

Contents

Chapter 1	
Chemical Applications of Molecular Spectroscopy – A Developing Perspective (N. Sheppard)	1
1 Introduction	1
2 A Historical Perspective	2
3 An Introduction to the Use of Fourier-Transform Methods in Chemical Spectroscopy	3
4 The Electromagnetic Spectrum (The Photon Spectroscopies)	7
5 Mass Spectrometry	28
6 Some More Specialised Spectroscopies	31
7 Sampling Considerations and Conclusions Across the Spectroscopies	37
8 References	40
Chapter 2	
Recent Advances in Vibrational Spectroscopy (H. A. Willis and D. B. Powell)	43
1 Introduction	43
2 Data Handling and Library Search	45
3 Reflectance Methods	51
4 Quantitative Analysis	51
5 Fast Spectroscopy	56
6 Microsampling	57
7 Inorganic Applications	64
8 Future Developments	66
9 References	66
Chapter 3	
Infrared Sampling Methods (P. S. Belton and R. H. Wilson)	67
1 Introduction	67
2 Transmission Methods	67

3 Diffuse Reflectance.....	70
4 Attenuated Total Reflectance.....	77
5 Photoacoustic Spectroscopy	80
6 Conclusions	85
7 References	86
8 Bibliography	86

Chapter 4

Electronic Absorption Spectroscopy: Theory and Practice

(M. R. S. McCoustra)	87
----------------------------	----

1 Introduction.....	87
2 Electronic Energy Levels and Transitions.....	87
3 Instrumentation in Electronic Absorption Spectroscopy	96
4 Applications of Electronic Absorption Spectroscopy.....	99
5 References	101

Chapter 5

Luminescence Spectroscopy (C. S. Creaser and J. R. Sodeau)	103
---	-----

1 Introduction.....	103
2 Fundamentals of Photophysics.....	103
3 Luminescence Instrumentation	117
4 Luminescence Measurement and Analytical Applications	120
5 References	135

Chapter 6

An Introduction to Nuclear Magnetic Resonance in Fluids

(P. S. Belton)	137
----------------------	-----

1 Basic Principles.....	137
2 Spectral Acquisition	139
3 Transverse Relaxation	142
4 Spin Lattice Relaxation.....	145
5 Spin Labelling Methods	146
6 Two-Dimensional NMR.....	149
7 Summary.....	153
8 Bibliography	154

Chapter 7

Multinuclear High-Resolution NMR in Solids

(M. E. A. Cudby and D. J. Williamson).....	155
--	-----

1 Introduction.....	155
2 Techniques Based on Carbon-13.....	156
3 Techniques Based on other Nuclei.....	177
4 References	183

Chapter 8

Principles and Techniques of Laser Spectroscopy

(D. L. Andrews and M. R. S. McCoustra)	185
1 General Principles of Laser Operation	185
2 Properties of Laser Light, and their Applications	187
3 Laser Sources of Spectroscopic Importance	191
4 Absorption Spectroscopy	199
5 Fluorescence Spectroscopy	208
6 Raman Spectroscopy	211
7 Free Jet Expansions and Laser Spectroscopy	218
8 Laser Ionisation Mass Spectrometry	220
9 References	223

Chapter 9

Raman Spectroscopy (S. F. A. Kettle) 225

1 What Is Raman Spectroscopy?	225
2 How Does the Raman Effect Occur?	225
3 How Is a Raman Spectrum Measured?	227
4 What Can Be Learned from Raman Spectroscopy?	233
5 Other Raman Spectroscopies	237
6 The Future	239
7 References	241
8 Bibliography	241

Chapter 10

Natural and Magnetic Circular Dichroism Spectroscopies

(A. J. Thomson)	243
1 Introduction	243
2 Natural Circular Dichroism	244
3 Magnetic Circular Dichroism	255
4 References	259

Chapter 11

Mass Spectrometry (C. S. Creaser and F. A. Mellon) 261

1 History and Introduction	261
2 Ionisation Methods	262
3 Mass Analysis	271
4 Ion Detection	279
5 Data Systems	280
6 Combined Chromatography/Mass Spectrometry	283
7 Tandem Mass Spectrometry	290
8 References	293

Chapter 12

Electron Paramagnetic Resonance and Electron Nuclear

Double Resonance Spectroscopy (A. J. Thomson) 295

1 Introduction 295

2 EPR Spectrometer 296

3 Spectral Parameters 299

4 Radicals in Polymers 302

5 Molecular Motion and Spin Labels 305

6 Spin Traps 311

7 Transition-Metal Ions in Proteins 312

8 Electron Nuclear Double Resonance 314

9 Pulsed EPR and Electron Spin Echo Envelope Modulation 319

10 References 319

11 Bibliography 320

Index 321
