
Inorganic Reactions and Methods

Volume 17

**Oligomerization and Polymerization Formation
of Intercalation Compounds**

Founding Editor

J.J. Zuckerman

Editor

A.P. Hagen

Contents of Volume 17

How to Use this Book
Preface to the Series
Editorial Consultants to the Series
Contributors to Volume 17

15.	Oligomerization and Polymerization	1
15.1.	Introduction	2
15.1.1.	Definitions and Scope.	2
15.1.1.1.	Definitions of Oligomers and Polymers.	2
15.1.1.2.	General Synthesis Methods.	4
15.1.1.3.	Scope.	7
15.1.1.3.1.	Small-Ring Systems—Examples of Synthesis.	7
15.1.1.3.2.	Cages—Examples of Synthesis.	12
15.1.1.3.3.	Short Chains—Examples of Synthesis.	13
15.1.1.3.4.	Long Chains—Examples of Synthesis.	15
15.1.2.	Characteristic Differences Between Small and Large Molecules as Related to Their Synthesis.	17
15.1.2.1.	Special Characteristics of Small Cyclic and Linear Molecules.	17
15.1.2.2.	Special Characteristics of Long-Chain Molecules.	18
15.1.3.	Chain–Chain, Chain–Ring and Ring–Ring Equilibria.	19
15.1.3.1.	Bond Lability in Inorganic Systems.	20
15.1.3.2.	Some Important Relationships Based on Theory.	21
15.1.3.2.1.	The Chain Population.	22
15.1.3.2.2.	The Ring Population and Network Macromolecules.	24

15.1	Introduction	
15.1.3.3.	Scrambling in Inorganic Systems.	26
15.1.3.3.1.	All-Neso Systems.	26
15.1.3.3.2.	Oligomers and Polymers in QZ_v - QT_v Systems with Z Bridging.	31
15.1.3.3.3.	Exchange of Segments Between Cyclic Molecules.	33
15.1.3.3.4.	Chains and Rings from Scrambling Between Two Kinds of Central Moieties.	34
15.2.	Ring-Ring and Ring-Polymer Interconversions	37
15.2.1.	Introduction.	37
15.2.2.	Interconversion of Sulfur or Selenium Rings and Chains	39
15.2.2.1.	Theory.	39
15.2.2.2.	Experimental Techniques	46
15.2.2.2.1.	Viscosity Measurements.	46
15.2.2.2.2.	Ultrasonic Absorption in Liquid Selenium.	47
15.2.2.2.3.	Quenching Experiments.	47
15.2.2.2.4.	Diamagnetic Susceptibility Measurements.	48
15.2.2.2.5.	Paramagnetic Susceptibility Measurements.	48
15.2.2.2.6.	Electron Spin Resonance Absorption (ESR).	50
15.2.2.2.7.	Optical Absorption.	50
15.2.2.2.8.	Vibrational Spectroscopy of Sulfur.	51
15.2.2.2.9.	Nuclear Magnetic Resonance (NMR) Measurements on Selenium.	51
15.2.2.2.10.	Dielectric Constant Measurements of Sulfur.	51
15.2.2.2.11.	Specific Heat Measurements on Sulfur and Selenium.	52
15.2.2.2.12.	Density Measurements.	52
15.2.2.2.13.	Thermal Conductivity in Liquid Selenium.	53
15.2.2.2.14.	Electrical Conductivity of Sulfur.	53

15.2.3.	In Oligomeric Catenates of P, As, Sb and Bi.	53
15.2.3.1.	General Trends.	53
15.2.3.2.	Phosphorus.	54
15.2.3.3.	Arsenic.	55
15.2.3.4.	Antimony.	58
15.2.3.5.	Stabilized Rings and Chains.	59
15.2.4.	In Silicon-Silicon Systems.	61
15.2.4.1.	Formation of Cyclic Silicon-Silicon Systems.	61
15.2.4.1.1.	Perarylcyclosilanes.	61
15.2.4.1.2.	Permethylcyclosilanes.	62
15.2.4.1.3.	Other Peralkylcyclosilanes.	66
15.2.4.1.4.	Alkylarylcyclosilanes.	66
15.2.4.2.	Reactions of Cyclosilanes.	69
15.2.4.2.1.	Substitutional Reactions.	69
15.2.4.2.2.	Ring-Cleavage Reactions.	71
15.2.4.2.3.	Photolysis.	74
15.2.4.3.	Ring-Ring and Chain-Ring Interconversion.	75
15.2.4.4.	Cage Polysilanes.	79
15.2.4.5.	Silane High Polymers.	80
15.2.5.	in Boron-Nitrogen Systems.	83
15.2.5.1.	Synthesis of Ring Compounds	83
15.2.5.1.1.	Borazines and Related Compounds.	83
15.2.5.1.2.	Coordinately Saturated B—N Rings.	86
15.2.5.2.	Factors Affecting Stability of Ring Species.	87
15.2.5.3.	Preparation of Linear Boron-Nitrogen Oligomers.	88
15.2.5.4.	Interconversions in Boron-Nitrogen Systems.	89
15.2.5.5.	Preparation of Boron-Nitrogen Polymers.	90
15.2.5.5.1.	Linear Boron-Nitrogen Chains.	90
15.2.5.5.2.	Polycyclic Chains.	91
15.2.6	in Boron-Oxygen and Boron-Sulfur Systems	93
15.2.6.1.	Anionic Boron-Oxygen Compounds.	93
15.2.6.2.	Molecular Boron-Oxygen Species.	94
15.2.6.3.	Boron-Sulfur Compounds.	95
15.2.6.4.	Ring-ring and Ring-chain interconversions.	96
15.2.7.	in Cage Polyboranes and Carboranes.	97

15.2	Ring-Ring and Ring-Polymer Interconversions	
15.2.7.1.	Polyborane Oligomers and Polymers; Syntheses.	98
15.2.7.2.	Preparation of Carborane-Siloxane Polymers.	99
15.2.7.3.	Preparation of Other Carborane-Incorporated Inorganic Polymers.	103
15.2.8.	Silicon-Oxygen Systems	105
15.2.8.1.	Formation of Cyclic Oligomers.	107
15.2.8.2.	Cyclosiloxane Structural Diversity.	108
15.2.8.3.	Ring-Ring Equilibration of Cyclosiloxanes.	112
15.2.8.4.	Ring-Chain Equilibration: Polymerization of Cyclosiloxanes.	114
15.2.8.5.	End-Capping Reactions.	115
15.2.9.	in Silicon-Nitrogen and Silicon-Sulfur Systems.	116
15.2.9.1.	Silicon-Nitrogen Syntheses.	116
15.2.9.2.	Silicon-Nitrogen Ring-Ring Interconversions.	118
15.2.9.3.	Cyclic Silicon-Nitrogen Oligomers Polymerization.	137
15.2.9.4.	Silicon-Sulfur Syntheses.	139
15.2.9.5.	Silicon-Sulfur Ring-Ring Interconversions.	142
15.2.9.6.	Cyclic Silicon-Sulfur Oligomer Polymerization.	142
15.2.10.	in Phosphorus-Oxygen Systems	143
15.2.10.1.	Reorganized Mixtures of Chains and Rings.	144
15.2.10.2.	Preparation of Cyclic Polymers.	145
15.2.10.3.	Chain Oligomers and Macromolecules.	148
15.2.10.4.	Related Mixed Systems.	150
15.2.11.	in Phosphorus-Nitrogen Oligomers and Polymers	151
15.2.11.1.	Halocyclophosphazene Polymerization	151
15.2.11.2.	Organocyclophosphazenes: Ring-Ring and Ring-Polymer Interconversions	154
15.2.11.3.	Mechanisms and Thermodynamics of Phosphazene Equilibrations.	159
15.2.11.4.	Polyorganophosphazenes via the Reactions of Polydihalophosphazenes.	161

15.2.12.	in Sulfur–Nitrogen Oligomers and Polymers	172
15.2.12.1.	Formation of the Monomer SN	172
15.2.12.2.	Formation of Cyclic Oligomers (SN) ₄ and (SN) ₂ .	173
15.2.12.3.	Polymerization of (SN) ₂ to (SN) _x .	174
15.2.12.4.	Halogenated Derivatives of (SN) _x .	175
15.2.12.5.	Formation of Cyclic Oligomers (NSX) _n (X = Cl, F; n = 3,4).	176
15.2.12.6.	Formation of the Cyclic Oligomers [NS(O)X] ₃ .	177
15.2.12.7.	Formation of the Cyclic Oligomer (SNH) ₄ .	178
15.2.12.8.	Formation of Thionyl Imide Polymers (HNSO) _x .	178
15.2.12.9.	S–N Oligomers with Terminal Organic Groups.	179
15.2.12.10.	S–Polymers with Organic Groups in the Backbone.	180
15.2.13.	Polymers Containing Metal–Oxygen and Metal–Carbon Bonds	180
15.2.13.1.	Introduction.	180
15.2.13.2.	M–C-Containing Polymers	181
15.2.13.2.1.	Metallocenes.	181
15.2.13.2.2.	Polycarbosilanes, Polysilyarylenes, Polycarbosiloxanes and Poly(carborane-siloxanes).	184
15.2.13.2.3.	Other Metallorganic Compounds.	185
15.2.13.3.	M–O-Containing Polymers	187
15.2.13.3.1.	Inorganic Polysilicas.	187
15.2.13.3.2.	Polymetallosiloxanes.	187
15.2.13.3.3.	Poly(silylarylene siloxanes).	188
15.2.13.3.4.	Polyarylsilsesquioxanes.	190
15.2.13.3.5.	Polymetal Phosphinates and Polyphosphonatolanes	190
15.2.13.3.6.	Miscellaneous.	191
15.2.13.4.	$\begin{array}{c} \text{O} \\ \\ \text{M—O—C} \end{array}$ -Containing Polymers.	191
15.2.13.5.	M–O–R (Polyether)-Containing Polymers.	192
15.2.13.6.	M–O–N-Containing Polymers (Polyamidoximes and Polyoximes).	193
15.2.14.	Coordination Polymers	194
15.2.14.1.	Introduction.	194
15.2.14.2.	General Synthetic Routes.	194

15.2	Ring-Ring and Ring-Polymer Interconversions	
15.2.14.3.	Ionomers.	200
15.2.14.4.	Property-Structure Principles.	200
15.2.14.5.	Selected Polymers.	201
15.2.14.5.1.	Metal Phosphinates.	201
15.2.14.5.2.	Platinum and Pd Coordination Polymers.	202
15.2.14.5.3.	Uranyl Ion Complexation.	203
15.2.14.5.4.	Bis- β -diketone-Based Polymers.	204
15.2.14.5.5.	Bisthiopiocolinamide-Based Polymers.	205
16.	Formation of Intercalation Compounds	207
16.1.	Introduction	208
16.2.	The Formation of Clathrates	209
16.2.1.	Definitions	209
16.2.2.	The Formation of Clathrates Having a Water Host Lattice	210
16.2.2.1.	Clathrates of the Gas Hydrate Type.	211
16.2.2.2.	Clathrates of the Liquid Hydrate Type	214
16.2.2.3.	Other Clathrate Hydrates.	215
16.2.3.	The Formation of Clathrates Having a Silicon, Germanium and Tin Host Lattice	219
16.2.3.1.	The Formation of Silicon and Germanium Clathrates by Thermal Decomposition of Silicides and Germanides.	221
16.2.3.2.	The Formation of Silicon, Germanium and Tin Clathrates from the Elements.	222
16.3.	The Formation of Tunnel Structures	223
16.3.1.	Ion Exchange	223
16.3.1.1.	Zeolites with Intersecting Tunnel Frameworks.	223
16.3.1.2.	Pyrochlores $A_{1-x}M_2O_6$	226
16.3.1.3.	$A_2M_7O_{18}$ Structure and Intergrowths with Pyrochlores.	228

16.3.1.4.	Alkali Antimonates $K_2Sb_4O_{11}$ and $K_3Sb_5O_{14}$.	228
16.3.1.5.	Ammonium and Potassium 12 Molybdophosphates $A_3PO_4Mo_{12}O_{36}$.	228
16.3.1.6.	Structures with Parallel Tunnels	229
16.3.2.	by Electrolysis	229
16.3.2.1.	Rate of Growth of Deposit.	230
16.3.2.2.	Mechanism of Electrochemical Preparation of Tungsten Bronzes	230
16.3.2.2.1.	Nature of the Reduced Species.	230
16.3.2.2.2.	Reactions at the Electrodes.	231
16.3.2.3.	Experimental Procedure and Data	232
16.3.2.3.1.	the Electrolyte Cell.	232
16.3.2.3.2.	Effect of the Melt Composition and Temperature.	232
16.3.2.3.3.	Examples of Oxides with Tunnel Structures Obtained by Molten Salt Electrolysis.	234
16.4.	The Formation of Sheet Structures	237
16.4.1.	Introduction.	237
16.4.2.	Graphite and Boron Nitride Intercalation Compounds	238
16.4.2.1.	Electron Acceptors	238
16.4.2.1.1.	Halides.	238
16.4.2.1.2.	Oxyhalides.	243
16.4.2.1.3.	Oxides.	244
16.4.2.1.4.	Acids.	245
16.4.2.1.5.	Halogens and Interhalogens.	246
16.4.2.2.	Electron Donors	247
16.4.2.2.1.	Synthesis of Graphite and Carbon Intercalation Compounds Containing One metal.	247
16.4.2.2.2.	Graphite Intercalation Compounds Containing Two Metals (Ternary Compounds).	251
16.4.2.3.	Mixed Metal–Molecule–Graphite Ternaries.	255
16.4.2.4.	Alkali–Metal–Hydrogen–Graphite Ternaries.	257
16.4.2.4.1.	Hydrogenation of the binary phases MC_8 and MC_{24} ($M = K, Rb, Cs$).	257
16.4.2.4.2.	Intercalation of Alkali–Metal Hydrides into Graphite.	257

16.4	The Formation of Sheet Structures	
16.4.2.4.3.	Intercalation of Quaternary Compounds with Hydrogen and Two Alkali Metals into Graphite.	259
16.4.2.4.4.	Physiosorption of Hydrogen and Deuterium in the Second-Stage Compounds MC_{24} ($M = K, Rb$ or Cs)	259
16.4.2.5.	Graphite Oxides	259
16.4.2.5.1.	Definition and Nomenclature of Graphite Oxides.	260
16.4.2.5.2.	Preparation of Graphite Oxides.	261
16.4.2.5.3.	Reactivity of Graphite Oxides.	263
16.4.2.5.4.	Graphite Oxide Membranes.	265
16.4.2.6.	Graphite Fluorides	265
16.4.2.6.1.	Poly(monocarbon monofluoride), $(CF)_n$.	265
16.4.2.6.2.	Poly(dicarbon monofluoride), $(C_2F)_n$.	269
16.4.2.6.3.	Poly(tetracarbon monofluoride), $(C_4F)_n$.	270
16.4.2.7.	Residue and Surface Compounds	271
16.4.2.7.1.	Introduction and Definitions.	271
16.4.2.7.2.	Preparation of Residue Compounds.	272
16.4.2.7.3.	Preparation of Surface Compounds.	274
16.4.2.8.	Electrochemical Formation.	276
16.4.2.8.1.	Strengths and Limitations of the Electrochemical Technique.	276
16.4.2.8.2.	Cathodic Reduction of Graphite.	280
16.4.2.8.3.	Anodic Oxidation of Graphite.	281
16.4.3.	Dichalcogenides	284
16.4.3.1.	Layered Dichalcogenides.	284
16.4.3.2.	Alkali-Metal Intercalates.	288
16.4.3.3.	Electrochemical Formation	295
16.4.3.4.	Molecular Intercalates.	300
16.4.3.5.	Hydrated and Solvated Alkali-Metal Phases.	306
16.4.3.6.	Intercalation-Substitution Compounds and Ionic Mobility	308
16.4.4.	Trichalcogenohypophosphates.	309
16.4.5.	Transition-Metal Oxyhalides.	313
16.4.6.	Lamellar Oxides.	318
16.4.7.	Lamellar Silicates and Related Materials.	323
16.4.7.1.	Lamellar Silicates.	324
16.4.7.2.	Intercalation Products.	328

16.4.8.	The Chemical Reactivity of Low-Dimensional Solids	331
16.4.8.1.	The Electronic Transfer and the Formation of Cationic Intercalation Compounds.	332
16.4.8.2.	Structural Charges Induced by Electronic Transfer.	333
16.4.8.3.	Strong Ion–Electron Coupling.	335
16.4.8.4.	Microdomains in MPS_3 Phases.	337
16.4.8.5.	Electronic Transfer and Δc Parameter Expansion.	338
16.4.8.6.	Acidobasic Topochemical Reactions.	339
16.4.8.7.	“Internal Surfaces” Grafting Chemistry.	340
	List of Abbreviations	341
	Author Index	000
	Compound Index	000
	Subject Index	000
