Nomenclature 5

Abstract..... 7

1. Preface and Objectives..... 10

2. Introduction to blast furnace phenomena..... 12

 2.1. Blast furnace zones 12

 2.1.1. Top zone..... 12

 2.1.2. Lumpy zone 12

 2.1.3. Cohesive zone (CZ)..... 12

 2.1.4. Lower part of blast furnace..... 16

 2.2. The phenomena in the dripping zone (DZ) 21

 2.2.1. The physical flow behavior in DZ 21

 2.3. Review of the multiphase flow behavior 36

 2.3.1. Flooding phenomena in DZ..... 36

 2.3.2. Experimental studies of the multiphase flows and flooding
 phenomena in DZ..... 43

 2.3.3. Simulation of multiphase flows and flooding phenomena in DZ... 48

3. Simulation methodology and modeling..... 60

 3.1. The simulation models of multiphase flows in DZ based on the CFD
 method 60

 3.2. The simulation models of multiphase flows in DZ based on the DEM
 method 63

 3.3. The geometry, initial and boundary conditions of small-scale DZ model.
 64

 3.4. The governing equations for the small-scale model. 72

Table of Contents

3.5. Introduction to COMSOL Multiphysics® software.....	74
4. Modeling results and discussion.....	77
4.1. The flowability and flow behavior of multiphase flows in DZ.....	77
4.1.1. The effect of coke bed voidage.....	80
4.1.2. The effect of coke-bed pattern.....	89
4.1.3. The effect of circularity of coke shape (Shape factor).....	91
4.1.4. The effect of pressure drop through packed beds ($\Delta p/H$).....	93
4.1.5. The effect of slag viscosity.....	96
4.1.6 The effect of injected coal powder.....	102
4.2 The prediction of DZ productivity.....	109
5. Conclusions.....	116
6. Outlook.....	119
References.....	121
Appendix A.....	125
Appendix B.....	126
Appendix C.....	135
Appendix D.....	136
Appendix E.....	144
Appendix F.....	145
Appendix G.....	146
Curriculum vitae.....	156
