

1	Introduction	1
2	State of the Art.....	2
2.1	Aluminium Production Chain.....	2
2.2	Aluminium Products with High Purity.....	3
2.3	The Main Destructive Inclusions in Aluminium Melts	5
2.3.1	Oxides.....	5
2.3.2	Carbides.....	6
2.3.3	Borides.....	8
2.3.4	Nitrides	9
2.4	Mobility of Non-metallic Particles in Molten Phases	9
2.4.1	Settling Behaviour of Particles in Melts and its Mathematical Description	11
2.4.2	Particle Agglomeration and Cluster Break-up Phenomena	19
2.5	Inclusion Removal Methods.....	25
2.5.1	Flotation	25
2.5.2	Filtration	27
2.5.3	Sedimentation	31
2.6	Characterization and Detection Methods of Inclusions in Aluminium Melts	33
2.6.1	LiMCA	34
2.6.2	PoDFA.....	37
2.6.3	Other Methods.....	40
3	Modelling of Inclusion and Melt Movement	42
3.1	Analytical Description of Melt Flow based on Temperature Measurements and Numerical Simulation Results.....	42
3.1.1	Experimental and Analytical Procedure.....	42
3.1.2	Results and Discussion	43
3.2	Analytical Description of Particle Settling in Aluminium Melts.....	45

3.3	Settling Tests of Ceramic Particles in Water	52
3.3.1	Experimental Work.....	52
3.3.2	Results and Discussion	53
3.4	Conclusions of the Settling Tests in Water	54
4	Particle Settling and Agglomeration in Molten Aluminium.....	55
4.1	Preparation of Aluminium Matrix Composites with Defined Inclusion Types	55
4.1.1	Experimental Results of MMC Preparation.....	57
4.1.2	Conclusions of MMC Preparation Experiments	59
4.2	Sedimentation Experiments.....	60
4.2.1	Experimental Lay-out and Procedure.....	60
4.2.2	Experimental Results and Discussion of Sedimentation Trials	62
4.2.3	Conclusions of Sedimentation Experiments	82
4.3	Agglomeration Experiments	84
4.3.1	Experimental Lay-out and Procedure.....	84
4.3.2	Experimental Results and Discussion of Agglomeration Experiments	85
4.3.3	Conclusion of Agglomeration Experiments.....	90
5	Scientific Assessment	91
	Sedimentation model of the demo-scale crucible furnace	92
6	Conclusions and Future Prospective.....	94
7	Attachments.....	97
