Contents

Chapter 1. Introduction 1
1.1. Background 1
1.2. Some motivating examples 2
1.3. Outline of results 4

Chapter 2. The Classes $\mathcal{P}(\mathbf{E})$ and $\mathcal{M}(\mathbf{E})$ 11
2.1. Notation 11
2.2. Global norms 13
2.3. Classes of distributions and multipliers 14

Chapter 3. Marked partitions and decompositions of $\mathbb{R}^N$ 17
3.1. Dominant terms in $N_j(\mathbf{t})$ and $\widehat{N_j}(\mathbf{t})$ 17
3.2. Marked partitions and the sets E_S and $\widehat{E_S}$ 18
3.3. Characterizing the sets E_S^A and $\widehat{E_S^A}$ 19
3.4. Estimates of kernels and multipliers on E_S and $\widehat{E_S}$ 22
3.5. A coarser decomposition of $\mathbb{R}^N$ associated to $S \in \mathcal{S}(n)$ 23

Chapter 4. Fourier transform duality of kernels and multipliers 25
4.1. Fourier transforms of multipliers 25
4.2. Fourier transforms of kernels 29

Chapter 5. Dyadic sums of Schwartz functions 33
5.1. Cones associated to a matrix $\mathbf{E}$ 33
5.2. Inclusions among classes of kernels associated to different matrices 34
5.3. Coarser decompositions and lower dimensional matrices 35
5.4. Size estimates 37
5.5. Cancellation properties 38
5.6. Dyadic sums with weak cancellation 41

Chapter 6. Decomposition of multipliers and kernels 45
6.1. New matrices $\mathbf{E}_S$ 45
6.2. Road map for the dyadic decomposition 46
6.3. Partitions of unity 47
6.4. Dyadic decomposition of a multiplier 50
6.5. Dyadic decomposition of a kernel 52

Chapter 7. The rank of $\mathbf{E}$ and integrability at infinity 57
7.1. The rank 1 case: Calderón-Zygmund kernels 57
7.2. Higher rank and integrability at infinity 59
7.3. Higher rank and weak-type estimates near zero 61

Chapter 8. Convolution operators on homogeneous nilpotent Lie groups 63
8.1. Convolution of scaled bump functions; compatibility of dilations and convolution 63
8.2. Automorphic flag kernels and L^p-boundedness of convolution operators 66

Chapter 9. Composition of operators 69
9.1. A preliminary decomposition 72
9.2. Reduction to the case of finite sets 72
9.3. Properties of the convolution $[\varphi_S^I]_I * [\psi_T^J]_J$ 73
9.4. A further decomposition of $\Gamma_{\mathbb{Z}}(\mathbf{E}_S) \times \Gamma_{\mathbb{Z}}(\mathbf{E}_T)$ 76
9.5. Fixed and free indices 79
9.6. A finer decomposition of $\mathbb{R}^N$ 81
9.7. The matrix $\mathbf{E}_{S,T,W}$ 82
9.8. The class $\mathcal{P}_0(\mathbf{E}_{S,T,W})$ 84
9.9. Estimates for $[\varphi]_I * [\psi]_J$ 86
9.10. Proof of Theorem 9.2 89

Chapter 10. Convolution of Calderón-Zygmund kernels 91
10.1. Calderón-Zygmund kernels 91
10.2. A general convolution theorem 91
10.3. Convolution of two Calderón-Zygmund kernels 92

Chapter 11. Two-flag kernels and multipliers 99
11.1. Flag kernels and multipliers 99
11.2. Pairs of opposite flags 100
11.3. Two-step flags 101
11.4. General two-flag kernels 103
11.5. Proof of Lemma 11.6 106

Chapter 12. Extended kernels and operators 109
12.1. The L^p boundedness of the operators 109
12.2. The algebra of operators 112

Chapter 13. The role of pseudo-differential operators 115
13.1. The isotropic extended kernels 116
13.2. Proof of Theorem 13.1 118
13.3. The space L_1^p 121

Chapter 14. Appendix I: Properties of cones $\Gamma(\mathbf{A})$ 123
14.1. Optimal inequalities and the basic hypothesis 123
14.2. Partial matrices 124
14.3. Projections 125
14.4. The dimension of $\Gamma(\mathbf{E})$ 126
14.5. The reduced matrix $\mathbf{E}^\flat$ 128

Chapter 15. Appendix II: Estimates for homogeneous norms 131

Chapter 16. Appendix III: Estimates for geometric sums 135

Bibliography 139
