

Contents

1. Introduction to Chemical Kinetics	1
1.1 The Field of Chemical Kinetics	1
<i>Time as a Variable</i>	1
<i>Uses of Chemical Kinetics</i>	2
<i>Literature of the Field</i>	2
1.2 The Study of Reaction Mechanisms	3
<i>The Definition of Reaction Mechanism</i>	3
<i>Methods for Studying Mechanisms</i>	6
<i>The Role of Kinetics</i>	7
<i>Classification of Mechanisms</i>	8
1.3 Experimental Chemical Kinetics	10
<i>The Rate of Reaction</i>	10
<i>Rate Equations and Stoichiometric Equations</i>	11
<i>Rate Constants and Reaction Orders</i>	13
<i>Temperature Dependence of Rate Constants</i>	13
2. Simple Rate Equations	17
2.1 Integrated Rate Equations	17
<i>Zero-Order Reactions</i>	17
<i>First-Order Reactions</i>	18
<i>Second-Order Reactions</i>	20
<i>Pseudo-Order Reactions</i>	23
2.2 Determination of Reaction Order	24
<i>Use of Integrated Equations</i>	24
<i>The Isolation and Pseudo-Order Techniques</i>	26
<i>Initial Rate Method</i>	28
<i>Fractional Time Methods</i>	29
2.3 Methods of Data Analysis	31
<i>Calculation of the Rate Constant from Concentrations</i>	31
<i>Treatment of Instrument Response Data</i>	34
<i>Methods When the Final Value is Unknown</i>	36
<i>Propagation of Errors</i>	40

	<i>Linear Least-Squares Regression</i>	41	
	<i>Weighting in Least-Squares Regression</i>	44	
	<i>Weighting and the Transformation of Variables</i>	45	
	<i>Variances of the Parameters</i>	46	
	<i>Nonlinear Least-Squares Regression</i>	49	
	<i>Accuracy in Rate Constant Measurements</i>	51	
3.	Complicated Rate Equations		59
3.1	Integration of the Rate Equations		60
	<i>Reversible Reactions</i>	60	
	<i>Parallel Reactions</i>	62	
	<i>Consecutive Reactions</i>	66	
3.2	Other Methods of Analysis		77
	<i>Measurement of Rates</i>	77	
	<i>Simplification of the Experimental Kinetics</i>	78	
	<i>Elimination of the Time Variable</i>	79	
	<i>Replacement of Time with an Area Variable</i>	81	
	<i>The Laplace Transformation</i>	82	
	<i>Secular Equations and Eigenvalues</i>	90	
	<i>The Preequilibrium Assumption</i>	96	
	<i>The Steady-State Approximation</i>	100	
	<i>Numerical Integration</i>	105	
	<i>Monte Carlo Simulation</i>	109	
	<i>Analog Simulation</i>	114	
3.3	The Kinetic Scheme		115
	<i>Model Building</i>	115	
	<i>Kinetic Equivalence of Rate Terms</i>	123	
	<i>Microscopic Reversibility and Detailed Balance</i>	125	
4.	Fast Reactions		133
4.1	Diffusion-Controlled Reactions		134
4.2	Relaxation Kinetics		136
	<i>Linearization of Rate Equations</i>	137	
	<i>Complex Reactions</i>	139	
	<i>Experimental Methods</i>	143	
	<i>Applications</i>	146	
4.3	Nuclear Magnetic Resonance Spectroscopy		153
	<i>Magnetic Properties of Nuclei</i>	153	

	<i>The Resonance Condition</i>	155	
	<i>Spin-Lattice Relaxation</i>	157	
	<i>Spin-Spin Relaxation</i>	159	
	<i>The Bloch Equations</i>	160	
	<i>T₁, T₂, and the Correlation Time</i>	164	
	<i>Chemical Exchange</i>	166	
	<i>Pulse NMR Measurements</i>	170	
	<i>Applications</i>	173	
4.4	Rapid Mixing Methods		176
	<i>Batch Methods</i>	176	
	<i>Flow Methods</i>	177	
4.5	Other Methods		180
	<i>Fluorescence Quenching</i>	180	
	<i>Electrochemical Methods</i>	181	
	<i>Common Ion Inhibition</i>	183	
5.	Theory of Chemical Kinetics		187
5.1	Theoretical Approaches		187
	<i>The Arrhenius Equation</i>	187	
	<i>Collision Theory</i>	188	
	<i>Potential Energy Surfaces</i>	191	
5.2	Transition State Theory		200
	<i>Assumptions of the Theory</i>	201	
	<i>The Partition Function</i>	201	
	<i>The Rate Equation</i>	205	
	<i>Thermodynamic Interpretation</i>	207	
5.3	Chemical Interpretations of the Transition State		209
	<i>Reaction Coordinate Diagrams</i>	209	
	<i>The Rate-Determining Step</i>	213	
	<i>Composition of the Transition State</i>	216	
	<i>Position and Height of the Energy Barrier</i>	220	
	<i>Concerted and Stepwise Reactions</i>	230	
6.	Phenomena for Study		245
6.1	Temperature Dependence of Rates		245
	<i>The Arrhenius Equation</i>	245	
	<i>Curved Arrhenius Plots</i>	251	
	<i>Standard States</i>	253	

	<i>Complications in Buffered Solutions</i>	256
	<i>Uses of Activation Parameters</i>	259
6.2	The Effect of Pressure	261
6.3	Catalysis	263
	<i>Definitions and Examples</i>	263
	<i>Determination of Catalytic Rate Constants</i>	268
	<i>Distinction between General Base and Nucleophilic Catalysis</i>	271
6.4	pH Effects	273
	<i>Preliminaries</i>	273
	<i>Curves without Inflection Points</i>	274
	<i>Sigmoid Curves</i>	277
	<i>Bell-Shaped Curves</i>	285
6.5	Kinetic Isotope Effects	292
	<i>Primary Isotope Effects</i>	293
	<i>Secondary Isotope Effects</i>	298
	<i>Solvent Isotope Effects</i>	300
7.	Structure–Reactivity Relationships	311
7.1	Extrathermodynamic Relationships	311
7.2	Substituent Effects in Aromatic Compounds	315
	<i>The Hammett Equation</i>	315
	<i>Deviations and Variations</i>	320
	<i>The Substituent Constant</i>	323
	<i>The Reaction Constant</i>	328
	<i>The Ortho Effect</i>	334
	<i>Conclusions</i>	337
7.3	Substituent Effects in Aliphatic Compounds	338
	<i>Electronic Effects</i>	338
	<i>Steric Effects</i>	342
7.4	Substituent Effects in Reagents	344
	<i>General Acid-Base Catalysis</i>	344
	<i>Nucleophilicity in Acyl Transfers</i>	349
	<i>The α Effect</i>	355
	<i>Nucleophilicity at Saturated Carbon</i>	357
	<i>Intramolecular Reactivity</i>	363
7.5	Related Topics	368
	<i>The Isokinetic Relationship</i>	368
	<i>The Reactivity-Selectivity Principle</i>	371

8. Medium Effects	385
8.1 Introduction to Medium Effects	385
<i>Types of Effects</i>	385
<i>Physical Theories</i>	387
<i>Empirical Correlations</i>	388
8.2 Solvent Properties	389
<i>Physical Properties</i>	389
<i>Intermolecular Forces</i>	391
<i>Chemical Interactions</i>	394
<i>Classification of Solvents</i>	397
<i>Solvent Polarity</i>	399
<i>Solvation</i>	401
8.3 Physical Models of Medium Effects	405
<i>Neutral-Neutral Molecule Reactions</i>	405
<i>Ion-Neutral Molecule Reactions</i>	408
<i>Ion-Ion Reactions</i>	410
<i>The Cavity Model</i>	412
<i>Separation of Initial and Transition State Solvent Effects</i>	418
8.4 Empirical Measures and Correlations	425
<i>Thermodynamic Measures</i>	425
<i>Kinetic Measures</i>	427
<i>Spectroscopic Measures</i>	435
<i>Linear Solvent Effect Relationships</i>	442
<i>Statistical Approaches</i>	444
8.5 Strongly Acid Solutions	446
<i>Acidity Functions</i>	447
<i>Mechanisms of Acid Catalysis</i>	453
Appendices	463
A. Answers to Selected Problems	463
B. Physical Constants	467
Index	469
