

Contents

1	Introduction	
1.1	Occurrence and Abundance of Silicon	1
1.2	Technical Importance of Silicon	5
1.3	Diversity of Silicon Compounds	5
2	Methods to Describe the Atomic Structure of Silicates	
2.1	Model Representations of Silicate Structures	7
2.2	Treatment of Tetrahedrally Coordinated Cations in Silicates	12
3	Chemical Bonds in Silicates	
3.1	The Silicon – Oxygen Bond	14
3.1.1	Coordination Numbers of Silicon	14
3.1.2	Bond Lengths and Bond Angles in Silicates Containing [SiO ₄] Tetrahedra (Tetraoxosilicates)	15
3.1.2.1	Correlations Between Si–O Distance, Oxygen Coordination Number, and Bond Strength	16
3.1.2.2	Correlations Between Si–O Distance and Bond Angles	20
3.1.2.3	Correlations Between Si–O Distance, Oxygen Coordination Number, Bond Strength, and Si–O–Si Angle	21
3.1.2.4	Influence of Structural Disorder on Si–O Distances	22
3.1.2.5	Si–O–Si Angles	24
3.1.3	Bond Lengths and Bond Angles in Silicates Containing [SiO ₆] Octahedra (Hexaaxosilicates)	30
3.1.4	The Nature of the Si–O Bond	32
3.1.4.1	The Ionic Model	33
3.1.4.2	The Covalent Model	34
3.1.4.3	Nonbonded Interactions	44
3.1.4.4	The Ionicity of the Si–O Bond	46
3.2	The Cation – Oxygen Bond, M–O, and Its Influence on the Si–O Bond	48
3.2.1	Electropositive Cations	48
3.2.2	Electronegative Cations	51

4 Crystal Chemical Classification of Silicate Anions

4.1	General Principles of the Classification	52
4.2	Parameters Used in the Crystal Chemical Classification of Silicate Anions	52
4.3	The Crystal Chemical System of Silicate Anions	63
4.4	Periodic Character of the Crystal Chemical Classification of Silicate Anions	67

5 Nomenclature and Structural Formulae of Silicate Anions and Silicates

5.1	Nomenclature	69
5.1.1	Chemical Nomenclature	69
5.1.2	Mineralogical Nomenclature	71
5.2	Structural Formulae	72

6 Crystal Chemical Classification of Silicates: General Part

6.1	Mixed-Anion Silicates	76
6.2	The Crystal Chemical System of Silicates	76
6.3	Further Subdivision of Silicates	78
6.3.1	Atomic Ratio Si : O of Silicate Anions	78
6.3.2	Degree of Chain Stretching	80
6.3.3	Silicate Anion Symmetry	82
6.3.4	Cation – Oxygen Polyhedra	82
6.4	Silicate Classification Procedure	82
6.5	Shortcomings of the Crystal Chemical Classification	85

7 Crystal Chemical Classification of Silicates: Special Part

7.1	Silicon Compounds with $[\text{SiO}_6]$ Octahedra (Hexaosilicates)	90
7.2	Silicates Containing $[\text{SiO}_4]$ Tetrahedra (Tetraoxosilicates)	93
7.2.1	Silicates with Edge-Sharing Tetrahedra	93
7.2.2	Silicates with Corner-Sharing Tetrahedra	93
7.2.2.1	Oligosilicates (Sorosilicates)	93
7.2.2.2	Ring Silicates (Cyclosilicates)	96
7.2.2.3	Single Chain Silicates (Monopolysilicates)	102
7.2.2.4	Multiple Chain Silicates (Oligopolysilicates)	108
7.2.2.5	Single Layer Silicates (Monophyllosilicates)	113
7.2.2.6	Double Layer Silicates (Diphyllsilicates)	121
7.2.2.7	Tectosilicates	126
7.2.2.8	Silicates with Interpenetrating Anions	128
7.3	Mixed-Anion Silicates	129
7.4	Estimated Frequency Distribution of Silicate Species	130

8	Other Classifications of Silicates	
8.1	Early Classifications of Silicates	136
8.2	Kostov's Classification of Silicates	137
8.3	Zoltai's Classification of Silicates	138
8.4	Geometrical Classification of Tectosilicates	143
8.4.1	Connectedness	144
8.4.2	Secondary Building Units	145
8.4.3	Chain-Like Building Units	146
8.4.4	Layer-Like Building Units	151
8.4.5	Polyhedral Building Units; Framework Density	155
8.4.6	Concluding Remarks	159
8.5	Silicate Classification Based on Non-Silicon Cation – Oxygen Polyhedra	159
9	General Rules for Silicate Anion Topology	161

10	Influence of Non-Tetrahedral Cation Properties on the Structure of Silicate Anions	
10.1	Influence of Cation Properties on the Conformation of Unbranched Single Chain Anions	170
10.1.1	Conformation of Unbranched Silicate Single Chains	170
10.1.2	Qualitative Correlations Between Chain Conformation and Cation Properties	171
10.1.3	Semiquantitative Correlations Between Chain Conformation and Cation Properties	176
10.1.4	Crystallochemical Interpretation of the Correlations	178
10.1.4.1	Correlation Between Stretching Factor and Average Cation Electronegativity	179
10.1.4.2	Correlation Between Stretching Factor and Average Cation Valence	182
10.1.4.3	Correlation Between Stretching Factor and Average Cation Radius	182
10.1.4.4	Correlation Between Stretching Factor and Chain Periodicity	183
10.2	Influence of Cation Properties on the Shape of Unbranched Multiple Chain Anions	184
10.3	Influence of Cation Properties on the Shape of Branched Silicate Anions	187
10.4	Influence of Cation Properties on the Formation of Cyclic Silicate Anions	191
10.5	Influence of Cation Properties on the Shape of Single Layer Silicate Anions	195

10.5.1	Anhydrous Single Layer Silicates	198
10.5.2	The Shape of Silicate Anions in Anhydrous Silica-Rich Barium Silicates	206
10.5.3	Hydrous Single Layer Silicates	212
10.5.3.1	Kaolinite-Like and Mica-Like Arrangements	213
10.5.3.2	Strain Reduction Mechanisms in Cation-Poor Phyllosilicates	214
10.5.3.3	Strain Reduction Mechanisms in Cation-Rich Phyllosilicates	223
10.5.4	Comparison of Anhydrous and Hydrous Single Layer Silicates	229
10.6	Influence of Cation Properties on the Shape of Double Layer Silicate Anions	231
10.7	Influence of Cation Properties on the Shape of Silicate Frameworks	239
10.7.1	Silica and Clathrasils	240
10.7.2	Zeolites	244
10.7.3	Aluminosilicates $M[(Al, Si)_4O_8]$: Feldspars and Their Polymorphs	246
10.7.3.1	$M[AlSi_3O_8]$ Phases with $M = Li, Na, K, Rb, Cs$	246
10.7.3.2	$M[Al_2Si_2O_8]$ Phases with $M = Mg, Ca, Sr, Ba$	252
10.7.4	Aluminosilicates $M[AlSi_2O_6]$	253
10.7.5	Aluminosilicates $M[AlSiO_4]$	255
10.7.6	Comparison of Framework Silicates	260
11	Conclusion	
11.1	Correlation Between Classification Parameters and Cation Properties	266
11.2	Influence of Cation Radius on the Structure of Silicates	274
11.3	Characteristics of the Crystal Chemical Classification of Silicates	277
