

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Modelling Self-organised Aggregation and Movement.....	1
1.1.1	Individual-Based Models .....	4
1.1.2	Kinetic and Macroscopic Models.....	17
1.2	The Importance of Communication for Self-organised Biological Behaviours .....	20
1.3	Overview .....	23
	References .....	32
<b>2</b>	<b>A Short Introduction to One-Dimensional Conservation Laws</b> .....	37
2.1	Introduction .....	37
2.2	Fundamental Results for Systems of Conservation Laws.....	40
2.2.1	Travelling Waves, Rarefaction Waves, Shocks and Contact Discontinuities.....	45
2.2.2	The Rankine-Hugoniot Jump Condition .....	47
2.2.3	Admissibility Conditions: Entropy, Vanishing Viscosity and Speed Stability .....	48
	References .....	52
<b>3</b>	<b>One-Equation Local Hyperbolic Models</b> .....	55
3.1	Introduction .....	55
3.2	First-Order Traffic Models .....	57
3.3	Second-Order Traffic Models .....	62
3.4	Third-Order Traffic Models .....	68
3.5	Traffic Models that Include Reaction Terms .....	69
3.6	Advection-Reaction Equations for Animal Population Dynamics.....	72
3.7	Analytical Approaches for the Investigation of Patterns: Speed of Travelling Waves .....	74
3.8	Numerical Approaches .....	77
	References .....	78

<b>4</b>	<b>Local Hyperbolic/Kinetic Systems in 1D</b> .....	81
4.1	Introduction .....	81
4.2	Derivation of Local Models in 1D .....	83
4.3	Density-Dependent Turning Rates .....	87
4.4	Analytical Approaches for the Investigation of Patterns: Stability of Homogeneous States and Travelling Waves for Models with Density-Dependent Turning Rates .....	89
4.5	Density-Dependent Speeds .....	92
4.6	Models that Include Reaction Terms .....	96
4.7	Traffic Models .....	99
	4.7.1 First-Order Models .....	99
	4.7.2 Second-Order Models .....	100
4.8	Multiple Population Models .....	102
	References .....	104
<b>5</b>	<b>Nonlocal Hyperbolic Models in 1D</b> .....	107
5.1	Introduction .....	107
5.2	One-Equation Nonlocal Models with Density-Dependent Speeds .....	109
5.3	Derivation of Nonlocal Hyperbolic Systems .....	113
5.4	Alignment Models .....	116
5.5	Repulsive, Attractive, and Alignment Models .....	117
5.6	Multiple Populations .....	127
5.7	Analytical Approaches for the Investigation of Patterns: Loss of Patterns in the Parabolic Limit .....	137
5.8	Systems with Density-Dependent Speeds .....	140
5.9	Systems Incorporating Environmental Stochasticity .....	145
	References .....	149
<b>6</b>	<b>Multi-Dimensional Transport Equations</b> .....	153
6.1	General Description of 2D and 3D Models .....	153
6.2	Local Advective Models in 2D .....	156
6.3	Nonlocal Advective Models in 2D .....	158
6.4	Velocity-Jump Processes .....	160
6.5	Kinetic Models for Active Particles .....	168
6.6	Multiscale Models with Explicit Dynamics for the Microscale Variables .....	171
6.7	Derivation of Mean-Field Models .....	175
6.8	Analytical Approaches for the Investigation of Patterns: Hyperbolic (and Parabolic) Scaling .....	180
6.9	Analytical Approaches for the Investigation of Patterns: Grazing Collision Limit .....	182
6.10	Multiple Population Models with Nonlocal Interactions .....	186
6.11	Explicit Stochastic Models .....	189
	References .....	191

<b>7</b>	<b>Numerical Approaches for Kinetic and Hyperbolic Models</b> .....	195
7.1	Numerical Schemes for Hyperbolic Models .....	196
7.1.1	1D Finite Difference and Finite Volume Methods .....	197
7.1.2	Higher Resolution Schemes for Nonlinear Equations .....	202
7.1.3	Multi-Dimensional Finite Difference and Finite Volume Schemes .....	205
7.2	Numerical Schemes for Higher Dimension Kinetic Models.....	207
7.2.1	Spectral Methods .....	208
7.2.2	Monte Carlo Methods .....	211
7.2.3	Multi-Scale Stiff Kinetic Problems: Asymptotic Preserving Methods and Domain Decomposition Methods .....	213
7.3	Boundary Conditions .....	221
	References .....	224
<b>8</b>	<b>A Few Notions of Stability and Bifurcation Theory</b> .....	227
8.1	Basic Notions of Linear Stability Analysis.....	228
8.1.1	Linear Stability Analysis for ODE Models .....	228
8.1.2	Linear Stability Analysis for PDE Models .....	229
8.2	Basic Notions of Bifurcation Theory .....	233
8.3	Symmetry of Hyperbolic and Kinetic Equations .....	241
8.4	Compact Operators and the Fredholm Alternative .....	245
8.5	Analytical Approaches for the Investigation of Patterns: Weakly Nonlinear Analysis .....	248
8.6	Centre Manifold Theory .....	255
8.7	Stochastic Bifurcations .....	261
8.8	Bifurcation and Symmetry Theory in the Context of Hyperbolic/Kinetic Models .....	262
	References .....	263
<b>9</b>	<b>Discussion and Further Open Problems</b> .....	265
9.1	Summary .....	265
9.2	Biological Relevance of Models' Assumptions and Generated Numerical Patterns .....	266
9.3	Directions for Future Research.....	268
	References .....	272
	<b>Index</b> .....	275
