Compounds	217
4.4.2	Applications to Si Based Compounds	220
4.4.2.1	Luminescent Porous Silicon	221
4.4.2.2	Si _{1-x} Ge _x /Si Strained Superlattice Structure	225
4.4.2.3	FeSi ₂ /Si Interface	227
4.4.3	Applications to II–VI Compounds	230
4.5	Conclusion	231
4.6	References	232

5 Domain Structures in Ferroic Materials 235

E. K. H. Salje

5.1	Ferroic Phase Transitions	235
5.2	Ferroelastic Phase Transitions	235
5.3	Wall Energies and Wall Profiles	241
5.4	The Internal Structure of Twin Walls	243
5.5	Bending of Domain Walls and the Compatibility Relationship	243
5.6	Wall–Wall Interactions in Ferroelastic Materials	246
5.7	Tweed Microstructures as the Result of Kinetic Processes at $T < T_c$	247
5.8	Ferroelectric Domains	250
5.9	References	251

6	Microscopy of Structural Ceramics	253

6.1	Introduction	253
6.2	Different Imaging Techniques	254
6.2.1	Remarks on Specimen Preparation	254
6.2.2	Optical Microscopy	255
6.2.3	Microstructural Studies with the Scanning Electron Microscope (SEM)	255
6.2.4	Microstructural Studies with a Scanning Tunneling Microscope (STM) and an Atomic Force Microscope (AFM)	255
6.2.5	Microstructural Studies a Transmission Electron Microscope (TEM)	256
6.3	Essential Microstructural Aspects of Structural Ceramics	256
6.4	Studies on Alumina (Al_2O_3)	257
6.4.1	Fundamentals of Alumina	257
6.4.1.1	Crystallography	257
6.4.1.2	Sintering and Application of α -Alumina	258
6.4.2	Microscopy of α -Alumina	259
6.4.2.1	Determination of Grain Size and Grain Size Distribution	259
6.4.2.2	Structure of Undoped Grain Boundaries in α -Alumina	262
6.4.2.3	Studies of Segregated Grain Boundaries	263
6.4.2.4	Grain Boundary Films	264
6.5	Studies on Zirconia (ZrO_2)	264
6.5.1	Phase Transformations of Zirconia Ceramics	265
6.5.2	Microscopy of the Phase Transformation in Zirconia Ceramics	268
6.5.3	In Situ Observation of the $t \rightarrow m$ Transformation in Zirconia	271
6.5.4	Microscopical Studies of Microcrack Toughening	273
6.5.5	Microscopy of Ferroelastic t' -Zirconia	275
6.5.6	Plastic Deformation of Zirconia Ceramics	275
6.6	Studies on Silicon Nitride (Si_3N_4)	277
6.6.1	Nucleation and Growth	277
6.6.2	The Grain Boundary Film Thickness	278
6.6.3	Dependence of the Film Thickness on the Intergranular-Phase Chemistry	279
6.6.4	A Model System: Low Calcium-Doped Amorphous Silica (SiO_2) Films in Silicon Nitride	280
6.6.5	Interpretation of the Experimental Results	281
6.6.6	Concluding Remarks	282
6.7	Studies on Composites	282
6.7.1	Al/ Al_2O_3 Composites (Lanxide Material)	283

6.7.2	Al/Al ₂ O ₃ Composites (Processed by Infiltration)	284
6.7.3	Fiber/Whisker Reinforcement	288
6.8	References	289
7	Microscopy of Gemmological Materials	293

II Special Topics

- 1 Small Particles 691**
H. W. Zandbergen, C. Træholt
- 1.1 Introduction 691
 - 1.2 Characterization Methods 691
 - 1.2.1 Use of Scanning Electron Microscopy, Transmission Electron Microscopy and Scanning Probe Microscopy 691
 - 1.2.1.1 Scanning Electron Microscopy 694
 - 1.2.1.2 Transmission Electron Microscopy 695
 - 1.2.1.3 Scanning Transmission Electron Microscopy 697
 - 1.2.1.4 Scanning Probe Microscopy 697
 - 1.2.2 Other Characterization Methods 699
 - 1.3 Small-Particle Materials 699

- 1.3.1 Catalysts 699
- 1.3.2 Nanophase Materials 703
- 1.3.3 Precipitates 706
- 1.3.4 Magnetic Materials 707
- 1.4 Required Characterizations 708
 - 1.4.1 Size and Shape of the Particles 708
 - 1.4.2 Structure of the Particles 709
 - 1.4.2.1 Comparison of Transmission Electron Microscopy with X-Ray or Neutron Diffraction 709
 - 1.4.2.2 Use of the Electron Microscope 711
 - 1.4.3 Composition (Overall) of Particles 712
 - 1.4.4 Structure of the Surface 714
 - 1.4.4.1 Polarity of the Surface 714
 - 1.4.4.2 Imaging Surface Relaxation by Transmission Electron Microscopy Profile Imaging 714
 - 1.4.4.3 Can One Detect Ad-Atoms? 714
 - 1.4.5 Composition of Particle Surfaces 715
 - 1.4.6 Structure of Grain Boundaries and Orientation Relationships of Adjacent Grains 716
 - 1.4.7 Composition of Particle Grain Boundaries 717
 - 1.4.8 Ageing 717
- 1.5 Detailed Structure Imaging 717
 - 1.5.1 Delocalization of Information 717
 - 1.5.2 Image Calculations 718
 - 1.5.3 Averaging of Images 720
- 1.6 Beam-Induced Phenomena 720
 - 1.6.1 Changes in Orientation of Particles and Particle Drifts 722
 - 1.6.2 Charging of Particles 723
 - 1.6.3 Contamination 723
 - 1.6.4 Amorphization 723
 - 1.6.5 Reduction of Surfaces 724
- 1.7 Typical Characterization Problems Related to Small Size 725
 - 1.7.1 Effect of Substrate 725
 - 1.7.2 Inhomogeneous Distribution of Small Particles 725
 - 1.7.3 Collection of Small Particles which are Finely Dispersed in a Fluid or Air 726
 - 1.7.4 Various Special Applications 726
- 1.8 Specimen Preparation Related Topics 727
 - 1.8.1 Preparation of Specimens and Supports 727
 - 1.8.2 Passivation of Small Metal Particles 728
 - 1.8.3 Preparation of Holey Films and Very Thin (2 nm) Carbon Foils 728

- 1.8.4 Stability of Holey Films and Other Supports on (ex situ or in situ) Heating 729
- 1.8.5 In situ Transmission Electron Microscopy 730
- 1.8.5.1 An Environmental Cell 730
- 1.8.5.2 Specimen Handling and Specimen Transfer in a Controlled Atmosphere 730
- 1.8.6 Specimen Transfer under Protective Atmospheres 731
- 1.8.7 Surface Clean Specimens 732
- 1.9 References 733

- 2 Structural Phase Transformations 739**
H. Warlimont
- 2.1 Introduction 739
- 2.2 Phase Transitions and Structural Phase Transformations 739
- 2.3 Recent Advances 740
- 2.4 In Situ Observations 741
- 2.5 Investigation of Pretreated Samples 746
- 2.6 Concluding Remarks 749
- 2.7 References 750

- 3 Preparation Techniques for Transmission Electron Microscopy 751**
A. Barna, G. Radnóczy, B. Pécz
- 3.1 Indirect Investigation of Materials 751
- 3.1.1 Surface Investigation in Transmission Electron Microscopy: Replica Techniques 751
- 3.1.1.1 Preparation of Single-Stage Replicas 751
- 3.1.1.2 Preparation of Two-Stage Replicas 753
- 3.1.1.3 Preparation of Covering (Diffuse) Replicas 754
- 3.1.1.4 Preparation of Extraction Replicas 756
- 3.1.2 Decoration Technique 757
- 3.2 Direct Investigation of Materials 757
- 3.2.1 Investigation of Thin Films: Effect of the Substrate Material 757
- 3.2.1.1 Preparation of Thin-Film Substrates 758
- 3.2.1.2 Preparation of Cleaved-Substrate Single Crystals 759
- 3.2.1.3 Preparation of Thin Films on Bulk Substrates 759
- 3.2.2 Investigation of Dust Particles 759
- 3.2.3 Chemical and Electrochemical Methods 760
- 3.2.4 Ultramicrotomy 766

- 3.2.5 Sample Preparation from Bulk Material by the Cleavage Technique 766
- 3.2.6 Artifacts by Conventional Preparation Techniques 768
- 3.3 Ion Beam Preparation 769
- 3.3.1 Practical Geometric Theory of Ion Beam Erosion: Possibility of Surface Polishing 769
 - 3.3.1.1 The Geometrical Model of Surface Topography 770
 - 3.3.1.2 Rotating Sample 771
 - 3.3.1.3 Experimental Results for a Rotating Sample 773
 - 3.3.1.4 Rocked Sample Movement 774
 - 3.3.1.5 Preferential Sputtering 775
 - 3.3.1.6 Retarding Field 776
- 3.3.2 Tools and Parts for Sample Preparation for Ion Beam Thinning 776
- 3.3.3 Arrangement of Ion Milling on the Basis of Geometric Theory 780
- 3.3.4 Ion Beam Sample Preparation for Lateral Transmission Electron Microscopy (TEM) and Cross-Sectional TEM 781
- 3.3.5 Artifacts Due to Ion Beam Milling 788
- 3.3.6 Sample Temperature during Sputtering: Application of Cooling Stages 790
- 3.3.7 Reactive Ion Beam Thinning 793
- 3.3.8 Ion Beam Slope Cutting (Cross-Sectional Sample Preparation) for Scanning Electron Microscopy 795
- 3.3.9 Focused Ion Beam Sample Preparation for Transmission Electron Microscopy 796
- 3.3.10 Ion Beam Polishing for Scanning Tunneling Microscopy 797
- 3.4 References 798

4 Environmental Problems 803

W. Jambers, R. E. Van Grieken

- 4.1 Introduction 803
- 4.2 Scanning Microanalysis 804
 - 4.2.1 Automation 804
 - 4.2.2 Applications to Aerosols 804
 - 4.2.3 Applications to Suspensions and Sediments 810
- 4.3 Scanning Transmission Electron Microscopy 813
- 4.4 Electron Energy-Loss Spectrometry 815
- 4.5 Micro-Raman Spectrometry 816
- 4.6 Fourier Transform Infrared Spectrometry 817
- 4.7 References 817

5	Quantitative Hyleography: The Determination of Quantitative Data from Micrographs	821
	<i>P. J. Goodhew</i>	
5.1	Hyleography, the Imaging of Materials	821
5.2	The Need for Quantification	821
5.3	Instrument Calibration	822
5.3.1	Calibration of Microscopes	822
5.3.2	Calibration of Spectrometers	823
5.4	Sample Type	823
5.4.1	Sampling	824
5.4.2	Image Projection	826
5.5	Data Recording	826
5.5.1	Light Microscopy	826
5.5.2	Scanning Electron Microscopy	827
5.5.3	Transmission Electron Microscopy	827
5.5.4	Electron Microprobe Analysis	828
5.5.5	Scanned Probe Techniques	829
5.5.6	Other Techniques	829
5.6	Ultimate Sensitivity and its Significance	830
5.7	Case Studies	831
5.7.1	Cavity Size Distributions in Irradiated Metals	831
5.7.2	Dislocation Spacing Distributions in Semiconductor Interfaces	832
5.8	References	833
