# Symmetry Breaking for Representations of Rank One Orthogonal Groups II

# Contents

<b>1</b>	<b>Introduction</b> .....	1
<b>2</b>	<b>Review of Principal Series Representations</b> .....	13
2.1	Notation .....	13
2.1.1	Subgroups of $G = O(n + 1, 1)$ and $G' = O(n, 1)$ .....	13
2.1.2	Isotropic Cone $\Xi$ .....	16
2.1.3	Characters $\chi_{\pm\pm}$ of the Component Group $G/G_0$ .....	17
2.1.4	The Center $\mathfrak{Z}_G(\mathfrak{g})$ and the Harish-Chandra Isomorphism .....	17
2.2	Representations of the Orthogonal Group $O(N)$ .....	20
2.2.1	Notation for Irreducible Representations of $O(N)$ .....	20
2.2.2	Branching Laws for $O(N) \downarrow SO(N)$ .....	22
2.2.3	Branching Laws $O(N) \downarrow O(N - 1)$ .....	23
2.3	Principal Series Representations $I_\delta(V, \lambda)$ of the Orthogonal Group $G = O(n + 1, 1)$ .....	23
2.3.1	$C^\infty$ -induced Representations $I_\delta(V, \lambda)$ .....	24
2.3.2	Tensoring with Characters $\chi_{\pm\pm}$ of $G$ .....	25
2.3.3	$K$ -structure of the Principal Series Representation $I_\delta(V, \lambda)$ .....	26
2.4	Principal Series Representations $I_\delta(i, \lambda)$ .....	27
2.4.1	$\mathfrak{Z}_G(\mathfrak{g})$ -infinitesimal Character of $I_\delta(i, \lambda)$ .....	27
2.4.2	$K$ -type Formula of the Principal Series Representations $I_\delta(i, \lambda)$ .....	28
2.4.3	Basic $K$ -types of $I_\delta(i, \lambda)$ .....	28
2.4.4	Reducibility of $I_\delta(i, \lambda)$ .....	29
2.4.5	Irreducible Subquotients of $I_\delta(i, i)$ .....	30
<b>3</b>	<b>Symmetry Breaking Operators for Principal Series Representations—General Theory</b> .....	33
3.1	Generalities .....	33
3.2	Summary of Results .....	34
3.2.1	Symmetry Breaking Operators When $[V : W] \neq 0$ .....	34

3.2.2	Differential Symmetry Breaking Operators When $[V : W] \neq 0$ .....	35
3.2.3	Sporadic Symmetry Breaking Operators When $[V : W] = 0$ .....	36
3.2.4	Existence Condition for Regular Symmetry Breaking Operators .....	37
3.2.5	Integral Operators, Analytic Continuation, and Normalization Factors .....	38
3.3	Classification Scheme of Symmetry Breaking Operators: General Case .....	39
3.4	Summary: Vanishing of Regular Symmetry Breaking Operators $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{V, W}$ .....	42
3.5	The Classification of Symmetry Breaking Operators for Differential Forms .....	43
3.5.1	Vanishing Condition for the Regular Symmetry Breaking Operators $\tilde{\mathbb{A}}_{\lambda, \nu, \gamma}^{i, j}$ .....	44
3.5.2	Differential Symmetry Breaking Operators .....	45
3.5.3	Formula of the Dimension of $\text{Hom}_{G'}(I_\delta(i, \lambda) _{G'}, J_\varepsilon(j, \nu))$ .....	48
3.5.4	Classification of Symmetry Breaking Operators $I_\delta(i, \lambda) \rightarrow J_\varepsilon(j, \nu)$ .....	49
3.6	Consequences of Main Theorems in Sections 3.3 and 3.5 .....	50
3.6.1	Tempered Representations .....	51
3.6.2	Complementary Series Representations .....	51
3.6.3	Singular Complementary Series Representations .....	52
3.7	Actions of $(G/G_0)^\wedge \times (G'/G'_0)^\wedge$ on Symmetry Breaking Operators .....	54
3.7.1	Generalities: The Action of Character Group of $G \times G'$ on $\{\text{Hom}_{G'}(\Pi _{G'}, \pi)\}$ in the General Case .....	54
3.7.2	Actions of the Character Group of the Component Group on $\{\text{Hom}_{G'}(I_\delta(i, \lambda) _{G'}, J_\varepsilon(j, \nu))\}$ .....	55
3.7.3	Actions of Characters of the Component Group on $\text{Hom}_{G'}(\Pi_{i, \delta} _{G'}, \pi_{j, \varepsilon})$ .....	57
<b>4</b>	<b>Symmetry Breaking for Irreducible Representations with Infinitesimal Character <math>\rho</math></b> .....	<b>59</b>
4.1	Main Theorems .....	59
4.2	Graphic Description of the Multiplicity for Irreducible Representations with Infinitesimal Character $\rho$ .....	60
<b>5</b>	<b>Regular Symmetry Breaking Operators</b> .....	<b>63</b>
5.1	Generalities .....	63
5.1.1	Distribution Kernels of Symmetry Breaking Operators .....	63

5.1.2	Invariant Bilinear Forms on Admissible Smooth Representations and Symmetry Breaking Operators ....	65
5.2	Distribution Kernels of Symmetry Breaking Operators for $G = O(n + 1, 1)$ .....	68
5.2.1	Bruhat and Iwasawa Decompositions for $G = O(n + 1, 1)$ .....	68
5.2.2	Distribution Kernels for Symmetry Breaking Operators .....	70
5.2.3	Distribution Sections for Dualizing Bundle $\mathcal{V}_{\lambda, \delta}^*$ over $G/P$ .....	71
5.2.4	Pair of Distribution Kernels for Symmetry Breaking Operators.....	74
5.3	Distribution Kernels near Infinity .....	76
5.4	Vanishing Condition of Differential Symmetry Breaking Operators: Proof of Theorem 3.12 (1) .....	78
5.5	Upper Estimate of the Multiplicities .....	79
5.6	Proof of Theorem 3.10: Analytic Continuation of Symmetry Breaking Operators $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{V, W}$ .....	81
5.6.1	Normalized Distributions $(\tilde{\mathcal{A}}_{\lambda, \nu, \gamma}^{V, W})_{\infty}$ at Infinity .....	82
5.6.2	Preliminary Results in the Scalar-Valued Case .....	82
5.6.3	Step 1: Very Regular Case .....	85
5.6.4	Step 2: Reduction to the Scalar-Valued Case .....	85
5.6.5	Step 3: Proof of Holomorphic Continuation .....	88
5.6.6	Proof of Theorem 3.10 .....	89
5.7	Existence Condition for Regular Symmetry Breaking Operators: Proof of Theorem 3.9 .....	89
5.8	Zeros of $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{V, W}$ : Proof of Theorem 3.15 .....	91
5.9	Generic Multiplicity-one Theorem: Proof of Theorem 3.3 .....	91
5.10	Lower Estimate of the Multiplicities .....	92
5.11	Renormalization of Symmetry Breaking Operators $\tilde{\mathbb{A}}_{\lambda, \nu, \gamma}^{V, W}$ .....	93
5.11.1	Expansion of $\tilde{\mathbb{A}}_{\lambda, \nu, \gamma}^{V, W}$ Along $\nu = \text{Constant}$ .....	93
5.11.2	Renormalized Regular Symmetry Breaking Operator $\tilde{\mathbb{A}}_{\lambda, \nu, \gamma}^{V, W}$ .....	94
<b>6</b>	<b>Differential Symmetry Breaking Operators</b> .....	<b>97</b>
6.1	Differential Operators Between Two Manifolds.....	98
6.2	Duality for Differential Symmetry Breaking Operators.....	99
6.3	Parabolic Subgroup Compatible with a Reductive Subgroup.....	100
6.4	Character Identity for Branching in the Parabolic BGG Category .....	102
6.5	Branching Laws for Generalized Verma Modules .....	103
6.6	Multiplicity-one Theorem for Differential Symmetry Breaking Operators: Proof of Theorem 6.1 (2) .....	105

6.7	Existence of Differential Symmetry Breaking Operators: Extension to Special Parameters .....	105
6.8	Proof of Theorem 3.13 (2-b) .....	107
<b>7</b>	<b>Minor Summation Formulæ Related to Exterior Tensor <math>\bigwedge^i(\mathbb{C}^n)</math> ....</b>	<b>111</b>
7.1	Some Notation on Index Sets.....	111
7.1.1	Exterior Tensors $\bigwedge^i(\mathbb{C}^n)$ .....	112
7.1.2	Signatures for Index Sets .....	112
7.2	Minor Determinant for $\psi : \mathbb{R}^N - \{0\} \rightarrow O(N)$ .....	113
7.3	Minor Summation Formulæ .....	115
<b>8</b>	<b>The Knapp–Stein Intertwining Operators Revisited: Renormalization and <math>K</math>-spectrum .....</b>	<b>119</b>
8.1	Basic $K$ -types in the Compact Picture .....	119
8.2	$K$ -picture and $N$ -picture of Principal Series Representations ....	121
8.2.1	Explicit $K$ -finite Vectors in the $N$ -picture .....	121
8.2.2	Basic $K$ -types in the $N$ -picture.....	123
8.3	Knapp–Stein Intertwining Operator.....	125
8.3.1	Knapp–Stein Intertwining Operator .....	125
8.3.2	$K$ -spectrum of the Knapp–Stein Intertwining Operator .....	126
8.3.3	Vanishing of the Knapp–Stein Operator .....	127
8.3.4	Integration Formula for the $(K, K)$ -spectrum .....	128
8.4	Renormalization of the Knapp–Stein Intertwining Operator .....	131
8.5	Kernel of the Knapp–Stein Operator .....	132
<b>9</b>	<b>Regular Symmetry Breaking Operators <math>\tilde{\mathbb{A}}_{\lambda, \nu, \delta \epsilon}^{i, j}</math> from <math>I_\delta(i, \lambda)</math> to <math>J_\epsilon(j, \nu)</math>.....</b>	<b>135</b>
9.1	Regular Symmetry Breaking Operators $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{i, j}$ .....	136
9.1.1	Existence Condition for Regular Symmetry Breaking Operators.....	136
9.1.2	Construction of $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{i, j}$ for $j \in \{i - 1, i\}$ .....	137
9.2	Zeros of $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{i, j}$ : Proof of Theorem 3.19.....	138
9.2.1	Residue Formula of the Regular Symmetry Breaking Operator $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{i, j}$ .....	138
9.2.2	Zeros of $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{i, j}$ .....	139
9.3	$(K, K')$ -spectrum for Symmetry Breaking Operators.....	140
9.3.1	Generalities: $(K, K')$ -spectrum of Symmetry Breaking Operators.....	141
9.4	Explicit Formula of $(K, K')$ -spectrum on Basic $K$ -types for Regular Symmetry Breaking Operators $\tilde{\mathbb{A}}_{\lambda, \nu, \pm}^{i, j}$ .....	142
9.5	Proof of Vanishing Results on $(K, K')$ -spectrum .....	143
9.6	Proof of Theorem 9.8 on $(K, K')$ -spectrum for the Normalized Symmetry Breaking Operator $\tilde{\mathbb{A}}_{\lambda, \nu, +}^{i, j} : I_\delta(i, \lambda) \rightarrow J_\delta(j, \nu)$ .....	144
9.6.1	Integral Expression of $(K, K')$ -spectrum .....	145

9.6.2	Integral Formula of the $(K, K')$ -spectrum .....	149
9.7	Proof of Theorem 9.8 on the $(K, K')$ -spectrum for $\tilde{A}_{\lambda, \nu, -}^{i, j} : I_{\delta}(i, \lambda) \rightarrow J_{-\delta}(j, \nu)$ .....	152
9.8	Matrix-Valued Functional Equations .....	155
9.8.1	Main Results: Functional Equations of $\tilde{A}_{\lambda, \nu, \varepsilon}^{i, j}$ .....	156
9.8.2	Proof of Functional Equations .....	156
9.9	Renormalized Symmetry Breaking Operator $\tilde{A}_{\lambda, \nu, +}^{i, j}$ .....	159
9.9.1	Functional Equations for the Renormalized Operator $\tilde{A}_{\lambda, i, +}^{i, i}$ .....	159
9.9.2	Functional Equations at Middle Degree for $n$ Even .....	160
9.9.3	Functional Equations for the Renormalized Operator $\tilde{A}_{\lambda, n-i, +}^{i, i-1}$ .....	162
9.9.4	Functional Equations at Middle Degree for $n$ Odd .....	162
9.10	Restriction Map $I_{\delta}(i, \lambda) \rightarrow J_{\delta}(i, \lambda)$ .....	163
9.11	Image of the Differential Symmetry Breaking Operator $\tilde{C}_{\lambda, \nu}^{i, j}$ .....	164
9.11.1	Surjectivity Condition of $\tilde{C}_{\lambda, \nu}^{i, j}$ .....	165
9.11.2	Functional Equation for $\tilde{C}_{\lambda, \nu}^{i, j}$ .....	166
9.11.3	The Case When $\tilde{T}_{\nu, n-1-\nu}^j = 0$ .....	168
9.11.4	Proof of Theorems 9.33 and 9.34 .....	169
<b>10</b>	<b>Symmetry Breaking Operators for Irreducible Representations with Infinitesimal Character <math>\rho</math>: Proof of Theorems 4.1 and 4.2 .....</b>	<b>171</b>
10.1	Proof of the Vanishing Result (Theorem 4.1) .....	171
10.2	Construction of Symmetry Breaking Operators from $\Pi_{i, \delta}$ to $\pi_{i, \delta}$ : Proof of Theorem 4.2 .....	173
10.2.1	Generators of Symmetry Breaking Operators Between Principal Series Representations Having the Trivial Infinitesimal Character $\rho$ .....	173
10.2.2	Multiplicity-free Property of Symmetry Breaking .....	175
10.2.3	Multiplicity-one Property: Proof of Theorem 4.2 .....	175
10.2.4	First Construction $\Pi_{i, \delta} \rightarrow \pi_{i, \delta}$ ( $1 \leq i \leq n$ ) .....	177
10.2.5	Second Construction $\Pi_{i, \delta} \rightarrow \pi_{i, \delta}$ ( $0 \leq i \leq n - 1$ ) .....	178
10.2.6	Third Construction $\Pi_{i, \delta} \rightarrow \pi_{i, \delta}$ .....	179
10.3	Splitting of $I_{\delta}(m, m)$ and Its Symmetry Breaking for $(G, G') = (O(2m + 1, 1), O(2m, 1))$ .....	180
10.3.1	$\text{Hom}_{G'}(I_{\delta}(m, m) _{G'}, J_{\varepsilon}(m, m))$ with $\delta\varepsilon = +$ .....	181
10.3.2	$\text{Hom}_{G'}(I_{\delta}(m, m) _{G'}, J_{\varepsilon}(m, m))$ with $\delta\varepsilon = -$ .....	183
10.4	Splitting of $J_{\varepsilon}(m, m)$ and Symmetry Breaking Operators for $(G, G') = (O(2m + 2, 1), O(2m + 1, 1))$ .....	184
10.4.1	$\text{Hom}_{G'}(I_{\delta}(m + 1, m) _{G'}, J_{\delta}(m, m))$ for $n = 2m + 1$ .....	185
10.4.2	$\text{Hom}_{G'}(I_{-\varepsilon}(m, m) _{G'}, J_{\varepsilon}(m, m))$ for $n = 2m + 1$ .....	188
10.5	Symmetry Breaking Operators from $\Pi_{i, \delta}$ to $\pi_{i-1, \delta}$ .....	188

<b>11</b>	<b>Application I: Some Conjectures by B. Gross and D. Prasad: Restrictions of Tempered Representations of <math>SO(n+1, 1)</math> to <math>SO(n, 1)</math></b> .....	193
11.1	Vogan Packets of Tempered Induced Representations .....	193
11.2	Vogan Packets of Discrete Series Representations with Integral Infinitesimal Character of $SO(2m, 1)$ .....	195
11.3	Embedding the Group $\overline{G'} = SO(n-2p, 2p+1)$ into the Group $\overline{G} = SO(n-2p+1, 2p+1)$ .....	195
11.4	The Gross–Prasad Conjecture I: Tempered Principal Series Representations .....	196
11.5	The Gross–Prasad Conjecture II: Tempered Representations with Trivial Infinitesimal Character $\rho$ .....	200
11.5.1	The Gross–Prasad Conjecture II: Symmetry Breaking from $\overline{\Pi}_{m, (-1)^{m+1}}$ to the Discrete Series Representation $\overline{\pi}_m$ .....	201
11.5.2	The Gross–Prasad Conjecture II: Symmetry Breaking from the Discrete Series Representation $\pi_m$ to $\varpi_{m-1, (-1)^m}$ .....	202
<b>12</b>	<b>Application II: Periods, Distinguished Representations and <math>(\mathfrak{g}, K)</math>-cohomologies</b> .....	207
12.1	Periods and $O(n, 1)$ -distinguished Representations .....	207
12.1.1	Periods .....	207
12.1.2	Distinguished Representations .....	209
12.1.3	Symmetry Breaking Operators from $\Pi_{i, \delta}$ to $\pi_{j, \delta}$ ( $j \in \{i-1, i\}$ ) .....	210
12.2	Proofs of Theorems 12.4 and 12.5 .....	210
12.3	Bilinear Forms on $(\mathfrak{g}, K)$ -cohomologies via Symmetry Breaking: General Theory for Nonvanishing .....	212
12.3.1	Pull-back of $(\mathfrak{g}, K)$ -cohomologies via Symmetry Breaking .....	213
12.3.2	Nonvanishing of Pull-back of $(\mathfrak{g}, K)$ -cohomologies of $A_q$ via Symmetry Breaking ...	214
12.4	Nonvanishing Bilinear Forms on $(\mathfrak{g}, K)$ -cohomologies via Symmetry Breaking for $(G, G') = (O(n+1, 1), O(n, 1))$ .....	216
12.4.1	Nonvanishing Theorem for $O(n+1, 1) \downarrow O(n, 1)$ .....	216
12.4.2	Special Cycles .....	219

<b>13</b>	<b>A Conjecture: Symmetry Breaking for Irreducible Representations with Regular Integral Infinitesimal Character</b> .....	223
13.1	Hasse Sequences and Standard Sequences of Irreducible Representations with Regular Integral Infinitesimal Character and Their Langlands Parameters.....	223
13.1.1	Definition of Hasse Sequence and Standard Sequence.....	223
13.1.2	Existence of Hasse Sequence .....	225
13.1.3	Langlands Parameter of the Representations in the Hasse Sequence .....	226
13.2	The Conjecture .....	232
13.2.1	Conjecture: Version 1 .....	232
13.2.2	Conjecture: Version 2 .....	233
13.3	Supporting Evidence.....	235
13.3.1	Evidence E.1.....	236
13.3.2	Evidence E.2.....	236
13.3.3	Evidence E.3.....	237
13.3.4	Evidence E.4.....	239
<b>14</b>	<b>Appendix I: Irreducible Representations of <math>G = O(n + 1, 1)</math>, <math>\theta</math>-stable Parameters, and Cohomological Induction</b> .....	251
14.1	Finite-dimensional Representations of $O(N - 1, 1)$ .....	251
14.2	Singular Parameters for $V \in \widehat{O}(n)$ : $S(V)$ and $S_Y(V)$ .....	256
14.2.1	Infinitesimal Character $r(V, \lambda)$ of $I_\delta(V, \lambda)$ .....	257
14.2.2	Singular Integral Parameter: $S(V)$ and $S_Y(V)$ .....	259
14.3	Irreducibility Condition of $I_\delta(V, \lambda)$ .....	260
14.4	Subquotients of $I_\delta(V, \lambda)$ .....	262
14.4.1	Subquotients of $I_\delta(V, \lambda)$ for $V$ of Type X .....	262
14.4.2	Subrepresentations of $I_\delta(V, \frac{n}{2})$ for $V$ of Type Y .....	262
14.4.3	Socle Filtration of $I_\delta(V, \lambda)$ .....	263
14.5	Definition of the Height $i(V, \lambda)$ .....	263
14.6	$K$ -type Formulæ of Irreducible $G$ -modules .....	267
14.6.1	$K$ -type Formula of $I_\delta(V, \lambda)$ .....	267
14.6.2	$K$ -types of Subquotients $I_\delta(V, \lambda)^\flat$ and $I_\delta(V, \lambda)^\sharp$ .....	268
14.7	$(\delta, V, \lambda) \rightsquigarrow (\delta^\uparrow, V^\uparrow, \lambda^\uparrow)$ and $(\delta^\downarrow, V^\downarrow, \lambda^\downarrow)$ .....	270
14.8	Classification of Irreducible Admissible Representations of $G = O(n + 1, 1)$ .....	273
14.8.1	Characterizations of the Irreducible Subquotients $\Pi_\delta(V, \lambda)$ .....	273
14.8.2	Classification of $\text{Irr}(G)$ .....	275
14.9	$\theta$ -stable Parameters and Cohomological Parabolic Induction ....	275
14.9.1	Cohomological Parabolic Induction $A_{\mathfrak{q}}(\lambda) = \mathcal{R}_{\mathfrak{q}}^S(\mathbb{C}_{\lambda + \rho(u)})$ .....	275
14.9.2	$\theta$ -stable Parabolic Subalgebra $\mathfrak{q}_i$ for $G = O(n + 1, 1)$ .....	277

14.9.3	Irreducible Representations $\Pi_{\ell, \delta}$ and $(A_{q_i})_{\pm, \pm}$ .....	281
14.9.4	Irreducible Representations with Nonzero ( $\mathfrak{g}, K$ )-cohomologies .....	282
14.9.5	Description of Subquotients in $I_\delta(V, \lambda)$ .....	283
14.9.6	Proof of Theorem 14.46 .....	284
14.10	Hasse Sequence in Terms of $\theta$ -stable Parameters .....	285
14.11	Singular Integral Case .....	286
<b>15</b>	<b>Appendix II: Restriction to <math>\overline{G} = SO(n+1, 1)</math> .....</b>	<b>289</b>
15.1	Restriction of Representations of $G = O(n+1, 1)$ to $\overline{G} = SO(n+1, 1)$ .....	289
15.2	Restriction of Principal Series Representation of $G = O(n+1, 1)$ to $\overline{G} = SO(n+1, 1)$ .....	291
15.2.1	Restriction $I_\delta(V, \lambda) _{\overline{G}}$ When $I_\delta(V, \lambda)$ Is Irreducible ....	292
15.2.2	Restriction $I_\delta(V, \lambda) _{\overline{G}}$ When $V$ Is of Type Y .....	293
15.3	Proof of Theorem 14.15: Irreducibility Criterion of $I_\delta(V, \lambda)$ .....	295
15.4	Socle Filtration of $I_\delta(V, \lambda)$ : Proof of Proposition 14.19 .....	296
15.5	Restriction of $\Pi_{\ell, \delta}$ to $SO(n+1, 1)$ .....	298
15.6	Symmetry Breaking for Tempered Principal Series Representations .....	300
15.7	Symmetry Breaking from $\overline{I}_\delta(i, \lambda)$ to $\overline{J}_\varepsilon(j, \nu)$ .....	302
15.8	Symmetry Breaking Between Irreducible Representations of $\overline{G}$ and $\overline{G}'$ with Trivial Infinitesimal Character $\rho$ .....	306
<b>16</b>	<b>Appendix III: A Translation Functor for <math>G = O(n+1, 1)</math> .....</b>	<b>307</b>
16.1	Some Features of Translation Functors for Reductive Groups that Are Not of Harish-Chandra Class .....	307
16.2	Translation Functor for $G = O(n+1, 1)$ .....	308
16.2.1	Primary Decomposition of Admissible Smooth Representations .....	308
16.2.2	Translation Functor $\psi_\mu^{\mu+\tau}$ for $G = O(n+1, 1)$ .....	309
16.2.3	The Translation Functor and the Restriction $G \downarrow \overline{G}$ .....	310
16.2.4	Some Elementary Properties of the Translation Functor $\psi_\mu^{\mu+\tau}$ .....	311
16.3	Translation of Principal Series Representation $I_\delta(V, \lambda)$ .....	311
16.3.1	Main Results: Translation of Principal Series Representations .....	311
16.3.2	Strategy of the Proof for Theorems 16.6 and 16.8 .....	313
16.3.3	Basic Lemmas for the Translation Functor .....	313
16.4	Definition of an Irreducible Finite-dimensional Representation $F(V, \lambda)$ of $G = O(n+1, 1)$ .....	315
16.4.1	Definition of $\sigma^{(i)}(\lambda)$ and $\widehat{\sigma}^{(i)}$ .....	316
16.4.2	Definition of a Finite-dimensional Representation $F(V, \lambda)$ of $G$ .....	317
16.4.3	Reformulation of Theorems 16.6 and 16.8 .....	319

16.4.4	Translation of Irreducible Representations $\Pi_{\ell,\delta}$ .....	320
16.4.5	Proof of Theorems 16.22 and 16.23 .....	320
16.5	Proof of Proposition 16.9 .....	322
16.5.1	Irreducible Summands for $O(n+2) \downarrow O(n) \times O(2)$ and for Tensor Product Representations .....	322
16.5.2	Irreducible Summand for the Restriction $G \downarrow MA$ and for Tensor Product Representations .....	325
16.5.3	Proof of Proposition 16.9 .....	327
16.6	Proof of Theorem 16.6.....	327
16.6.1	Case: $(V, \lambda) \in \mathcal{Red}_I$ .....	328
16.6.2	Case: $(V, \lambda) \in \mathcal{Red}_{II}$ .....	328
16.7	Proof of Theorem 16.8.....	330
<b>References</b> .....		333
<b>List of Symbols</b> .....		337
<b>Index</b> .....		341
