

CONTENTS

Summary	2
1. Introduction	4
2. Terminology	5
3. Organic matter, soil functions and ecosystem services	6
4. Soil carbon, carbon sequestration and climate change	10
5. Rates of increase of soil organic carbon in long-term experiments at Rothamsted sites	12
5.1. Application of manure or other organic amendments	12
5.2. Addition of straw	16
5.3. Cover crops and green manures	19
5.4. Changing from continuous arable cropping to ley-arable rotations	19
5.5. Applying nitrogen fertiliser	20
5.6. Removing land from arable cropping	21
6. Wider implications of data from Rothamsted long-term experiments	24
6.1. General considerations	24
6.2. Removal of land from arable cropping	25
6.3. Applying manures	27
6.4. Cover crops and green manures	28
6.5. Retention of crop residues	29
6.6. Application of nitrogen fertiliser	30
6.7. Conversion from continuous arable to ley-arable cropping	31
7. Land management practices not included in Rothamsted long term experiments	32
7.1. Zero and reduced tillage	32
7.2. Agroforestry	33
7.3. Biochar	34
8. Trace gases and nitrogen management	34
9. Conclusions	37
10. Acknowledgements	38
11. References	38
Related Proceedings of the Society	46
